The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also

be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in

currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the MSCI World Net Total Return Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least

one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility. The Fund is not designed for investors who need current income.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.[1]

SFDR Disclosure

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold.**

[1] The Fund currently follows a fund of funds investment approach and can invest principally in UCITS or other investment funds that are eligible for investment by a UCITS as set out in the Prospectus and this Supplement. The Manager therefore relies on data provided by the investment managers of the Underlying Fund investments when calculating the minimum percentage proportion of sustainable investment of the Fund and when calculating the percentages required in the section of Annex II dealing with the planned asset allocation of the Fund.

Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk and the Paris Aligned Benchmark Exclusions (the "PAB Exclusions").

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.
Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	19 October 2020 – 10 November 2020	Euro	No	Up to 2%	€1,000 / €100	Accumulating
Class D Acc	€100	19 October 2020 – 10 November 2020	Euro	No	No	€500 / €100	Accumulating

During the Initial Offer Period, Shares are available for subscription at the Initial Offer Price, as indicated directly above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to the following management fee of the Net Asset Value of each Class of Shares:

Management Fee (% of NAV) of each Share Class	
During the Subscription Period	Up to 0.20%
After the Subscription Period up to the end of year 1	Up to 1.5%
After the end of year 1 up to the end of year 2	Up to 2.5%
After the end of year 2	Up to 2.5%

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first two years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Sales Charge
Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding, in which case, in order to avoid double charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FAM SUSTAINABLE TARGET 2022 III
Legal entity identifier: 254900I8V2AOYZ7IYD73

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective: ___%**	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 51% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective: ___%**	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The environmental and/or social characteristics of this product include:

a. **Minimum investment in funds falling within the meaning of Article 8 and 9 of the SFDR**
The Fund will invest a minimum of 90% in underlying funds classified as falling within the meaning of either Article 8 and/or Article 9 under SFDR, which means, that at a minimum, the majority of the underlying funds which the Fund holds promote

environmental and social characteristics while investing in companies which follow good governance practices.

b. Positive Screening

Consideration of environmental, social and governance ("ESG factors") are a key element of portfolio construction/fund selection. Portfolio managers will take a holistic approach which includes the analysis of ESG factors as part of their overall risk adjusted valuation assessment. This supports the overall promotion of investment in funds which the Manager deems desirable on ESG grounds. By incorporating positive ESG factors as part of the overall portfolio construction/fund selection, the Fund through its investments supports a tilt towards investment in underlying funds that have a more positive impact on the environment or society at large.

c. Fund Level ESG Scoring

A monthly independent analysis and classification of the Fund's ESG score is performed internally by the Manager. A minimum ESG scoring threshold is applied at Fund level to ensure that the Fund's ESG score does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control serves to highlight a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers on ESG topics.

d. Negative Screening (Norm-based exclusions)

For any potential direct holdings the Manager applies its basic exclusions (the "**Basic Exclusions**") as well as the PAB Exclusions in accordance with its Exclusion Policy. The Manager wants its funds under management to avoid making any investments which the Manager or its clients might deem incompatible with minimum responsible investing principles. To align the Fund's investments with this sustainable investment approach, Manager have adopted a firm wide exclusion policy which screens all investments for their compliance with minimum international standards and norms, from which an Exclusion List is derived..

Those exclusions currently include:

a. Issuers that breach the principles of the United Nations Global Compact;
b. Issuers involved in the manufacture or product life cycle of controversial weapons including biological and chemical weapons, cluster munitions and sub-munitions, depleted uranium, landmines including antipersonnel mine and nuclear weapons);
c. Issuers involved in the cultivation and production of tobacco
d. Issuers that derive 1% or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;
e. Issuers that derive 10% or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;
f. Issuers that derive 50% or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;
g. Issuers that derive 50% or more of their revenues from electricity generation with a GHF intensity of more than 100g C02 e/kWh
h. Issuers that contravene the United Nations Global Company labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards

The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy and the PAB Exclusions.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted.

- ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Fund uses the following indicator;

i. The percentage of the Fund portfolio made in sustainable investments;

ii. the percentage of the Fund's underlying fund holdings rated A by MSCI ESG Manager (or an other corresponding rating from a similar rating provider).

- ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments that the Fund intends to make is to promote environmental and/or social characteristics. On the basis that the Fund is currently following a fund of funds investment approach, the objectives of the sustainable investments that the Fund partially intends to make is linked to the sustainable investments made by the underlying funds. The Fund will seek to make investments in underlying funds that commit/partially commit to invest in sustainable investments and who have a process for ensuring that their sustainable investments are:

a. Made in investee companies that demonstrate good governance;

b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

c. Made in investee companies that make a positive contribution towards an environmental or social objective. The Fund may allocate between underlying funds which make sustainable investments of any type, i.e. investments with an environmental, and/or a social objective. The Fund is not required to favour any specific type of sustainable investment.

- ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective based on the policies adopted by the relevant underlying fund investment managers. These policies are considered as part of the Manager's initial and ongoing investment due diligence procedures and are assessed for alignment with the indicators set out in Table 1 and any relevant additional indicator from Tables 2 and 3 of Annex I of the Delegated Regulation and the approach taken by the Manager.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Principal adverse impact ("PAI") indicators are calculated at both the Fund level and the underlying fund level. The results will be compared with that of a chosen proxy benchmark representative of the Fund's investment universe and/or peers. These calculations will be used as the basis of assessment of adverse impacts on sustainability factors in order to determine whether the Manager can improve at Fund level and/or where Manager can engage with underlying fund investment managers to improve at the underlying fund level. For example, Manager may engage on disclosure if a certain metric is materially misaligned with that of the chosen proxy and/or peers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments which the Fund makes in the underlying funds and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are assessed in the following ways;

1. Via PAI monitoring of the following indicators;

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

2. Through engagement with the underlying fund investment managers to ensure that the sustainable investments that the underlying funds makes are:

    a. Made in investee companies that demonstrate good governance:

    b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

    c. Made in investee companies that make a positive contribution towards an environmental or social objective.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

☒ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the Fund portfolio against mandatory and additional PAI indicators. Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report. The PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

☐ No

What investment strategy does this financial product follow?

The Fund is structured as a Fund giving a return to investors at the Maturity Date. The Fund is organised in a manner that it has two separate investment objectives for different time periods in the Fund's life, as set out below. Please refer to the supplement to the Prospectus titled "FAM Sustainable Target 2022 III" (the "Supplement") for definitions of "Maturity Date" and "Subscription Period".

1. During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund. The Manager will seek to achieve this objective by investing principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

2. Following the Subscription Period the investment objective of the Fund is to achieve medium to long-term capital appreciation. The Fund seeks to achieve this objective in the following manner:

- By reducing the Fund's allocation to Initial Strategies on a monthly basis ("Averaging Out").
- Every month the Fund will complete the Averaging Out process and the exposure to the Initial Strategies will be reduced and an exposure will be obtained to Underlying Funds as described in detail in the Supplement (the "Longer Term Strategies").

As part of the Longer Term Strategies the Fund, the Fund may invest up to 100% of the Fund's assets in underlying funds that provide exposure to equities issued by companies incorporated anywhere in the world, and which take account of a number of ESG factors.

Although the Fund does not have a specific sustainable investment objective, the Fund will pursue an investment strategy that seeks to identify the best investment opportunities by integrating financial analysis with environmental, social responsibility and governance considerations. In order to meet such extra-financial characteristics, the target funds or the assets held directly by the Fund are assessed as related to sustainable and social criteria and where applicable, they must have an explicit commitment to responsible investing as per their investment process.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The ESG rating of each instrument held by the Fund should be reflected in an assessment, and ultimately in the decision on whether to invest in such instrument. The Fund will invest, directly or indirectly through open-ended UCIs and UCITS, in instruments that have better social or environmental ratings and/or are issued by issuers with better social or environmental practices. For example as stated above, the Fund currently intends to invest a minimum of 90% in other funds classified as either Article 8 and/or Article 9 under SFDR, which means, that at a minimum, the majority of the underlying funds which the Fund holds promote environmental and social characterisictics while investing in companies which follow good governance practices.

The Manager also maintains due diligence processes to assess the ESG commitments of underlying investments and underlying fund managers. To this end, the Manager, reviews and assesses on a periodic basis private and public information related to each issuer and/or relevant underlying fund manager, as applicable, and its ESG rating or characteristics. In addition to such assessment, the Manager will obtain from each issuer (and/or the relevant underlying fund manager, as the case may be), which has been selected for investment by the Fund, any information necessary to assess the ESG rating or characteristics of the relevant underlying investment.

For any direct investment (i.e. non-underying fund investments), companies that are in breach of UN Global Compact principles (along with certain other Exclusion criteris) are excluded from the investment universe of the Fund as defined by the Manager. Where an investment is deemed inappropriate, no further investment may be made in the instrument, however existing holdings may be retained for a period of time to facilitate orderly divestment. For investment in underlying funds, exclusions of the underying fund manager are assessed as part of the initial and ongoing due diligence process.

For any direct investment (i.e. non-underying fund investments), the Manager recognises and adheres to the principle of responsible stewardship via sustainable proxy voting and collective enagement initiatives as a way of promoting good ESG policies.

The elements of the investment strategy to attain of the environmental or social characteristics promoted by this financial product as described above are systematically integrated throughout the investment process

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

  a. **Minimum investment in funds falling within the meaning of Article 8 and Article 9 of the SFDR**
  The Fund will invest a minimum of 90% in other funds classified as falling within the meaning of either Article 8 and/or Article 9 under the SFDR.

  b. **Minimum underlying fund score**
  80% of the Fund's underlying fund holdings will be rated A by MSCI ESG Manager (or an other corresponding rating from a similar rating provider). If the Sustainable Finance Committee of the Manager determines that the underlying fund in question has mitigating reasons for its MSCI ESG score to have fallen below A, the underlying fund holding may be maintained within the Fund portfolio.

  c. **Exclusion Policy**
  For any direct holdings (i.e. non-underying fund investments), the Manager's Exclusion Policy applies, and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

  Not applicable

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

- ***What is the policy to assess good governance practices of the investee companies?***

  Good governance is assessed for underlying funds through engagement with the underlying fund manager via due diligence.

  In addition, ensuring that a minimum of 90% of the portfolio is invested in funds falling within the meaning of Article 8 or Article 9 of the SFDR, demonstrates that the Manager is limiting the Fund's investment universe of underlying funds to focus on those investment

funds that must only invest in investee companies that demonstrate good governance practices (in compliance with SFDR).

In addition, direct holdings (i.e. non-underlying fund investments) in the Fund must have a minimum rating of BB according to MSCI ESG Manager (or an other corresponding rating from a similar rating provider). This ensures a level of good governance vis a vis the above scores. Limited exceptions to this rule may apply.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments means the products Net Asset Value which is the total market value of the product.

At least 90% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund. The Financial product also comments to a minimum proportion of 51% in sustainable investments. The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

The asset allocation may change over time and percentages may be updated in this appendix from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate underlying fund manager data and/or company or third-party data.

***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**

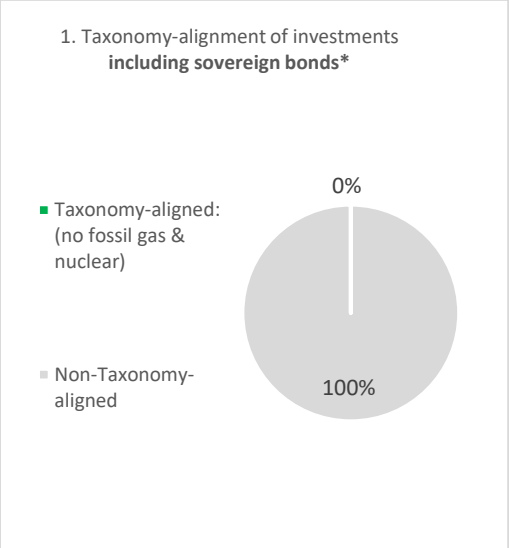
Derivatives are not used to attain the environmental or social characteristics promoted by this Fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

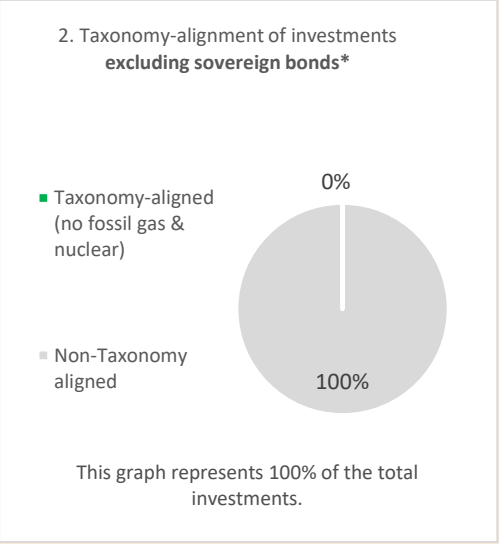
As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities are** activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy1?



Yes:

In fossil gas In nuclear energy

No X

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

What is the minimum share of investments in transitional and enabling activities? 0%.

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

51%%*.

What is the minimum share of socially sustainable investments?

51%%*.

