Objective and Investment Policy

The Lyxor Dow Jones Industrial Average UCITS ETF - Dist is a UCITS compliant exchange traded fund that aims to track the benchmark index Dow Jones Industrial Average Net Total Return.

Risk & Reward Profile (SRRRI) (Source: Fund Admin)

Lower risk, potentially lower rewards
Higher risk, potentially higher rewards

The SRRRI represents the risk and return profile as presented in the Key Investor Information Document (KIID). The lowest category does not imply that there is no risk. The SRRRI is not guaranteed and may change over time.

It is important for potential investors to evaluate the risks described below and in the fund prospectus which can be found on www.amundietf.com

CAPITAL AT RISK : ETFs are tracking instruments: Their risk profile is similar to a direct investment in the Underlying Index. Investors' capital is fully at risk and investors may not get back the amount originally invested.

REPLICATION RISK : The fund objectives might not be reached due to unexpected events on the underlying markets which will impact the index calculation and the efficient fund replication.

COUNTERPARTY RISK : Investors are exposed to risks resulting from the use of an OTC Swap with MORGAN STANLEY BANK AG , SOCIETE GENERALE. In-line with UCITS guidelines, the exposure to the counterparty cannot exceed 10% of the total fund assets. Physically replicated ETFs may have counterparty risk resulting from the use of a Securities Lending Programme.

UNDERLYING RISK : The Underlying Index of a Amundi ETF may be complex and volatile. When investing in commodities, the Underlying Index is calculated with reference to commodity futures contracts exposing the investor to a liquidity risk linked to costs such as cost of carry and transportation. ETFs exposed to Emerging Markets carry a greater risk of potential loss than investment in Developed Markets as they are exposed to a wide range of unpredictable Emerging Market risks.

CURRENCY RISK : ETFs may be exposed to currency risk if the ETF is denominated in a currency different to that of the Underlying Index they are tracking. This means that exchange rate fluctuations could have a negative or positive effect on returns.

LIQUIDITY RISK : Liquidity is provided by registered market-makers on the respective stock exchange where the ETF is listed. On-exchange liquidity may be limited as a result of a suspension in the underlying market represented by the Underlying Index tracked by the ETF; a failure in the systems of one of the relevant stock exchanges, The market-maker systems; or an abnormal trading situation or event.

Performances related to distributing ETF are calculated reinvesting dividends into the ETF performance

* Source : Amundi. The above cover complete periods of 12 months for each calendar year. **Past performance is no predictor of current and future results and does not guarantee future yield** . Any losses or gains do not take into consideration any costs, commissions and fees incurred by the investor in the issue and buyout of the shares (e.g. taxes, brokerage fees or other commissions deducted by the financial intermediary). If performance is calculated in a currency other than the euro, any losses or gains generated can thereby be affected by exchange rate fluctuations (both upward and downward). The discrepancy accounts for the performance difference between the portfolio and the index.

Index Data (Source : Amundi)

Description of the Index

The Dow Jones Industrial Average Net Total Return represents large and well-known U.S. companies, covering all industries with the exception of Transportation and Utilities. The Dow Jones Industrial Average is a price-weighted index. The Dow Jones Industrial Average is an index based on the values of 30 securities of large American companies. It is calculated using a mathematical average of the stock prices of the 30 securities. The capitalisation of the shares included in the Dow Jones Industrial Average represents approximately 20% of the capitalisation of American equities. The index is price weighted.

The attention of investors is drawn to the fact that, the prospectus is only available in English.

Units of a specific UCITS ETF managed by an asset manager and purchased on the secondary market cannot usually be sold directly back to the asset manager itself. Investors must buy and sell units on a secondary market with the assistance of an intermediary (e.g. a stockbroker) and may incur fees for doing so. In addition, investors may pay more than the current net asset value when buying units and may receive less than the current net asset value when selling them.

Updated composition of the product's investment portfolio is available on www.amundiETF.com. In addition, the indicative net asset value is published on the Reuters and Bloomberg pages of the product, and might also be mentioned on the websites of the stock exchanges where the product is listed.

There is no guarantee that the fund's objective will be met. The fund may not always be able to replicate exactly the performance of the index (or indices).

This product includes a risk of capital loss. The redemption value of this product may be less than the amount initially invested. In a worst case scenario, investors could sustain the loss of their entire investment.
