Source of data: BNP Paribas Asset Management, as at 30.10.2026
The above mentioned securities are for illustrative purpose only and do not constitute any investment recommendation.
The data as shown in the factsheets are based on official accounting data and are based on trade date.

ESG (ENVIRONMENTAL, SOCIAL AND GOVERNANCE) Score goes from 0 (worst) to 99 (best)

BNPP AM's internal ESG scoring methodology determines an issuer's ESG score by evaluating performance vs. scoring peers on a narrow set of key ESG issues related to the environment (e.g. climate change), social issues (e.g. human resources management) and governance (e.g. independence and competence of directors).

BNPP AM uses numerous research inputs and data sources (e.g. Sustainalytics, ISS & Trucost) to determine issuers' ESG scores. If the issuer's commitments and practices on a pillar of assessment (E, S or G) are better than scoring peers, it will receive a positive 'contribution' for this pillar.

Each issuer is assigned a final score from 0 to 99 which is the result of 50 as a reference plus the sum of the contributions from each of the three pillars.

Sustainability

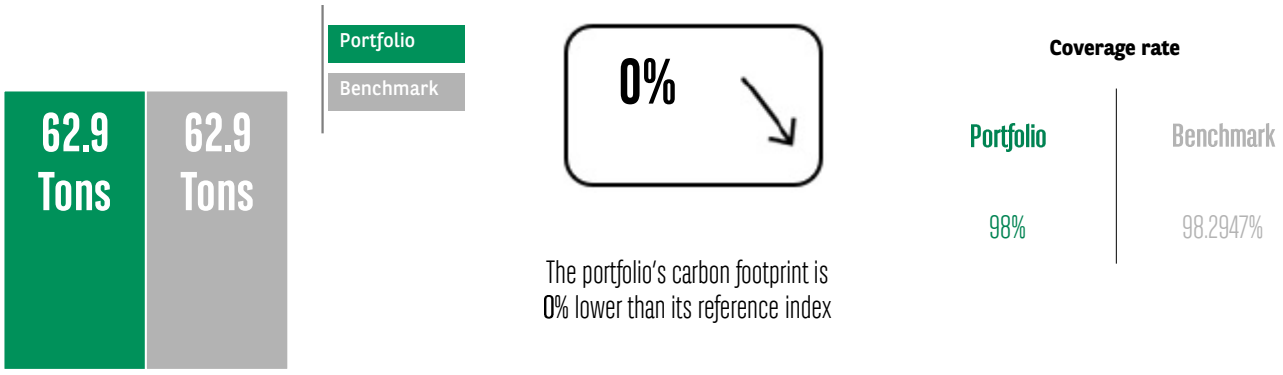

ESG Score

	Neutral Score	Environmental Contribution (E)	Social Contribution (S)	Governance Contribution (G)	ESG global score	Coverage rate
Portfolio	50	2.79	3.48	2.34	58.61	99%
Benchmark	50	2.79	3.48	2.35	58.62	99%

Score goes from 0 (worst) to 99 (best)

Carbon footprint (tCO2eq/M€ Entreprise Value)

This section provides the aggregated calculation of the carbon footprint of all investment in the portfolio.
This indicator assesses the carbon footprint expressed in tCO2eq / million € of Enterprise Value Including Cash, EVIC.
Source: BNPP AM, Carbon Disclosure Project (CDP), Bloomberg, Trucost and Factset (EVIC)

For every €1 million invested into the fund, the gap in carbon footprint between the portfolio & its benchmark is equivalent to:

Source: EV Life Cycle Assessment Calculator – Data Tools from International Energy Agency, as of June 2024, Emissions for a medium size vehicle

Source: Greenhouse Gas Equivalencies Calculator from US Environmental Protection Agency, based on 2023 Annual Energy Outlook, US Home electricity use

Sustainability

ESG Contribution

The ESG contributions are determined by BNP Paribas Asset Management's ESG analysts on the basis of detailed criteria to systematically evaluate companies' commitments, performance and practices in the areas of environmental, social and governance. Each of the above contributions at the portfolio level, is the weighted average of the contributions of the individual portfolio holdings.Environmental Contribution (E) takes into account, among other things, climate change, environmental risk management, and the use of natural resources. Social Contribution (S) takes into account, among other things, human capital management, the quality of social dialogue, and the respect of diversity. Governance Contribution (G) takes into account, among other things, the transparency on executive compensation, the fight against corruption, and gender equality.