*The Fund commits to invest at least 51% of its assets in sustainable investments. Within this overall commitment, there is no prioritisation of environmental and/or social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and

social objectives by allowing the Manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the Managers Exclusion Policy.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Responsible Investment Policy, summary investment process and Exclusion Policy can be found on the Manager's website at the following link: FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)

FAM MEGATRENDS TARGET VI

SUPPLEMENT DATED 30 JUNE 2025

This Supplement contains specific information in relation to **FAM MegaTrends Target VI** the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset- management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 1 December 2022 and each addendum thereto (together the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. An investment in the Fund involves certain investment risks, including the possible loss of principal. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Subscription Period	The original Subscription Period closed in 2022 (the **Original Subscription Period**). The subsequent Subscription Period means the 60 calendar days from 1 July 2025 to 1 September 2025 or such longer or shorter period, as may be determined by the Directors and on a quarterly basis thereafter at the discretion of the Directors and once notified in advance to Shareholders. Shares will be available for subscription during this time, at the prevailing Net Asset Value (NAV) per Share.

Investment Objective and Policies

The investment objective of the Fund is to achieve long-term capital appreciation.

The Fund:

I. may invest up to 100% of the Fund's assets in Underlying Funds that provide exposure to equities issued by companies operating in sectors and geographical regions that benefit from ongoing global megatrends.

Global megatrends ("Megatrends") are generally defined as global forces of development that create fundamental shifts in the progress of society thus impacting business, the economy, culture and the way we live. Examples of Megatrends that are currently reshaping our world are: demographic and social changes, climate change and resource scarcity, technological breakthroughs and rapid urbanization. Megatrends evolve independently of the economic cycle and, thus, possess the capacity to continuously redraw the financial landscape. By underpinning these Megatrends, it is possible to identify investment sub-themes which act as both drivers and beneficiaries of these Megatrends.

A summary of some of the sub-themes of the abovementioned Megatrends prevalent in the world today are listed below. Potential Shareholders should be aware that the below listed headings are examples of certain sub-themes of Megatrends and are for illustrative purposes only. It is important for potential Shareholders to note that what constitutes a

Megatrend sub-theme today may not be classed as such in the future. This is not intended to be an exhaustive list and these sub-themes have the ability to change over time. Therefore, the Fund does not commit to definitively invest in each or all of these Megatrend sub-themes at any time:

- Ageing Population: The ageing of the world's population is widely considered one of the most enduring demographic shifts in human history. Companies which have a focus on improving developments in healthcare, developments in Biotechnology and shifting consumer trends leading to a longer life expectancy are in a position to benefit greatly from this trend;
- Oncology: With cancer diagnoses expected to increase in the next 20 years, companies which are committing capital to cancer research to develop better diagnostics to cure cancer are in a position to benefit from developments in the treatment of cancer;
- Water: Population growth, urbanization and water-intensive dietary changes are adding to rising industrial water demand. Companies at the forefront of new technologies required to accommodate increasing global demand for water are well placed to benefit from this trend;
- Electric & Autonomous Vehicles: With a shift away from internal combustion engine vehicles and movement toward the broad usage of autonomous vehicles, manufacturers of both electric and autonomous vehicles as well as their components and other companies in the supply chain all stand to be beneficiaries from this trend; and
- Drones: Extensive growth in consumer and commercial drone usage means that companies involved in the production of these technologies will benefit from this evolving trend.

II. may invest up to 20% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate;

III. may invest up to 20% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and

At any time, the Fund may only have a maximum exposure of 30%, either directly or through Underlying Funds, to non-Investment Grade debt securities.

Selection of Underlying Funds

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which make up the Initial Strategies and the Longer Term Strategies.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in money market instruments, equity and debt securities' markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve

a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds being managed by the Manager.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on the Recognised Markets.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in alternative investment funds ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility

swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific

maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the MSCI World Net Total Return Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility. The Fund is not designed for investors who need current income.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.[1]

SFDR Disclosure

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of the SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

[1] The Fund currently follows a fund of funds investment approach and can invest principally in UCITS or other investment funds that are eligible for investment by a UCITS as set out in the Prospectus and this Supplement. The Manager therefore relies on data provided by the investment managers of the Underlying Fund investments when calculating the minimum percentage proportion of sustainable investment of the Fund and when calculating the percentages required in the section of Annex II dealing with the planned asset allocation of the Fund.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	Closed	Euro	No	Up to 2%	€1,000 / €100	Accumulating
Class D Acc	€100	Closed	Euro	No	No	€500 / €100	Accumulating

During the Initial Offer Period, Shares are available for subscription at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses
Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to the following management fee of the Net Asset Value of each Class of Shares:

Management Fee (% of NAV) for each Share Class	
During the Original Subscription Period	Up to 0.20%
After the Original Subscription Period up to the end of year 1	Up to 1.50%
After the end of year 1 up to the end of year 2	Up to 2.50%
After the end of year 2	Up to 2.50%

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding, in which case, in order to avoid double charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first two years of the Fund's operation (or such other period as may be determined by the Directors at their discretion).

Risk Factors

The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FAM MEGATRENDS TARGET VI
Legal entity identifier: 254900L4O63J4Y631H71

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective: ___%**	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 15% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	with a social objective
☐ It will make a minimum of **sustainable investments with a social objective: ___%**	It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The environmental and/or social characteristics of this product include:

a. Minimum investment in funds in scope of Article 8 and 9 of the SFDR

The Fund will invest a minimum of 90% in Underlying Funds which fall within the meaning of either Article 8 or Article 9 of the SFDR, which means, that at a minimum, the majority of the Underlying Funds which the Fund holds promote environmental and social characteristics while investing in companies which follow good governance practices.

b. Positive Screening

Consideration of ESG factors are a key element of portfolio construction/fund selection. Portfolio managers will take a holistic approach which includes the analysis of ESG factors as part of their overall risk adjusted valuation assessment. This supports the overall promotion of investment in funds which the Manager deems desirable on ESG grounds. By incorporating positive ESG factors as part of the overall portfolio construction/fund selection, the Fund through its investments supports a tilt towards investment in Underlying Funds that have a more positive impact on the environment or society at large.

c. Fund Level ESG Scoring

A monthly independent analysis and classification of the Fund's ESG score is performed internally by the Manager. A minimum ESG scoring threshold is applied at Fund Level to ensure that the Fund's ESG score does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control serves to highlight a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers on ESG topics.

d. Negative Screening (Norm-based exclusions)

For any potential direct holdings the Manager applies norms-based exclusions based on its Exclusion Policy. The Manager wants its funds under management to avoid making any investments which the Manager or its clients might deem incompatible with minimum responsible investing principles. To align the Fund's investments with this sustainable investment approach, Manager have adopted a firm wide exclusion policy which screens all investments for their compliance with minimum international standards and norms, from which an Exclusion List is derived..

Exclusion categories considered in the Exclusion Policy are:

- United Nations Global Compact Principles
- Controversial Weapons
- Tobacco
- Climate Change
- Forced Labour

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Fund uses the following indicator;

i. The percentage of the Fund portfolio made in sustainable investments;

ii. the percentage of the Fund's Underlying Fund holdings rated A or above by MSCI ESG Manager (or another corresponding rating from a similar rating provider).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments that the Fund intends to make is to promote environmental and/or social characteristics. On the basis that the Fund is currently following

a fund of funds investment approach, the objectives of the sustainable investments that the Fund partially intends to make is linked to the sustainable investments made by the Underlying Funds. The Fund will seek to make investments in Underlying Funds that commit/partially commit to invest in sustainable investments and who have a process for ensuring that their sustainable investments are:

a. Made in investee companies that demonstrate good governance;

b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

c. Made in investee companies that make a positive contribution towards an environmental or social objective. The Fund may allocate between Underlying Funds which make sustainable investments of any type, i.e. investments with an environmental, and/or a social objective. The Fund is not required to favour any specific type of sustainable investment.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective based on the policies adopted by the relevant Underlying Fund investment managers. These policies are considered as part of the Manager's initial and ongoing investment due diligence procedures and are assessed for alignment with the indicators set out in Table 1 and any relevant additional indicator from Tables 2 and 3 of Annex I of the Delegated Regulation.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Principal adverse impact ("PAI") indicators are calculated at both the Fund level and the Underlying Fund level. The results will be compared with that of a chosen proxy benchmark representative of the Fund's investment universe and/or peers. These calculations will be used as the basis of assessment of adverse impacts on sustainability factors in order to determine whether the Manager can improve at Fund level and/or where Manager can engage with Underlying Fund investment managers to improve at the Underlying Fund level. For example, Manager may engage on disclosure if a certain metric is materially misaligned with that of the chosen proxy and/or peers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments which the Fund makes in the Underlying Funds and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are assessed in the following ways;

1. Via PAI monitoring of the following indicators;

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

2. Through engagement with the Underlying Fund investment managers to ensure that the sustainable investments that the Underlying Funds makes are:

a. Made in investee companies that demonstrate good governance:

b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

c. Made in investee companies that make a positive contribution towards an environmental or social objective.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the Fund portfolio against mandatory and additional PAI indicators. Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report. The PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

☐ No

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

The investment objective of the Fund is to achieve long-term capital appreciation. The

Fund may invest up to 100% of the Fund's assets in Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world, and which take account of a number of ESG factors, as further described in the Supplement.

Although the Fund does not have a specific sustainable investment objective, the Manager has fully integrated the ESG Policy into the overall investment process, in particular, the portfolio construction process.

As part of the process to undertake appropriate due diligence on investments, the Manager will generally conduct a level of research on each Underlying Fund which will give the Investment Manager an understanding of the investments underpinning same. This includes a quantitative and qualitative assessment as detailed in the "Investment Objective and Policies" section of the Supplement which involves scrutiny relating to each

Underlying Fund's approach to ESG factors and consideration of Sustainability Risks.

The Manager integrates these ESG factors and this Sustainability Risk assessment into its investment research process and its risk management process – both initially and on an ongoing basis for the duration of the period the Fund holds an investment or pursues a particular investment strategy.

For investment in Underlying Funds, exclusions of the Underying Fund manager are assessed as part of the initial and ongoing due diligence process.

For any direct investment (i.e. non-underying fund investments), companies that are in breach of UN Global Compact principles (along with certain other Exclusion criteris) are excluded from the investment universe of the Fund as defined by the Manager. Where an investment is deemed inappropriate, no further investment may be made in the instrument, however existing holdings may be retained for a period of time to facilitate orderly divestment. For investment in underlying funds, exclusions of the underying fund manager are assessed as part of the initial and ongoing due diligence process.

For any direct investment (i.e. non-underying fund investments), the Manager recognises and adheres to the principle of responsible stewardship via sustainable proxy voting and collective enagement initiatives as a way of promoting good ESG policies.

The elements of the investment strategy to attain of the environmental or social characteristics promoted by this financial product as described above are systematically integrated throughout the investment process.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

Asset allocation describes the share of investments in

a. Minimum investment in funds in scope of Article 8 and Article 9 SFDR
The Fund will invest a minimum of 90% in other funds which fall within the meaning of either Article 8 and/or Article 9 of the SFDR.

b. Minimum Underlying Fund score
80% of the Fund's Underlying Fund holdings will be rated A by MSCI ESG Manager (or an other corresponding rating from a similar rating provider). If the Sustainable Finance Committee of the Manager determines that the Underlying Fund in question has mitigating reasons for its MSCI ESG score to have fallen below A, the Underlying Fund holding may be maintained within the Fund portfolio.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU

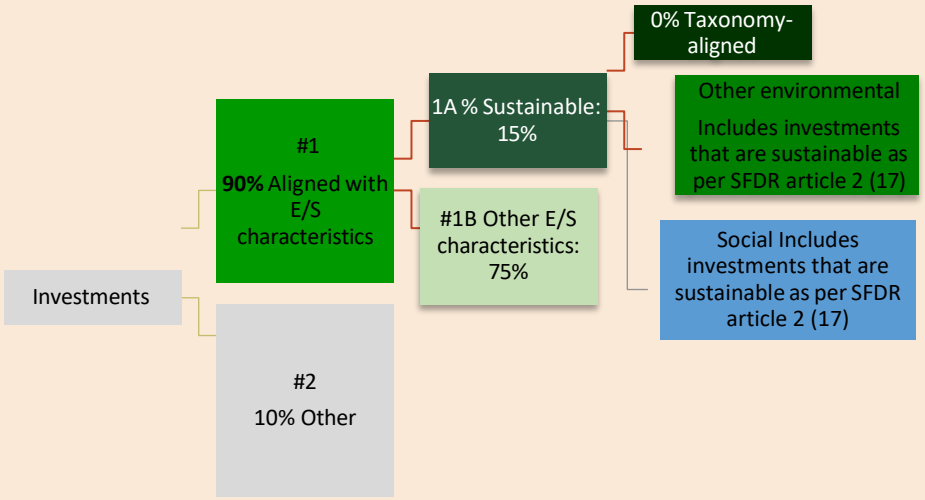
c. Exclusion Policy
For any direct holdings (i.e. non-underying fund investments), the Manager's Exclusion Policy applies, and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

Not applicable

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.



Good governance is assessed for Underlying Funds through engagement with the Underlying Fund manager via due diligence.

In addition, ensuring that a minimum of 90% of the portfolio is invested in funds which fall within the meaning of Article 8 or 9 of the SFDR, demonstrates that the Manager is limiting the Fund's investment universe of Underlying Funds to focus on those investment funds that must only invest in investee companies that demonstrate good governance practices (in compliance with SFDR).

What is the asset allocation planned for this financial product?

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments means the Fund's Net Asset Value which is the total market value of the product.

