Objective and Investment Policy

The Fund is a passively managed index-based UCITS. The Fund's objective is to replicate, both upwards and downwards, the performance of the TOPIX® Gross Total Return Index (gross dividends reinvested) (the "Benchmark"), denominated in Japanese yen (JPY) and representative of all Japanese shares listed in the first section of the Tokyo Stock Exchange, while minimising the tracking error between the performance of the Fund and that of the Benchmark. The expected level of the Tracking Error under normal market conditions is indicated in the Fund prospectus. The Japan Exchange Group website (www.jpx.co.jp/english/) contains more detailed information about the Japan Exchange Group indices. The Fund aims to achieve its objective through direct replication, namely by investing primarily in the components of the Benchmark. In order to optimise Benchmark replication, the Fund may use a sampling technique, as well as guaranteed temporary sales of securities. Any use of these techniques is indicated on the website amundietf.com. The updated composition of the portfolio of securities held by the Fund is mentioned on the website amundietf.com. In addition, the indicative net asset value appears on the Fund's Reuters and Bloomberg pages and may also be mentioned on the Fund's stock exchange websites. In order to hedge the currency risk of the share class against that of the Index, the Sub-fund uses a hedging strategy that reduces the impact of variations between the Index currency and the share class currency.