Carbon footprint

The portfolio carbon footprint is the weighted sum of the ratios of the carbon emissions of companies to their respective Enterprise Value Including Cash. The sum is weighted by the weight of each company in the portfolio. Carbon emissions are the sum of Scope 1 and 2 emissions. The footprint is expressed in tonnes of CO2 equivalent per year per million euros of Entreprise Value. CDP, Bloomberg, and Trucost are our data providers for carbon emissions.

Portfolio Coverage

The coverage represents, within a portfolio or benchmark or ESG benchmark, the percentage of securities that have an ESG score or carbon footprint within those that are eligible to have an ESG score or carbon footprint using BNPP AM's internal methodology. Non-eligible securities include, but are not limited to cash, external funds.

For more information on ESG indicators, please refer to BNPP AM's webpage : https://www.bnpparibas-am.com/en/esg-scoring-framework/ & https://www.bnpparibas-am.com/en/measuring-carbon-footprints/
For more detailed information on our sustainability documents, please refer to BNPP AM's webpage : https://www.bnpparibas-am.com/en/sustainability-documents/

RISK

Risk Indicator

The risk and reward indicator for this fund is:

Lower risk typically=lower reward **Higher risk typically=higher reward**
1: lowest risk ; **7**: highest risk ; SRRI: Synthetic Risk and Reward Indicator. The higher the risk, the longer the investment horizon is recommended

Risk Analysis (Since inception)	**Fund**
Volatility	8.61
Ex-post Tracking Error	0.06
Information Ratio	-0.65
Sharpe Ratio	2.26
Alpha	-0.03
Beta	1.00
R^2	1.00

The investments in the funds are subject to market fluctuations and the risks inherent in investments in securities. The value of investments and the income they generate may go down as well as up and it is possible that investors will not recover their initial outlay, the fund described being at risk of capital loss.

Why is the Fund in this specific category?

The risk category is justified by the investment mainly in Stocks and Shares, the value of which can fluctuate considerably. These fluctuations are often amplified in the short term.

GLOSSARY

Alpha
Alpha is an indicator used to measure the value added by an active portfolio manager relative to a passive exposure to a benchmark. A positive alpha expresses an outperformance whereas a negative alpha indicates an underperformance. A simple way to calculate alpha is to subtract a portfolio's expected return (based on the benchmark's performance adjusted with the beta of the portfolio, see Beta definition for further details). For instance, an alpha of 0.50 means that the portfolio outperformed the market-based return (benchmark's performance adjusted from the Beta exposure of the portfolio) by 0.50%.

Beta
Beta is a measure of portfolio market risk, the market being represented by financial indices (such as MSCI World) that are consistent with the portfolio's guidelines. It measures the sensitivity of portfolio performance to the performance of the market. For example a beta of 1.5 means the portfolio will move by 1.5% for a market performance of 1%. Mathematically, it is the correlation between the portfolio and the market multiplied by their ratio of volatilities.

Information Ratio
The information ratio is a risk-adjusted return that measures the relationship between the portfolio's tracking error and its relative return compared with the benchmark index (called active return).

R^2
The Correlation Coefficient indicates the strength and direction of a linear relationship between fund performance and benchmark. The coefficient is an element of [-1,1], where 1 equals a perfectly correlated increasing linear relationship, -1 equals a perfectly correlated decreasing linear relationship, and 0 means that there is no linear correlation.

Sharpe Ratio
A measure for calculating risk-adjusted return. It indicates the return earned in excess of the risk-free rate per unit of risk. It is calculated by dividing the difference between the return and the risk-free rate by the standard deviation of the return on the investment. The Sharpe ratio indicates whether the excess return was obtained thanks to good investment management or by taking additional risk. The higher the ratio, the better the risk-adjusted return.

Tracking Error
The tracking error measures the volatility of a portfolio's relative return in relation to its benchmark index.

Volatility
An asset's volatility is the standard deviation of its return. As a measure of dispersion, it evaluates the uncertainty of asset prices, which is often equated to their risk. Volatility can be calculated ex post (retrospectively) or estimated ex ante (anticipatively).