At least 80% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund. The Financial product also comments to a minimum proportion of 15% in sustainable investments. The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

The asset allocation may change over time and percentages may be updated in this appendix from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate underlying fund manager data and/or company or third-party data.

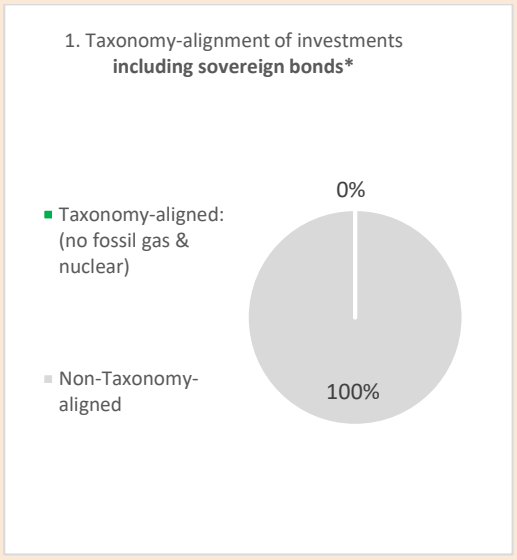
- ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**
  Derivatives are not used to attain the environmental or social characteristics promoted by this Fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

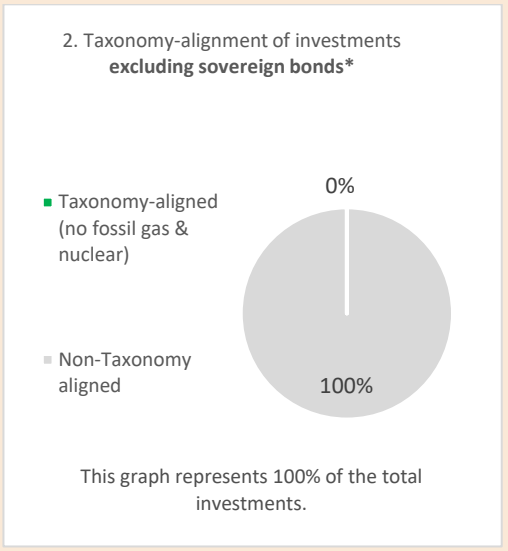
As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities are** activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[1]?



Yes:

In fossil gas In nuclear energy

No X

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What is the minimum share of investments in transitional and enabling activities? 0%.

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

15%*.

What is the minimum share of socially sustainable investments?

15%*

*The Fund commits to invest at least 15% of its assets in sustainable investments. Within this overall commitment, there is no prioritisation of environmental and/or social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

social objectives by allowing the Manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the managers exclusion policy.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Fund, including the Responsible Investment Policy and Exclusion Policy can be found on the Manager's website at the following link FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)

FINECO AM ADVISORY 6 TARGET VII

SUPPLEMENT DATED 30 JUNE 2025

This Supplement contains specific information in relation to **FINECO AM ADVISORY 6 TARGET VII** (the "Fund"), a sub- fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 01 December 2022 and each addendum thereto (together the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. An investment in the Fund involves certain investment risks, including the possible loss of principal. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Subscription Period	The original Subscription Period closed in 2021 (the Original Subscription Period). The subsequent Subscription Period means the 60 calendar days from 1 July 2025 to 1 September 2025 or such longer or shorter period, as may be determined by the Directors and on a quarterly basis thereafter at the discretion of the Directors and once notified in advance to Shareholders. Shares will be available for subscription during this time, at the prevailing Net Asset Value (NAV) per Share.

Investment Objective and Policies

The investment objective of the Fund is to achieve long- term capital appreciation.

The Fund:

(1) may invest up to 60% of its Net Asset Value in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world;

(2) may invest up to 70% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate;

(3) may invest up to 25% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets), hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and

(4) may invest up to 30% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

At any time, the Fund may only have a maximum exposure of 30%, either directly or through Underlying Funds, to non-Investment Grade debt securities.

The Fund may also invest up to 10% of its Net Asset Value in exchange traded commodities ("ETCs") being instruments that give investors indirect exposure to commodities in the form of certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movement of commodities - such as oil, gold and silver or a basket of commodities - and fluctuate in value based on the underlying commodity(ies).

Selection of Underlying Funds

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers, as follows:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Fund also being managed by the Manager.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in alternative investment funds ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees

that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR)

approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to a benchmark composed of 60% of Bloomberg Euro Aggregate Bond Index and 40% MSCI ACWI Net Total Return EUR Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility. The Fund is not designed for investors who need current income.

SFDR Classification: Article 6 Fund.

SFDR Disclosure
The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	Closed	Euro	No	Up to 2%	€1,000 / €100	Accumulating
Class D Acc	€100	Closed	Euro	No	No	€500 / €100	Accumulating

*Class D Shares in the Fund shall only be made available for subscription to such entities or persons as the Manager may determine from time to time in its absolute discretion.

During the initial offer period, Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading “Fees and Expenses”.

Manager’s Fee
The Manager shall be entitled to the following management fee of the Net Asset Value of each Class of Shares.

Management Fee (% of NAV) for each Share Class	
During the Original Subscription Period	Up to 0.20%
After the Original Subscription Period up to the end of year 1	Up to 1.50%
After the end of year 1 up to the end of year 2	Up to 2.50%
After the end of year 2	Up to 2.50%

Administrator’s Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary’s Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding, in which case, in order to avoid double charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000, will be borne by the Fund and amortised over the first two years of the Fund's operation (or such other period as may be determined by the Directors at their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

FAM MEGATRENDS TARGET 2026
SUPPLEMENT DATED 7th July 2023

This Supplement contains specific information in relation to **FAM MegaTrends Target 2026** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. An investment in the Fund involves certain investment risks, including the possible loss of principal. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Maturity Date	12 January 2026
Subscription Period	means the 60 calendar days following the end of the Initial Offer Period or such longer or shorter period, as may be determined by the Directors in accordance with the requirements of the Central Bank.

Investment Objective and Policies

The Fund is being structured as a Fund giving a return to investors at the Maturity Date. The Fund is organised in a manner that it has two separate investment objectives for different time periods in the Fund's life as follows, and as explained in detail in each sub-section below:

1. **During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund; and**

2. **Following the Subscription Period, the investment objective of the Fund is to achieve long-term capital appreciation**.

As stated above, the main investment objective of the Fund is as set out in (2) above and in the section headed "After the Subscription Period and up to the Maturity Date". The reason for having a Subscription Period is to have a short 60 day time period during which the Fund will accept subscriptions and invest them in a manner designed to seek to achieve a positive investment return whilst maintaining liquidity for the Fund. After the Subscription Period, subscriptions into the Fund are no longer accepted. Although the Fund will be closed for subscriptions after the Subscription Period, requests for redemptions received prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day (i.e. each Business Day) in accordance with the section of the Prospectus entitled **"**Redemption of Shares".

During the Subscription Period
During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund. The Manager will seek to achieve this objective by investing principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's

acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

Investment in the Initial Strategies will be selected on the basis that will result in the Fund having a weighted average interest rate duration of no longer than 4.5 years.

Selection of debt instruments

The debt instruments that may be part of the Initial Strategies will selected based on the Manager's top-down analysis, which includes a view on the global investment outlook and analysis of market opportunities and securities based on an assessment of factors such as income yield, credit risk and bond duration. The Manager's will assess each individual bond and the bond markets to understand the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the bonds under assessment. Following such credit assessment, the Manager appraises a potential investment in a bond in terms of relative value when compared to other bonds that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which bonds to acquire on behalf of the Fund. When an investment in a bond is made, it will be closely monitored by the Manager taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such bond will be kept under review by the Manager. The Manager may invest substantially or fully in government bonds issued by any Member State.

After the Subscription Period and up to the Maturity Date

Following the Subscription Period, the investment objective of the Fund is to achieve long-term capital appreciation.

The Fund seeks to achieve this objective in the following manner:

1. By reducing the Fund's allocation to Initial Strategies on a monthly basis ("Averaging Out").

   For example, it is anticipated that following the last day of the Subscription Period and on a monthly basis, the Fund's asset allocation to Initial Strategies will reduce on average by 1.72% of the Fund's assets.

   The Manager, based on their discretion, can alter the above monthly amount by accelerating the reduction to the Initial Strategies according to their view of market conditions. The Manager's view on market conditions will be informed by a proprietary quantitative model designed by the Manager which is described below (the "Quant Model"). Each monthly reduction will be followed by a corresponding investment by the Fund in the Longer Term Strategies (described at point 2 below). This Averaging Out will continue every month up to the Maturity Date.

   The Manager will run the Quant Model in order to analyse market conditions which will inform them as to how much they should accelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies.

   This proprietary Quant Model allows the Manager to assess market conditions using quantifiable, definitive and numerical data that can be used for checking portfolio return robustness via historical simulations; i.e. it is analysis on documented and definitive information on the past performance of the relevant market. The Quant Model will be based on technical and market indicators such as the relative strength index which analyses the historical strength or weakness of a stock or market based on closing prices of a recent trading period. The analysis produced by the Quant Model allows the Manager to take advantage of favourable market conditions when assessing whether or not to increase the Averaging Out amount above 1.72% a month. Favourable market conditions in this context mean conditions that, once the Manager has run the Quant Model and assessed the resulting data and market indicators arising from the running of the Quant Model, indicate to the Manager that it is favourable for the Manager to accelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies at a favourable price.

   The Averaging Out process will occur every month, following the last day of the Subscription Period, for approximately 58 months up to the Maturity Date. At the Maturity Date the Fund will be fully invested in the Longer Term Strategies. The gradual exposure of Shareholders to the Longer Term Strategies

allows Shareholders to obtain a diversified exposure to the market while neutralizing the effect of short-term price fluctuations in the broader market. In addition, the Quant Model gives Manager the discretion to take advantage of favourable market conditions (described above) in respect of potentially accelerating Shareholders exposure to the Longer Term Strategies.

2. As described above, every month the Fund will complete the Averaging Out process and the exposure to the Initial Strategies will be reduced and an exposure will be obtained to Underlying Funds as described in detail immediately below (the "Longer Term Strategies"). As part of the Longer Term Strategies the Fund:

    I. may invest principally in Underlying Funds that have a primary focus on providing exposure to equities issued by companies operating in sectors and geographical regions that benefit from ongoing global megatrends.

    Global megatrends ("Megatrends") are generally defined as global forces of development that create fundamental shifts in the progress of society thus impacting business, the economy, culture and the way we live. Examples of Megatrends that are reshaping our world currently are demographic and social changes, climate change and resource scarcity, technological breakthroughs and rapid urbanization. Megatrends evolve independently of the economic cycle and thus possess the capacity to continuously redraw the financial landscape. Underpinning these Megatrends, it is possible to identify investment sub-themes which act as both drivers and beneficiaries of these Megatrends.

    A summary of some of the sub-themes of the abovementioned Megatrends prevalent in the world today are listed below. Potential Shareholders should be aware that the below headings listed 1-5 are examples of certain sub-themes of Megatrends and are for illustrative purposes only. It is important for potential Shareholders to note that what constitutes a Megatrend sub-theme today may not be classed as such in the future. This is not intended to be an exhaustive list and these sub-themes have the ability to change over time. Therefore, the Fund does not commit to definitively invest in each or all of these Megatrend sub-themes at any time:

    - Ageing Population: The ageing of the world's population is widely considered one of the most enduring demographic shifts in human history. Companies which have a focus on improving developments in healthcare, developments in BioTechnology and shifting consumer trends leading to a longer life expectancy are in a position to benefit greatly from this trend;
    - Oncology: With cancer diagnoses expected to increase in the next 20 years, companies which are committing capital to cancer research to develop better diagnostics to cure cancer are in a position to benefit from developments in the treatment of cancer;
    - Water: Population growth, urbanization and water-intensive dietary changes are adding to rising industrial water demand. Companies at the forefront of new technologies required to accommodate increasing global demand for water are well placed to benefit from this trend;
    - Electric & Autonomous Vehicles: With a shift away from internal combustion engine vehicles and movement toward the broad usage of autonomous vehicles, manufacturers of both electric and autonomous vehicles as well as their components and other companies in the supply chain all stand to be beneficiaries from this trend; and
    - Drones: Extensive growth in consumer and commercial drone usage means that companies involved in the production of these technologies will benefit from this evolving trend.

    II. may invest up to 20% of its Net Asset Value in units of Underlying Funds managed with absolute return investment strategies. These strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. These strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements; and

III. may invest up to 20% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate.

At any time, the Fund may only have a maximum exposure of 30%, either directly or through Underlying Funds, to non-Investment Grade debt securities.

Selection of Underlying Funds

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which make up the Initial Strategies and the Longer Term Strategies.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in instruments that make up the Initial Strategies and Longer Term Strategies, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers, as follows:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and
- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Fund also being managed by the Manager.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested "alternative investment funds" ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the

United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices

in order provide an efficient, liquid and effective method for the management of risks by “locking in” gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund’s bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond’s portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund’s investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies (“FX Forwards”) to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund’s overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager’s view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps (“IRS”)

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager’s view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the MSCI World Net Total Return Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility. The Fund is not designed for investors who need current income.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.[1]

[1] The Fund currently follows a fund of funds investment approach and can invest principally in UCITS or other investment funds that are eligible for investment by a UCITS as set out in the Prospectus and this Supplement. The Manager therefore relies on data provided by the investment managers of the Underlying Fund investments when calculating the minimum percentage proportion of sustainable investment of the Fund and when calculating the percentages required in the section of Annex II dealing with the planned asset allocation of the Fund.

SFDR Disclosure

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of the SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	18 December 2020 – 12 January 2021	Euro	No	Up to 2%	€1,000 / €100	Accumulating
Class D Acc	€100	18 December 2020 – 12 January 2021	Euro	No	No	€500 / €100	Accumulating

During the Initial Offer Period, Shares are available for subscription at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to the following management fee of the Net Asset Value of each Class of Shares.

Management Fee (% of NAV) for each Share Class	
During the Subscription Period	Up to 0.20%
After the Subscription Period up to the end of year 1	Up to 1%
After the end of year 1 up to the end of year 2	Up to 1.4%
After the end of year 2 up to the end of year 3	Up to 1.75%
After the end of year 3 up to the end of year 4	Up to 2.10%
After the end of year 4	Up to 2.55%

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding, in which case, in order to avoid double charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors at their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FAM MEGATRENDS TARGET 2026
Legal entity identifier: 254900Q1DQ0LPY28UG31

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective: ___%**	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 5% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective: ___%**	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The environmental and/or social characteristics of this product include:

a. Minimum investment in funds in scope of Article 8 and 9 of the SFDR

The Fund will invest a minimum of 90% in Underlying Funds which fall within the meaning of either Article 8 or Article 9 of the SFDR, which means, that at a minimum, the majority of the Underlying Funds which the Fund holds promote environmental and social characteristics while investing in companies which follow good governance practices.

b. Positive Screening

Consideration of ESG factors are a key element of portfolio construction/fund selection. Portfolio managers will take a holistic approach which includes the analysis of ESG factors as part of their overall risk adjusted valuation assessment. This supports the overall promotion of investment in funds which the Manager deems desirable on ESG grounds. By incorporating positive ESG factors as part of the overall portfolio construction/fund selection, the Fund through its investments supports a tilt towards investment in Underlying Funds that have a more positive impact on the environment or society at large.

c. Fund Level ESG Scoring

A monthly independent analysis and classification of the Fund's ESG score is performed internally by the Manager. A minimum ESG scoring threshold is applied at Fund Level to ensure that the Fund's ESG score does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control serves to highlight a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers on ESG topics.

d. Negative Screening (Norm-based exclusions)

For any potential direct holdings the Manager applies norms-based exclusions based on its Exclusion Policy. The Manager wants its funds under management to avoid making any investments which the Manager or its clients might deem incompatible with minimum responsible investing principles. To align the Fund's investments with this sustainable investment approach, Manager have adopted a firm wide exclusion policy which screens all investments for their compliance with minimum international standards and norms, from which an Exclusion List is derived..

Exclusion categories considered in the Exclusion Policy are:

- United Nations Global Compact Principles
- Controversial Weapons
- Tobacco
- Climate Change
- Forced Labour

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Fund uses the following indicator;

i. The percentage of the Fund portfolio made in sustainable investments;

ii. the percentage of the Fund's Underlying Fund holdings rated A or above by MSCI ESG Manager (or another corresponding rating from a similar rating provider).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments that the Fund intends to make is to promote environmental and/or social characteristics. On the basis that the Fund is currently following

a fund of funds investment approach, the objectives of the sustainable investments that the Fund partially intends to make is linked to the sustainable investments made by the Underlying Funds. The Fund will seek to make investments in Underlying Funds that commit/partially commit to invest in sustainable investments and who have a process for ensuring that their sustainable investments are:

a. Made in investee companies that demonstrate good governance;

b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

c. Made in investee companies that make a positive contribution towards an environmental or social objective. The Fund may allocate between Underlying Funds which make sustainable investments of any type, i.e. investments with an environmental, and/or a social objective. The Fund is not required to favour any specific type of sustainable investment.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective based on the policies adopted by the relevant Underlying Fund investment managers. These policies are considered as part of the Manager's initial and ongoing investment due diligence procedures and are assessed for alignment with the indicators set out in Table 1 and any relevant additional indicator from Tables 2 and 3 of Annex I of the Delegated Regulation.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Principal adverse impact ("PAI") indicators are calculated at both the Fund level and the Underlying Fund level. The results will be compared with that of a chosen proxy benchmark representative of the Fund's investment universe and/or peers. These calculations will be used as the basis of assessment of adverse impacts on sustainability factors in order to determine whether the Manager can improve at Fund level and/or where Manager can engage with Underlying Fund investment managers to improve at the Underlying Fund level. For example, Manager may engage on disclosure if a certain metric is materially misaligned with that of the chosen proxy and/or peers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments which the Fund makes in the Underlying Funds and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are assessed in the following ways;

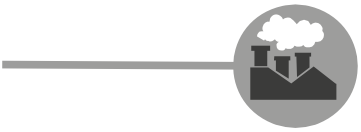
1. Via PAI monitoring of the following indicators;

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

2. Through engagement with the Underlying Fund investment managers to ensure that the sustainable investments that the Underlying Funds makes are:

a. Made in investee companies that demonstrate good governance:



b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

c. Made in investee companies that make a positive contribution towards an environmental or social objective.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the Fund portfolio against mandatory and additional PAI indicators. Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report. The PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

☐ No

What investment strategy does this financial product follow?

The Fund is being structured as a Fund giving a return to investors at the Maturity Date. The Fund is organised in a manner that it has two separate investment objectives for different time periods in the Fund's life, as set out below. Please refer to the supplement to the Prospectus titled "FAM Megatrends Target 2026" (the "Supplement") for definitions of "Maturity Date" and "Subscription Period".

1. During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund. The Manager will seek to achieve this objective by investing principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-

coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

2. Following the Subscription Period, the investment objective of the Fund is to achieve long-term capital appreciation. The Fund seeks to achieve this investment objective in the following manner, as further set out in the Supplement:

    - By reducing the Fund's allocation to Initial Strategies on a monthly basis ("Averaging Out").

    - Every month the Fund will complete the Averaging Out process and the exposure to the Initial Strategies will be reduced and an exposure will be obtained to Underlying Funds as described in detail in the Supplement (the "Longer Term Strategies").

As part of the Longer Term Strategies, the Fund may invest principally in Underlying Funds that have a primary focus on providing exposure to equities issued by companies operating in sectors and geographical regions that benefit from ongoing global megatrends, as further described in the Supplement.

Although the Fund does not have a specific sustainable investment objective, the Manager has fully integrated the ESG Policy into the overall investment process, in particular, the portfolio construction process.

As part of the process to undertake appropriate due diligence on investments, the Manager will generally conduct a level of research on each Underlying Fund which will give the Investment Manager an understanding of the investments underpinning same. This includes a quantitative and qualitative assessment as detailed in the "Investment Objective and Policies" section of the Supplement which involves scrutiny relating to each Underlying Fund's approach to ESG factors and consideration of Sustainability Risks.

The Manager integrates these ESG factors and this Sustainability Risk assessment into its investment research process and its risk management process – both initially and on an ongoing basis for the duration of the period the Fund holds an investment or pursues a particular investment strategy.

For investment in Underlying Funds, exclusions of the Underying Fund manager are assessed as part of the initial and ongoing due diligence process.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

For any direct investment (i.e. non-underying fund investments), companies that are in breach of UN Global Compact principles (along with certain other Exclusion criteris) are excluded from the investment universe of the Fund as defined by the Manager. Where an investment is deemed inappropriate, no further investment may be made in the instrument, however existing holdings may be retained for a period of time to facilitate orderly divestment. For investment in underlying funds, exclusions of the underying fund manager are assessed as part of the initial and ongoing due diligence process.

For any direct investment (i.e. non-underying fund investments), the Manager recognises and adheres to the principle of responsible stewardship via sustainable proxy voting and collective enagement initiatives as a way of promoting good ESG policies.

The elements of the investment strategy to attain of the environmental or social characteristics promoted by this financial product as described above are systematically integrated throughout the investment process

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

  a. **Minimum investment in funds in scope of Article 8 and Article 9 SFDR**
  The Fund will invest a minimum of 90% in other funds which fall within the meaning of either Article 8 and/or Article 9 of the SFDR.

  b. **Minimum Underlying Fund score**
  80% of the Fund's Underlying Fund holdings will be rated A by MSCI ESG Manager (or an other corresponding rating from a similar rating provider). If the Sustainable Finance Committee of the Manager determines that the Underlying Fund in question has mitigating reasons for its MSCI ESG score to have fallen below A, the Underlying Fund holding may be maintained within the Fund portfolio.

  c. **Exclusion Policy**
  For any direct holdings (i.e. non-underying fund investments), the Manager's Exclusion Policy applies, and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

  Not applicable

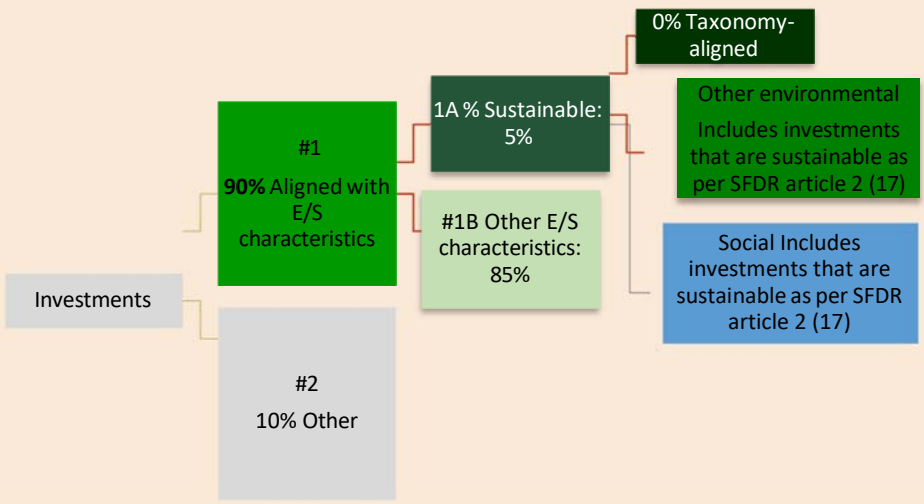
- ***What is the policy to assess good governance practices of the investee companies?***

  Good governance is assessed for Underlying Funds through engagement with the Underlying Fund manager via due diligence.

  In addition, ensuring that a minimum of 90% of the portfolio is invested in funds which fall within the meaning of Article 8 or 9 of the SFDR, demonstrates that the Manager is limiting the Fund's investment universe of Underlying Funds to focus on those investment funds that must only invest in investee companies that demonstrate good governance practices (in compliance with SFDR).

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the asset allocation planned for this financial product?



Asset allocation describes the share of investments in

Taxonomy-aligned activities are expressed as a

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU

by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments means the Fund's Net Asset Value which is the total market value of the product.

At least 80% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund. The Financial product also comments to a minimum proportion of 5% in sustainable investments. The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

The asset allocation may change over time and percentages may be updated in this appendix from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate underlying fund manager data and/or company or third-party data.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are not used to attain the environmental or social characteristics promoted by this Fund.

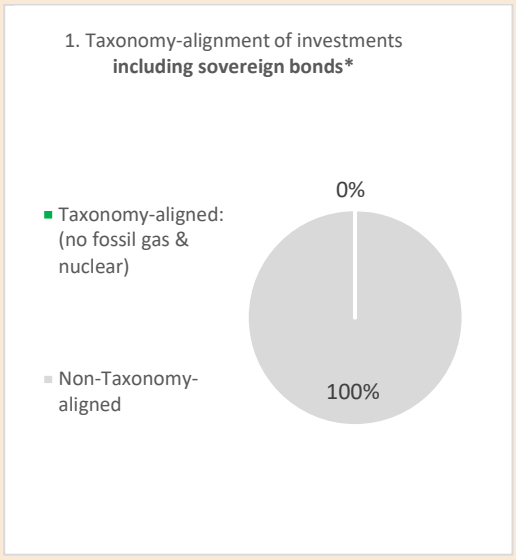
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy

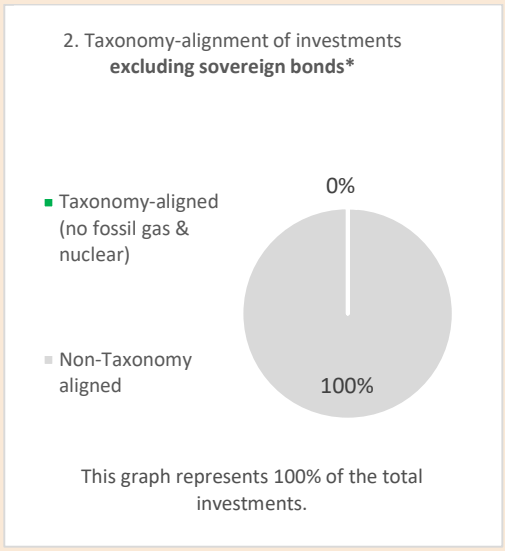
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities are** activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the best performance.

Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[1]?



Yes:

In fossil gas In nuclear energy

No: X

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

What is the minimum share of investments in transitional and enabling activities? 0%.

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

5%*.

What is the minimum share of socially sustainable investments?

5%*

*The Fund commits to invest at least 5% of its assets in sustainable investments. Within this

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

overall commitment, there is no prioritisation of environmental and/or social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the Manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the managers exclusion policy.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Responsible Investment Policy, summary investment process and Exclusion Policy can be found on the Manager's website at the following link FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)

FAM SUSTAINABLE TARGET 2023

SUPPLEMENT DATED 21 MAY 2025

This Supplement contains specific information in relation to **FAM Sustainable Target 2023** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. An investment in the Fund involves certain investment risks, including the possible loss of principal. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Maturity Date	12 January 2023
Subscription Period	means the 60 calendar days following the end of Initial Offer Period or such longer or shorter period, as may be determined by the Directors in accordance with the requirements of the Central Bank.

Investment Objective and Policies

The Fund is being structured as a Fund giving a return to investors at the Maturity Date. The Fund is organised in a manner that it has two separate investment objectives for different time periods in the Fund's life as follows, and as explained in detail in each sub-section below:

1. **During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund; and**
2. **Following the Subscription Period, the investment objective of the Fund is to achieve long-term capital appreciation**.

As stated above, the main investment objective of the Fund is as set out in (2) above and in the section headed "After the Subscription Period and up to the Maturity Date". The reason for having a Subscription Period is to have a short 60 day time period during which the Fund will accept subscriptions and invest them in a manner designed to seek to achieve a positive investment return whilst maintaining liquidity for the Fund. After the Subscription Period subscriptions into the Fund are no longer accepted. Although the Fund will be closed for subscriptions after the Subscription Period, requests for redemptions received prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day (i.e. each Business Day) in accordance with the section of the Prospectus entitled **"**Redemption of Shares".

During the Subscription Period

During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund. The Manager will seek to achieve this objective by investing principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's

acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

Investment in the Initial Strategies will be selected on the basis that will result in the Fund having a weighted average interest rate duration of no longer than 2 years.

Selection of debt instruments

The debt instruments that may be part of the Initial Strategies will selected based on the Manager's top-down analysis, which includes a view on the global investment outlook and analysis of market opportunities and securities based on an assessment of factors such as income yield, credit risk and bond duration. The Manager's will assess each individual bond and the bond markets to understand the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the bonds under assessment. Following such credit assessment, the Manager appraises a potential investment in a bond in terms of relative value when compared to other bonds that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which bonds to acquire on behalf of the Fund. When an investment in a bond is made, it will be closely monitored by the Manager taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such bond will be kept under review by the Manager. The Manager may invest substantially or fully in government bonds issued by any Member State.

After the Subscription Period and up to the Maturity Date

Following the Subscription Period, the investment objective of the Fund is to achieve long-term capital appreciation.

The Fund seeks to achieve this objective in the following manner:

1. By reducing the Fund's allocation to Initial Strategies on a monthly basis ("Averaging Out").

   For example, it is anticipated that following the last day of the Subscription Period and on a monthly basis the Fund's asset allocation to Initial Strategies will reduce on average by 4.54% of the Fund's assets.

   The Manager, based on their discretion, can alter the above monthly amount by accelerating the reduction to the Initial Strategies according to their view of market conditions. The Manager's view on market conditions will be informed by a proprietary quantitative model designed by the Manager which is described below (the "Quant Model"). Each monthly reduction will be followed by a corresponding investment by the Fund into the Longer Term Strategies (described at point 2 below).This Averaging Out will continue every month up to the Maturity Date.

   The Manager will run the Quant Model in order to analyse market conditions which will inform them as to how much they should accelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies.

   This proprietary Quant Model allows the Manager assess market conditions using quantifiable, definitive and numerical data that can be used for checking portfolio return robustness via historical simulations; i.e. it is analysis on documented and definitive information on the past performance of the relevant market. The Quant Model will be based on technical and market indicators such as the relative strength index which analyses the historical strength or weakness of a stock or market based on closing prices of a recent trading period. The analysis produced by the Quant Model allows the Manager take advantage of favourable market conditions when assessing whether or not to increase the Averaging Out amount above 4.54% a month. Favourable market conditions in this context mean conditions that, once the Manager has run the Quant Model and assessed the resulting data and market indicators arising from the running of the Quant Model, indicate to the Manager that it is favourable for the Manager to accelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies at a favourable price.

   The Averaging Out process will occur every month, following the last day of the Subscription Period, for approximately 22 months up to the Maturity Date. At the Maturity Date, the Fund will be fully invested in the Longer Term Strategies. The gradual exposure of Shareholders to the Longer Term Strategies allows Shareholders obtain a diversified exposure to the market while neutralizing the effect of short-term price fluctuations in the broader market. In addition, the Quant Model allows the Manager

the discretion to take advantage of favourable market conditions (described above) in respect of potentially accelerating Shareholders exposure to the Longer Term Strategies.

2. As described above, every month the Fund will complete the Averaging Out process and the exposure to the Initial Strategies will be reduced and an exposure will be obtained to Underlying Funds as described in detail immediately below (the "Longer Term Strategies"). As part of the Longer Term Strategies the Fund:

    I. may invest principally in Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world, and which take account of any one or all of the following considerations, environmental, social responsibility and governance ("ESG"), as described below,

    ESG considerations concern the selection of securities which provide exposure to organisations which hold the highest standards of sustainability, ethics and/or corporate governance.

    The environmental element of ESG may look at how an organisation performs as a steward of the natural environment. The social element of ESG may examine how an organisation manages relationships with its employees, service providers and the community at large. The governance element of ESG may consider how an organisation's leadership, executive pay, audits and internal controls work whilst also understanding how shareholders are given the appropriate voting rights.

    As responsible investing is the main focus of the Fund, the Manager will, in addition to the criteria outlined in the section entitled "Selection of Underlying Funds", seek to identify Underlying Funds managed by investment managers which have a commitment to responsible investing and which take account of the ESG criteria as described above. The Manager may do this by analysing if the relevant fund manager of the Underlying Fund is:

    - A signatory to the United Nations supported Principles for Responsible Investment organisation or similar body which encourages a responsible approach to investing;
    - Incorporating the assessment of ESG factors such as waste and pollution, working conditions and board diversity and structure as a key part of their investment process in identifying and evaluating a potential purchase or disposal of an investment;
    - Employing a dedicated ESG analyst or team in respect of the implementation of their ESG strategy; and
    - Actively engaging with companies in which they are invested and using their shareholder voting rights to promote ESG standards in these companies.

    In the selection of the Underlying Funds the Manager will also assess whether or not the Underlying Fund has a sustainability rating or score provided by a recognised data service provider; and

    II. may invest up to 20% of its Net Asset Value in units of Underlying Funds managed with absolute return investment strategies. These strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. These strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements;

    III. may invest up to 20% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate.

At any time, the Fund may only have a maximum exposure of 30%, either directly or through Underlying Funds, to non-Investment Grade debt securities.

Selection of Underlying Funds

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which make up the Initial Strategies and the Longer Term Strategies.
The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in instruments that make up the Initial Strategies and Longer Term Strategies, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Fund also being managed by the Manager.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested "alternative investment funds" ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond

rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the MSCI World Net Total Return Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business

Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility. The Fund is not designed for investors who need current income.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.[1]

SFDR Disclosure

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of**

[1] The Fund currently follows a fund of funds investment approach and can invest principally in UCITS or other investment funds that are eligible for investment by a UCITS as set out in the Prospectus and this Supplement. The Manager therefore relies on data provided by the investment managers of the Underlying Fund investments when calculating the minimum percentage proportion of sustainable investment of the Fund and when calculating the percentages required in the section of Annex II dealing with the planned asset allocation of the Fund.

the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk and the Paris Aligned Benchmark Exclusions (the "**PAB Exclusions**").

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	18 December 2020 – 12 January 2021	Euro	No	Up to 2%	€1,000 / €100	Accumulating
Class D Acc	€100	18 December 2020 – 12 January 2021	Euro	No	No	€500 / €100	Accumulating

During the Initial Offer Period, Shares are available for subscription at the Initial Offer Price, as indicated directly above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to the following management fee of the Net Asset Value of each Class of Shares:

Management Fee (% of NAV) of each Share Class	
During the Subscription Period	Up to 0.20%
After the Subscription Period up to the end of year 1	Up to 1.5%
After the end of year 1 up to the end of year 2	Up to 2.5%
After the end of year 2	Up to 2.5%

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first two years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Sales Charge
Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding, in which case, in order to avoid double charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: FAM SUSTAINABLE TARGET 2023
Legal entity identifier: 254900SYB0X17BVTMV92

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective: ___%**	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 51% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective: ___%**	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The environmental and/or social characteristics of this product include:

a. **Minimum investment in funds falling within the meaning of Article 8 and 9 of the SFDR**
The Fund will invest a minimum of 90% in underlying funds classified as falling within the meaning of either Article 8 and/or Article 9 under SFDR, which means, that at a minimum, the majority of the underlying funds which the Fund holds promote

environmental and social characteristics while investing in companies which follow good governance practices.

b. Positive Screening

Consideration of environmental, social and governance ("ESG factors") are a key element of portfolio construction/fund selection. Portfolio managers will take a holistic approach which includes the analysis of ESG factors as part of their overall risk adjusted valuation assessment. This supports the overall promotion of investment in funds which the Manager deems desirable on ESG grounds. By incorporating positive ESG factors as part of the overall portfolio construction/fund selection, the Fund through its investments supports a tilt towards investment in underlying funds that have a more positive impact on the environment or society at large.

c. Fund Level ESG Scoring

A monthly independent analysis and classification of the Fund's ESG score is performed internally by the Manager. A minimum ESG scoring threshold is applied at Fund level to ensure that the Fund's ESG score does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control serves to highlight a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers on ESG topics.

d. Negative Screening (Norm-based exclusions)

For any potential direct holdings the Manager applies its basic exclusions (the "**Basic Exclusions**") as well as the PAB Exclusions in accordance with its Exclusion Policy. The Manager wants its funds under management to avoid making any investments which the Manager or its clients might deem incompatible with minimum responsible investing principles. To align the Fund's investments with this sustainable investment approach, Manager have adopted a firm wide exclusion policy which screens all investments for their compliance with minimum international standards and norms, from which an Exclusion List is derived..

Those exclusions currently include:

a. Issuers that breach the principles of the United Nations Global Compact;
b. Issuers involved in the manufacture or product life cycle of controversial weapons including biological and chemical weapons, cluster munitions and sub-munitions, depleted uranium, landmines including antipersonnel mine and nuclear weapons);
c. Issuers involved in the cultivation and production of tobacco
d. Issuers that derive 1% or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;
e. Issuers that derive 10% or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;
f. Issuers that derive 50% or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;
g. Issuers that derive 50% or more of their revenues from electricity generation with a GHF intensity of more than 100g C02 e/kWh
h. Issuers that contravene the United Nations Global Company labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards

The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy and the PAB Exclusions.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted.

- ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Fund uses the following indicator;

i. The percentage of the Fund portfolio made in sustainable investments;

ii. the percentage of the Fund's underlying fund holdings rated A by MSCI ESG Manager (or an other corresponding rating from a similar rating provider).

- ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments that the Fund intends to make is to promote environmental and/or social characteristics. On the basis that the Fund is currently following a fund of funds investment approach, the objectives of the sustainable investments that the Fund partially intends to make is linked to the sustainable investments made by the underlying funds. The Fund will seek to make investments in underlying funds that commit/partially commit to invest in sustainable investments and who have a process for ensuring that their sustainable investments are:

a. Made in investee companies that demonstrate good governance;

b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

c. Made in investee companies that make a positive contribution towards an environmental or social objective. The Fund may allocate between underlying funds which make sustainable investments of any type, i.e. investments with an environmental, and/or a social objective. The Fund is not required to favour any specific type of sustainable investment.

- ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective based on the policies adopted by the relevant underlying fund investment managers. These policies are considered as part of the Manager's initial and ongoing investment due diligence procedures and are assessed for alignment with the indicators set out in Table 1 and any relevant additional indicator from Tables 2 and 3 of Annex I of the Delegated Regulation and the approach taken by the Manager.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Principal adverse impact ("PAI") indicators are calculated at both the Fund level and the underlying fund level. The results will be compared with that of a chosen proxy benchmark representative of the Fund's investment universe and/or peers. These calculations will be used as the basis of assessment of adverse impacts on sustainability factors in order to determine whether the Manager can improve at Fund level and/or where Manager can engage with underlying fund investment managers to improve at the underlying fund level. For example, Manager may engage on disclosure if a certain metric is materially misaligned with that of the chosen proxy and/or peers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments which the Fund makes in the underlying funds and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are assessed in the following ways;

1. Via PAI monitoring of the following indicators;

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

2. Through engagement with the underlying fund investment managers to ensure that the sustainable investments that the underlying funds makes are:

    a. Made in investee companies that demonstrate good governance:

    b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

    c. Made in investee companies that make a positive contribution towards an environmental or social objective.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

☒ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the Fund portfolio against mandatory and additional PAI indicators. Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report. The PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

☐ No

What investment strategy does this financial product follow?

The Fund is structured as a Fund giving a return to investors at the Maturity Date. The Fund is organised in a manner that it has two separate investment objectives for different time periods in the Fund's life, as set out below. Please refer to the supplement to the Prospectus titled "FAM Sustainable Target 2023" (the "Supplement") for definitions of "Maturity Date" and "Subscription Period".

1. During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund. The Manager will seek to achieve this objective by investing principally, either directly, or indirectly via units of underlying funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

2. Following the Subscription Period the investment objective of the Fund is to achieve medium to long-term capital appreciation. The Fund seeks to achieve this objective in the following manner:

- By reducing the Fund's allocation to Initial Strategies on a monthly basis ("Averaging Out").

- Every month the Fund will complete the Averaging Out process and the exposure to the Initial Strategies will be reduced and an exposure will be obtained to underlying funds as described in detail in the Supplement (the "Longer Term Strategies").

As part of the Longer Term Strategies, the Fund may invest up to 100% of the Fund's assets in underlying funds that provide exposure to equities issued by companies incorporated anywhere in the world, and which take account of a number of ESG factors.

Although the Fund does not have a specific sustainable investment objective, the Fund will pursue an investment strategy that seeks to identify the best investment opportunities by integrating financial analysis with environmental, social responsibility and governance considerations. In order to meet such extra-financial characteristics, the target funds or the assets held directly by the Fund are assessed as related to sustainable and social criteria and where applicable, they must have an explicit commitment to responsible investing as per their investment process.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The ESG rating of each instrument held by the Fund should be reflected in an assessment, and ultimately in the decision on whether to invest in such instrument. The Fund will invest, directly or indirectly through open-ended UCIs and UCITS, in instruments that have better social or environmental ratings and/or are issued by issuers with better social or environmental practices. For example as stated above, the Fund currently intends to invest a minimum of 90% in other funds classified as either Article 8 and/or Article 9 under SFDR, which means, that at a minimum, the majority of the underlying funds which the Fund holds promote environmental and social characterisictics while investing in companies which follow good governance practices.

The Manager also maintains due diligence processes to assess the ESG commitments of underlying investments and underlying fund managers. To this end, the Manager, reviews and assesses on a periodic basis private and public information related to each issuer and/or relevant underlying fund manager, as applicable, and its ESG rating or characteristics. In addition to such assessment, the Manager will obtain from each issuer (and/or the relevant underlying fund manager, as the case may be), which has been selected for investment by the Fund, any information necessary to assess the ESG rating or characteristics of the relevant underlying investment.

For any direct investment (i.e. non-underying fund investments), companies that are in breach of UN Global Compact principles (along with certain other Exclusion criteris) are excluded from the investment universe of the Fund as defined by the Manager. Where an investment is deemed inappropriate, no further investment may be made in the instrument, however existing holdings may be retained for a period of time to facilitate orderly divestment. For investment in underlying funds, exclusions of the underying fund manager are assessed as part of the initial and ongoing due diligence process.

For any direct investment (i.e. non-underying fund investments), the Manager recognises and adheres to the principle of responsible stewardship via sustainable proxy voting and collective enagement initiatives as a way of promoting good ESG policies.

The elements of the investment strategy to attain of the environmental or social characteristics promoted by this financial product as described above are systematically integrated throughout the investment process

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

  a. **Minimum investment in funds falling within the meaning of Article 8 and Article 9 of the SFDR**
  The Fund will invest a minimum of 90% in other funds classified as falling within the meaning of either Article 8 and/or Article 9 under the SFDR.

  b. **Minimum underlying fund score**
  80% of the Fund's underlying fund holdings will be rated A by MSCI ESG Manager (or an other corresponding rating from a similar rating provider). If the Sustainable Finance Committee of the Manager determines that the underlying fund in question has mitigating reasons for its MSCI ESG score to have fallen below A, the underlying fund holding may be maintained within the Fund portfolio.

  c. **Exclusion Policy**
  For any direct holdings (i.e. non-underying fund investments), the Manager's Exclusion Policy applies, and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

  Not applicable

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

- ***What is the policy to assess good governance practices of the investee companies?***

  Good governance is assessed for underlying funds through engagement with the underlying fund manager via due diligence.

  In addition, ensuring that a minimum of 90% of the portfolio is invested in funds falling within the meaning of Article 8 or Article 9 of the SFDR, demonstrates that the Manager is limiting the Fund's investment universe of underlying funds to focus on those investment

funds that must only invest in investee companies that demonstrate good governance practices (in compliance with SFDR).

In addition, direct holdings (i.e. non-underlying fund investments) in the Fund must have a minimum rating of BB according to MSCI ESG Manager (or an other corresponding rating from a similar rating provider). This ensures a level of good governance vis a vis the above scores. Limited exceptions to this rule may apply.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments means the products Net Asset Value which is the total market value of the product.

At least 90% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund. The Financial product also comments to a minimum proportion of 51% in sustainable investments. The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

The asset allocation may change over time and percentages may be updated in this appendix from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate underlying fund manager data and/or company or third-party data.

- ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**

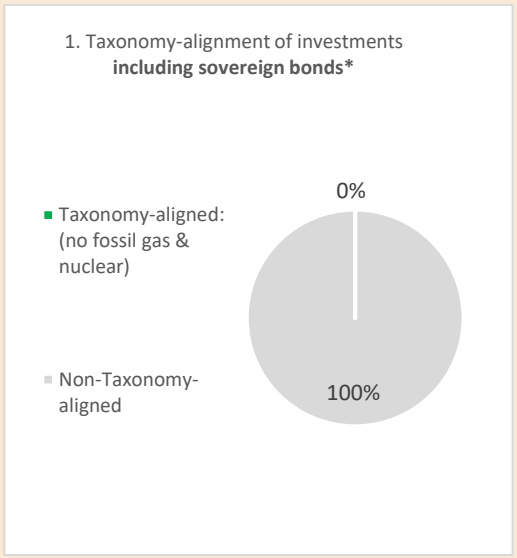
  Derivatives are not used to attain the environmental or social characteristics promoted by this Fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

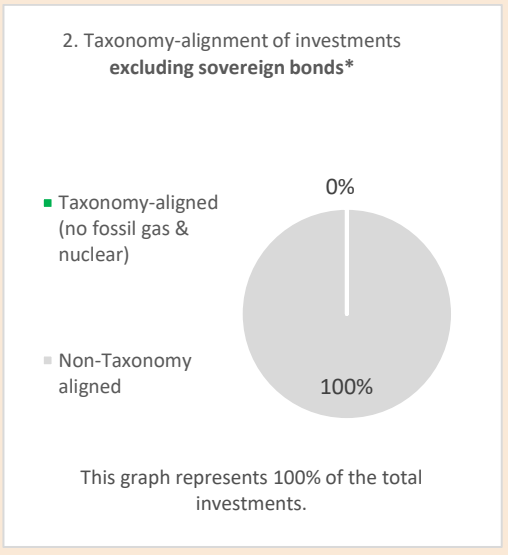
As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities are** activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the best performance.



- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy1?**



Yes:

In fossil gas In nuclear energy

No: X

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

What is the minimum share of investments in transitional and enabling activities? 0%.

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

51%*.

What is the minimum share of socially sustainable investments?

51%*.

*The Fund commits to invest at least 51% of its assets in sustainable investments. Within this overall commitment, there is no prioritisation of environmental and/or social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and

social objectives by allowing the Manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the Managers Exclusion Policy.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Responsible Investment Policy, summary investment process and Exclusion Policy can be found on the Manager's website at the following link: FAM -

FAM MEGATRENDS TARGET VII

SUPPLEMENT DATED 30 JUNE 2025

This Supplement contains specific information in relation to **FAM MegaTrends Target VII** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset- management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 1 December 2022 and each addendum thereto (together the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. An investment in the Fund involves certain investment risks, including the possible loss of principal. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Subscription Period	The original Subscription Period closed in 2021 (the **Original Subscription Period**). The subsequent Subscription Period means the 60 calendar days from 1 July 2025 to 1 September 2025 or such longer or shorter period, as may be determined by the Directors and on a quarterly basis thereafter at the discretion of the Directors and once notified in advance to Shareholders Shares will be available for subscription during this time, at the prevailing Net Asset Value (NAV) per Share.

Investment Objective and Policies

The investment objective of the Fund is to achieve long- term capital appreciation.

The Fund:

I. may invest principally in Underlying Funds that provide exposure to equities issued by companies operating in sectors and geographical regions that benefit from ongoing global megatrends.

Global megatrends ("Megatrends") are generally defined as global forces of development that create fundamental shifts in the progress of society thus impacting business, the economy, culture and the way we live. Examples of Megatrends that are currently reshaping our world are: demographic and social changes, climate change and resource scarcity, technological breakthroughs and rapid urbanization. Megatrends evolve independently of the economic cycle and, thus, possess the capacity to continuously redraw the financial landscape. By underpinning these Megatrends, it is possible to identify investment sub-themes which act as both drivers and beneficiaries of these Megatrends.

A summary of some of the sub-themes of the abovementioned Megatrends prevalent in the world today are listed below. Potential Shareholders should be aware that the below listed headings are examples of certain sub-themes of Megatrends and are for illustrative purposes only. It is important for potential Shareholders to note that what constitutes a

Megatrend sub-theme today may not be classed as such in the future. This is not intended to be an exhaustive list and these sub-themes have the ability to change over time. Therefore, the Fund does not commit to definitively invest in each or all of these Megatrend sub-themes at any time:

- Ageing Population: The ageing of the world's population is widely considered one of the most enduring demographic shifts in human history. Companies which have a focus on improving developments in healthcare, developments in Biotechnology and shifting consumer trends leading to a longer life expectancy are in a position to benefit greatly from this trend;
- Oncology: With cancer diagnoses expected to increase in the next 20 years, companies which are committing capital to cancer research to develop better diagnostics to cure cancer are in a position to benefit from developments in the treatment of cancer;
- Water: Population growth, urbanization and water-intensive dietary changes are adding to rising industrial water demand. Companies at the forefront of new technologies required to accommodate increasing global demand for water are well placed to benefit from this trend;
- Electric & Autonomous Vehicles: With a shift away from internal combustion engine vehicles and movement toward the broad usage of autonomous vehicles, manufacturers of both electric and autonomous vehicles as well as their components and other companies in the supply chain all stand to be beneficiaries from this trend; and
- Drones: Extensive growth in consumer and commercial drone usage means that companies involved in the production of these technologies will benefit from this evolving trend.

II. may invest up to 20% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate;

III. may invest up to 20% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and

At any time, the Fund may only have a maximum exposure of 30%, either directly or through Underlying Funds, to non-Investment Grade debt securities.

Selection of Underlying Funds

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be

considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds being managed by the Manager.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on the Recognised Markets.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in alternative investment funds ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract

between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund."

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the MSCI World Net Total Return Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility. The Fund is not designed for investors who need current income.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.[1]

[1] The Fund currently follows a fund of funds investment approach and can invest principally in UCITS or other investment funds that are eligible for investment by a UCITS as set out in the Prospectus and this Supplement. The Manager therefore

SFDR Disclosure

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of the SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

[1] The Fund currently follows a fund of funds investment approach and can invest principally in UCITS or other investment funds that are eligible for investment by a UCITS as set out in the Prospectus and this Supplement. The Manager therefore relies on data provided by the investment managers of the Underlying Fund investments when calculating the minimum percentage proportion of sustainable investment of the Fund and when calculating the percentages required in the section of Annex II dealing with the planned asset allocation of the Fund.

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	Closed	Euro	No	Up to 2%	€1,000 / €100	Accumulating
Class D Acc	€100	Closed	Euro	No	No	€500 / €100	Accumulating

During the Initial Offer Period, Shares are available for subscription at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to the following management fee of the Net Asset Value of each Class of Shares:

Management Fee (% of NAV) for each Share Class	
During the Original Subscription Period	Up to 0.20%
After the Original Subscription Period up to the end of year 1	Up to 1.50%
After the end of year 1 up to the end of year 2	Up to 2.50%
After the end of year 2	Up to 2.50%

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding, in which case, in order to avoid double charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated

not to exceed €20,000 will be borne by the Fund and amortised over the first two years of the Fund's operation (or such other period as may be determined by the Directors at their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FAM MEGATRENDS TARGET VII
Legal entity identifier: 254900ONQ81O6QE4IP75

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective: ___%**	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 15% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	with a social objective
☐ It will make a minimum of **sustainable investments with a social objective: ___%**	It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The environmental and/or social characteristics of this product include:

a. Minimum investment in funds in scope of Article 8 and 9 of the SFDR

The Fund will invest a minimum of 90% in Underlying Funds which fall within the meaning of either Article 8 or Article 9 of the SFDR, which means, that at a minimum, the majority of the Underlying Funds which the Fund holds promote environmental and social characteristics while investing in companies which follow good governance practices.

b. Positive Screening

Consideration of ESG factors are a key element of portfolio construction/fund selection. Portfolio managers will take a holistic approach which includes the analysis of ESG factors as part of their overall risk adjusted valuation assessment. This supports the overall promotion of investment in funds which the Manager deems desirable on ESG grounds. By incorporating positive ESG factors as part of the overall portfolio construction/fund selection, the Fund through its investments supports a tilt towards investment in Underlying Funds that have a more positive impact on the environment or society at large.

c. Fund Level ESG Scoring

A monthly independent analysis and classification of the Fund's ESG score is performed internally by the Manager. A minimum ESG scoring threshold is applied at Fund Level to ensure that the Fund's ESG score does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control serves to highlight a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers on ESG topics.

d. Negative Screening (Norm-based exclusions)

For any potential direct holdings the Manager applies norms-based exclusions based on its Exclusion Policy. The Manager wants its funds under management to avoid making any investments which the Manager or its clients might deem incompatible with minimum responsible investing principles. To align the Fund's investments with this sustainable investment approach, Manager have adopted a firm wide exclusion policy which screens all investments for their compliance with minimum international standards and norms, from which an Exclusion List is derived..

Exclusion categories considered in the Exclusion Policy are:

- United Nations Global Compact Principles
- Controversial Weapons
- Tobacco
- Climate Change
- Forced Labour

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Fund uses the following indicator;

i. The percentage of the Fund portfolio made in sustainable investments;

ii. the percentage of the Fund's Underlying Fund holdings rated A or above by MSCI ESG Manager (or another corresponding rating from a similar rating provider).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments that the Fund intends to make is to promote environmental and/or social characteristics. On the basis that the Fund is currently following

a fund of funds investment approach, the objectives of the sustainable investments that the Fund partially intends to make is linked to the sustainable investments made by the Underlying Funds. The Fund will seek to make investments in Underlying Funds that commit/partially commit to invest in sustainable investments and who have a process for ensuring that their sustainable investments are:

a. Made in investee companies that demonstrate good governance;

b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

c. Made in investee companies that make a positive contribution towards an environmental or social objective. The Fund may allocate between Underlying Funds which make sustainable investments of any type, i.e. investments with an environmental, and/or a social objective. The Fund is not required to favour any specific type of sustainable investment.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective based on the policies adopted by the relevant Underlying Fund investment managers. These policies are considered as part of the Manager's initial and ongoing investment due diligence procedures and are assessed for alignment with the indicators set out in Table 1 and any relevant additional indicator from Tables 2 and 3 of Annex I of the Delegated Regulation.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Principal adverse impact ("PAI") indicators are calculated at both the Fund level and the Underlying Fund level. The results will be compared with that of a chosen proxy benchmark representative of the Fund's investment universe and/or peers. These calculations will be used as the basis of assessment of adverse impacts on sustainability factors in order to determine whether the Manager can improve at Fund level and/or where Manager can engage with Underlying Fund investment managers to improve at the Underlying Fund level. For example, Manager may engage on disclosure if a certain metric is materially misaligned with that of the chosen proxy and/or peers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments which the Fund makes in the Underlying Funds and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are assessed in the following ways;

1. Via PAI monitoring of the following indicators;

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

2. Through engagement with the Underlying Fund investment managers to ensure that the sustainable investments that the Underlying Funds makes are:

a. Made in investee companies that demonstrate good governance:

b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

c. Made in investee companies that make a positive contribution towards an environmental or social objective.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

✖ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the Fund portfolio against mandatory and additional PAI indicators. Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report. The PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

☐ No

What investment strategy does this financial product follow?

The investment objective of the Fund is to achieve long-term capital appreciation. The

Fund may invest principally in Underlying Funds that provide exposure to equities issued by companies operating in sectors and geographical regions that benefit from ongoing global megatrends, as further described in the Supplement.

Although the Fund does not have a specific sustainable investment objective, the Manager has fully integrated the ESG Policy into the overall investment process, in particular, the portfolio construction process.

As part of the process to undertake appropriate due diligence on investments, the Manager will generally conduct a level of research on each Underlying Fund which will give the Investment Manager an understanding of the investments underpinning same. This includes a quantitative and qualitative assessment as detailed in the "Investment Objective and Policies" section of the Supplement which involves scrutiny relating to each

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Underlying Fund's approach to ESG factors and consideration of Sustainability Risks.

The Manager integrates these ESG factors and this Sustainability Risk assessment into its investment research process and its risk management process – both initially and on an ongoing basis for the duration of the period the Fund holds an investment or pursues a particular investment strategy.

For investment in Underlying Funds, exclusions of the Underying Fund manager are assessed as part of the initial and ongoing due diligence process.

For any direct investment (i.e. non-underying fund investments), companies that are in breach of UN Global Compact principles (along with certain other Exclusion criteris) are excluded from the investment universe of the Fund as defined by the Manager. Where an investment is deemed inappropriate, no further investment may be made in the instrument, however existing holdings may be retained for a period of time to facilitate orderly divestment. For investment in underlying funds, exclusions of the underying fund manager are assessed as part of the initial and ongoing due diligence process.

For any direct investment (i.e. non-underying fund investments), the Manager recognises and adheres to the principle of responsible stewardship via sustainable proxy voting and collective enagement initiatives as a way of promoting good ESG policies.

The elements of the investment strategy to attain of the environmental or social characteristics promoted by this financial product as described above are systematically integrated throughout the investment process

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

Asset allocation describes the share of investments in

a. Minimum investment in funds in scope of Article 8 and Article 9 SFDR
The Fund will invest a minimum of 90% in other funds which fall within the meaning of either Article 8 and/or Article 9 of the SFDR.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU

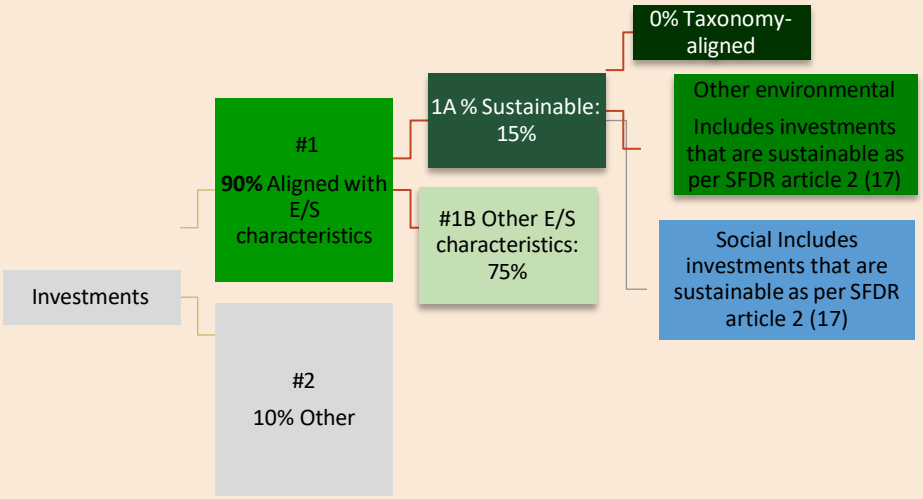
b. Minimum Underlying Fund score
80% of the Fund's Underlying Fund holdings will be rated A by MSCI ESG Manager (or an other corresponding rating from a similar rating provider). If the Sustainable Finance Committee of the Manager determines that the Underlying Fund in question has mitigating reasons for its MSCI ESG score to have fallen below A, the Underlying Fund holding may be maintained within the Fund portfolio.

c. Exclusion Policy
For any direct holdings (i.e. non-underying fund investments), the Manager's Exclusion Policy applies, and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

Not applicable

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.



What is the policy to assess good governance practices of the investee companies?

Good governance is assessed for Underlying Funds through engagement with the Underlying Fund manager via due diligence.

In addition, ensuring that a minimum of 90% of the portfolio is invested in funds which fall within the meaning of Article 8 or 9 of the SFDR, demonstrates that the Manager is limiting the Fund's investment universe of Underlying Funds to focus on those investment funds that must only invest in investee companies that demonstrate good governance practices (in compliance with SFDR).

What is the asset allocation planned for this financial product?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational**

*Investments means the Fund's Net Asset Value which is the total market value of the product.

At least 80% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund. The Financial product also comments to a minimum proportion of 15% in sustainable investments. The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

The asset allocation may change over time and percentages may be updated in this appendix from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate underlying fund manager data and/or company or third-party data.

***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**

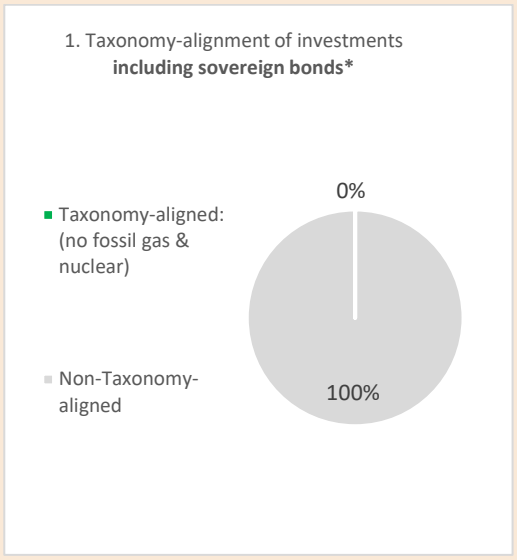
Derivatives are not used to attain the environmental or social characteristics promoted by this Fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

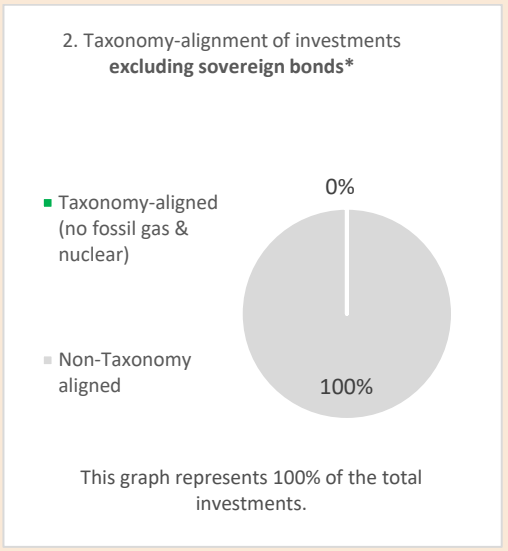
As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities are** activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[1]?



Yes:

In fossil gas In nuclear energy

No: X

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What is the minimum share of investments in transitional and enabling activities?
0%. There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?
15%*.

What is the minimum share of socially sustainable investments?
15%*

*The Fund commits to invest at least 15% of its assets in sustainable investments. Within this overall commitment, there is no prioritisation of environmental and/or social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the Manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

What investments are included under "#2 Other", what is their purpose and

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the managers exclusion policy.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Fund, including the Responsible Investment Policy and Exclusion Policy can be found on the Manager's website at the following link FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)

FAM MEGATRENDS TARGET 2026 II

SUPPLEMENT DATED 7th July 2023

This Supplement contains specific information in relation to **FAM MegaTrends Target 2026 II** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. An investment in the Fund involves certain investment risks, including the possible loss of principal. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Maturity Date	23 March 2026
Subscription Period	means the 60 calendar days following the end of the Initial Offer Period or such longer or shorter period, as may be determined by the Directors in accordance with the requirements of the Central Bank.

Investment Objective and Policies

The Fund is being structured as a Fund giving a return to investors at the Maturity Date. The Fund is organised in a manner that it has two separate investment objectives for different time periods in the Fund's life as follows, and as explained in detail in each sub-section below:

1. **During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund; and**

2. **Following the Subscription Period, the investment objective of the Fund is to achieve long-term capital appreciation**.

As stated above, the main investment objective of the Fund is as set out in (2) above and in the section headed "After the Subscription Period and up to the Maturity Date". The reason for having a Subscription Period is to have a short 60 day time period during which the Fund will accept subscriptions and invest them in a manner designed to seek to achieve a positive investment return whilst maintaining liquidity for the Fund. After the Subscription Period, subscriptions into the Fund are no longer accepted. Although the Fund will be closed for subscriptions after the Subscription Period, requests for redemptions received prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day (i.e. each Business Day) in accordance with the section of the Prospectus entitled **"**Redemption of Shares".

During the Subscription Period

During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund. The Manager will seek to achieve this objective by investing principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

Investment in the Initial Strategies will be selected on the basis that will result in the Fund having a weighted average interest rate duration of no longer than 4.5 years.

Selection of debt instruments
The debt instruments that may be part of the Initial Strategies will selected based on the Manager's top-down analysis, which includes a view on the global investment outlook and analysis of market opportunities and securities based on an assessment of factors such as income yield, credit risk and bond duration. The Manager's will assess each individual bond and the bond markets to understand the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the bonds under assessment. Following such credit assessment, the Manager appraises a potential investment in a bond in terms of relative value when compared to other bonds that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which bonds to acquire on behalf of the Fund. When an investment in a bond is made, it will be closely monitored by the Manager taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such bond will be kept under review by the Manager. The Manager may invest substantially or fully in government bonds issued by any Member State.

After the Subscription Period and up to the Maturity Date
Following the Subscription Period, the investment objective of the Fund is to achieve long-term capital appreciation.

The Fund seeks to achieve this objective in the following manner:

1. By reducing the Fund's allocation to Initial Strategies on a monthly basis ("Averaging Out").

   For example, it is anticipated that following the last day of the Subscription Period and on a monthly basis, the Fund's asset allocation to Initial Strategies will reduce on average by 1.72% of the Fund's assets.

   The Manager, based on their discretion, can alter the above monthly amount by accelerating the reduction to the Initial Strategies according to their view of market conditions. The Manager's view on market conditions will be informed by a proprietary quantitative model designed by the Manager which is described below (the "Quant Model"). Each monthly reduction will be followed by a corresponding investment by the Fund in the Longer Term Strategies (described at point 2 below). This Averaging Out will continue every month up to the Maturity Date.

   The Manager will run the Quant Model in order to analyse market conditions which will inform them as to how much they should accelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies.

   This proprietary Quant Model allows the Manager to assess market conditions using quantifiable, definitive and numerical data that can be used for checking portfolio return robustness via historical simulations; i.e. it is analysis on documented and definitive information on the past performance of the relevant market. The Quant Model will be based on technical and market indicators such as the relative strength index which analyses the historical strength or weakness of a stock or market based on closing prices of a recent trading period. The analysis produced by the Quant Model allows the Manager to take advantage of favourable market conditions when assessing whether or not to increase the Averaging Out amount above 1.72% a month. Favourable market conditions in this context mean conditions that, once the Manager has run the Quant Model and assessed the resulting data and market indicators arising from the running of the Quant Model, indicate to the Manager that it is favourable for the Manager to accelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies at a favourable price.

   The Averaging Out process will occur every month, following the last day of the Subscription Period, for approximately 58 months up to the Maturity Date. At the Maturity Date the Fund will be fully invested in the Longer Term Strategies. The gradual exposure of Shareholders to the Longer Term Strategies allows Shareholders to obtain a diversified exposure to the market while neutralizing the effect of short-term price fluctuations in the broader market. In addition, the Quant Model gives Manager the discretion to take advantage of favourable market conditions (described above) in respect of potentially accelerating Shareholders exposure to the Longer Term Strategies.

2. As described above, every month the Fund will complete the Averaging Out process and the exposure to the Initial Strategies will be reduced and an exposure will be obtained to Underlying Funds as

described in detail immediately below (the "Longer Term Strategies"). As part of the Longer Term Strategies the Fund:

I. may invest principally in Underlying Funds that have a primary focus on providing exposure to equities issued by companies operating in sectors and geographical regions that benefit from ongoing global megatrends.

Global megatrends ("Megatrends") are generally defined as global forces of development that create fundamental shifts in the progress of society thus impacting business, the economy, culture and the way we live. Examples of Megatrends that are reshaping our world currently are demographic and social changes, climate change and resource scarcity, technological breakthroughs and rapid urbanization. Megatrends evolve independently of the economic cycle and thus possess the capacity to continuously redraw the financial landscape. Underpinning these Megatrends, it is possible to identify investment sub-themes which act as both drivers and beneficiaries of these Megatrends.

A summary of some of the sub-themes of the abovementioned Megatrends prevalent in the world today are listed below. Potential Shareholders should be aware that the below headings listed 1-5 are examples of certain sub-themes of Megatrends and are for illustrative purposes only. It is important for potential Shareholders to note that what constitutes a Megatrend sub-theme today may not be classed as such in the future. This is not intended to be an exhaustive list and these sub-themes have the ability to change over time. Therefore, the Fund does not commit to definitively invest in each or all of these Megatrend sub-themes at any time:

- Ageing Population: The ageing of the world's population is widely considered one of the most enduring demographic shifts in human history. Companies which have a focus on improving developments in healthcare, developments in BioTechnology and shifting consumer trends leading to a longer life expectancy are in a position to benefit greatly from this trend;
- Oncology: With cancer diagnoses expected to increase in the next 20 years, companies which are committing capital to cancer research to develop better diagnostics to cure cancer are in a position to benefit from developments in the treatment of cancer;
- Water: Population growth, urbanization and water-intensive dietary changes are adding to rising industrial water demand. Companies at the forefront of new technologies required to accommodate increasing global demand for water are well placed to benefit from this trend;
- Electric & Autonomous Vehicles: With a shift away from internal combustion engine vehicles and movement toward the broad usage of autonomous vehicles, manufacturers of both electric and autonomous vehicles as well as their components and other companies in the supply chain all stand to be beneficiaries from this trend; and
- Drones: Extensive growth in consumer and commercial drone usage means that companies involved in the production of these technologies will benefit from this evolving trend.

II. may invest up to 20% of its Net Asset Value in units of Underlying Funds managed with absolute return investment strategies. These strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. These strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements; and

III. may invest up to 20% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate.

At any time, the Fund may only have a maximum exposure of 30%, either directly or through Underlying Funds, to non-Investment Grade debt securities.

Selection of Underlying Funds

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which make up the Initial Strategies and the Longer Term Strategies.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in instruments that make up the Initial Strategies and Longer Term Strategies, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade- off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers, as follows:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and
- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Fund also being managed by the Manager.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested "alternative investment funds" ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates.

Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the MSCI World Net Total Return Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not

exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility. The Fund is not designed for investors who need current income.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.[1]

SFDR Disclosure

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of**

[1] The Fund currently follows a fund of funds investment approach and can invest principally in UCITS or other investment funds that are eligible for investment by a UCITS as set out in the Prospectus and this Supplement. The Manager therefore relies on data provided by the investment managers of the Underlying Fund investments when calculating the minimum percentage proportion of sustainable investment of the Fund and when calculating the percentages required in the section of Annex II dealing with the planned asset allocation of the Fund.

the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of the SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	**Initial Offer Price**	**Initial Offer Period**	**Currency Denomination and Hedged Class**		**Sales Charge**	**Minimum Initial Subscription and Minimum Subsequent Subscription**	**Distribution Type**
Class L Acc	€100	08 March 2021– 23 March 2021	Euro	No	Up to 2%	€1,000 / €100	Accumulating
Class D Acc	€100	08 March 2021– 23 March2021	Euro	No	No	€500 / €100	Accumulating

*Class D Shares in the Fund shall only be made available for subscription to such entities or persons as the Manager may determine from time to time in its absolute discretion.

During the Initial Offer Period, Shares are available for subscription at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to the following management fee of the Net Asset Value of each Class of Shares.

Management Fee (% of NAV) for each Share Class	
During the Subscription Period	Up to 0.20%
After the Subscription Period up to the end of year 1	Up to 1%
After the end of year 1 up to the end of year 2	Up to 1.4%
After the end of year 2 up to the end of year 3	Up to 1.75%
After the end of year 3 up to the end of year 4	Up to 2.10%
After the end of year 4	Up to 2.55%

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding, in which case, in order to avoid double charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors at their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FAM MEGATRENDS TARGET 2026 II
Legal entity identifier: 254900IZL5062SUWC016

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 5% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The environmental and/or social characteristics of this product include:

a. Minimum investment in funds in scope of Article 8 and 9 of the SFDR

The Fund will invest a minimum of 90% in Underlying Funds which fall within the meaning of either Article 8 or Article 9 of the SFDR, which means, that at a minimum, the majority of the Underlying Funds which the Fund holds promote environmental and social characteristics while investing in companies which follow good governance practices.

b. Positive Screening

Consideration of ESG factors are a key element of portfolio construction/fund selection. Portfolio managers will take a holistic approach which includes the analysis of ESG factors as part of their overall risk adjusted valuation assessment. This supports the overall promotion of investment in funds which the Manager deems desirable on ESG grounds. By incorporating positive ESG factors as part of the overall portfolio construction/fund selection, the Fund through its investments supports a tilt towards investment in Underlying Funds that have a more positive impact on the environment or society at large.

c. Fund Level ESG Scoring

A monthly independent analysis and classification of the Fund's ESG score is performed internally by the Manager. A minimum ESG scoring threshold is applied at Fund Level to ensure that the Fund's ESG score does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control serves to highlight a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers on ESG topics.

d. Negative Screening (Norm-based exclusions)

For any potential direct holdings the Manager applies norms-based exclusions based on its Exclusion Policy. The Manager wants its funds under management to avoid making any investments which the Manager or its clients might deem incompatible with minimum responsible investing principles. To align the Fund's investments with this sustainable investment approach, Manager have adopted a firm wide exclusion policy which screens all investments for their compliance with minimum international standards and norms, from which an Exclusion List is derived.

Exclusion categories considered in the Exclusion Policy are:

- United Nations Global Compact Principles
- Controversial Weapons
- Tobacco
- Climate Change
- Forced Labour

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Fund uses the following indicator;

i. The percentage of the Fund portfolio made in sustainable investments;

ii. the percentage of the Fund's Underlying Fund holdings rated A or above by MSCI ESG Manager (or another corresponding rating from a similar rating provider).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments that the Fund intends to make is to promote environmental and/or social characteristics. On the basis that the Fund is currently following

a fund of funds investment approach, the objectives of the sustainable investments that the Fund partially intends to make is linked to the sustainable investments made by the Underlying Funds. The Fund will seek to make investments in Underlying Funds that commit/partially commit to invest in sustainable investments and who have a process for ensuring that their sustainable investments are:

a. Made in investee companies that demonstrate good governance;

b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

c. Made in investee companies that make a positive contribution towards an environmental or social objective. The Fund may allocate between Underlying Funds which make sustainable investments of any type, i.e. investments with an environmental, and/or a social objective. The Fund is not required to favour any specific type of sustainable investment.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective based on the policies adopted by the relevant Underlying Fund investment managers. These policies are considered as part of the Manager's initial and ongoing investment due diligence procedures and are assessed for alignment with the indicators set out in Table 1 and any relevant additional indicator from Tables 2 and 3 of Annex I of the Delegated Regulation.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Principal adverse impact ("PAI") indicators are calculated at both the Fund level and the Underlying Fund level. The results will be compared with that of a chosen proxy benchmark representative of the Fund's investment universe and/or peers. These calculations will be used as the basis of assessment of adverse impacts on sustainability factors in order to determine whether the Manager can improve at Fund level and/or where Manager can engage with Underlying Fund investment managers to improve at the Underlying Fund level. For example, Manager may engage on disclosure if a certain metric is materially misaligned with that of the chosen proxy and/or peers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments which the Fund makes in the Underlying Funds and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are assessed in the following ways;

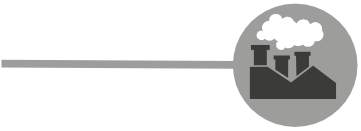
1. Via PAI monitoring of the following indicators;

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

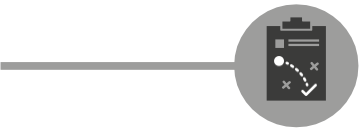
2. Through engagement with the Underlying Fund investment managers to ensure that the sustainable investments that the Underlying Funds makes are:

a. Made in investee companies that demonstrate good governance:



b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

c. Made in investee companies that make a positive contribution towards an environmental or social objective.



The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☑ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the Fund portfolio against mandatory and additional PAI indicators. Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report. The PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

☐ No

What investment strategy does this financial product follow?

The Fund is structured as a Fund giving a return to investors at the Maturity Date. The Fund is organised in a manner that it has two separate investment objectives for different time periods in the Fund's life, as set out below. Please refer to the supplement to the Prospectus titled "FAM Megatrends Target 2026 II" (the "Supplement") for definitions of "Maturity Date" and "Subscription Period".

1. During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund. The Manager will seek to achieve this objective by investing principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate

debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the “Initial Strategies”).

2. Following the Subscription Period, the investment objective of the Fund is to achieve long-term capital appreciation. The Fund seeks to achieve this investment objective in the following manner, as further set out in the Supplement:

    - By reducing the Fund’s allocation to Initial Strategies on a monthly basis (“Averaging Out”).

    - Every month the Fund will complete the Averaging Out process and the exposure to the Initial Strategies will be reduced and an exposure will be obtained to Underlying Funds as described in detail in the Supplement (the “Longer Term Strategies”).

As part of the Longer Term Strategies, the Fund may invest principally in Underlying Funds that have a primary focus on providing exposure to equities issued by companies operating in sectors and geographical regions that benefit from ongoing global megatrends.

Although the Fund does not have a specific sustainable investment objective, the Manager has fully integrated its ESG Policy into the overall investment process, in particular, the portfolio construction process.

As part of the process to undertake appropriate due diligence on investments, the Manager will generally conduct a level of research on each Underlying Fund which will give the Investment Manager an understanding of the investments underpinning same. This includes a quantitative and qualitative assessment as detailed in the "Investment Objective and Policies" section of the Supplement which involves scrutiny relating to each Underlying Fund's approach to ESG factors and consideration of Sustainability Risks.

The Manager integrates these ESG factors and this Sustainability Risk assessment into its investment research process and its risk management process – both initially and on an ongoing basis for the duration of the period the Fund holds an investment or pursues a particular investment strategy.

For investment in Underlying Funds, exclusions of the Underying Fund manager are assessed as part of the initial and ongoing due diligence process.

For any direct investment (i.e. non-underying fund investments), companies that are in breach of UN Global Compact principles (along with certain other Exclusion criteris) are excluded from the investment universe of the Fund as defined by the Manager. Where an investment is deemed inappropriate, no further investment may be made in the instrument, however existing holdings may be retained for a period of time to facilitate orderly divestment. For investment in underlying funds, exclusions of the underying fund manager are assessed as part of the initial and ongoing due diligence process.

For any direct investment (i.e. non-underying fund investments), the Manager recognises and adheres to the principle of responsible stewardship via sustainable proxy voting and collective enagement initiatives as a way of promoting good ESG policies.

The elements of the investment strategy to attain of the environmental or social characteristics promoted by this financial product as described above are systematically integrated throughout the investment process

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

  a. **Minimum investment in funds in scope of Article 8 and Article 9 SFDR**
  The Fund will invest a minimum of 90% in other funds which fall within the meaning of either Article 8 and/or Article 9 of the SFDR.

  b. **Minimum Underlying Fund score**
  80% of the Fund's Underlying Fund holdings will be rated A by MSCI ESG Manager (or an other corresponding rating from a similar rating provider). If the Sustainable Finance Committee of the Manager determines that the Underlying Fund in question has mitigating reasons for its MSCI ESG score to have fallen below A, the Underlying Fund holding may be maintained within the Fund portfolio.

  c. **Exclusion Policy**
  For any direct holdings (i.e. non-underying fund investments), the Manager's Exclusion Policy applies, and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein.

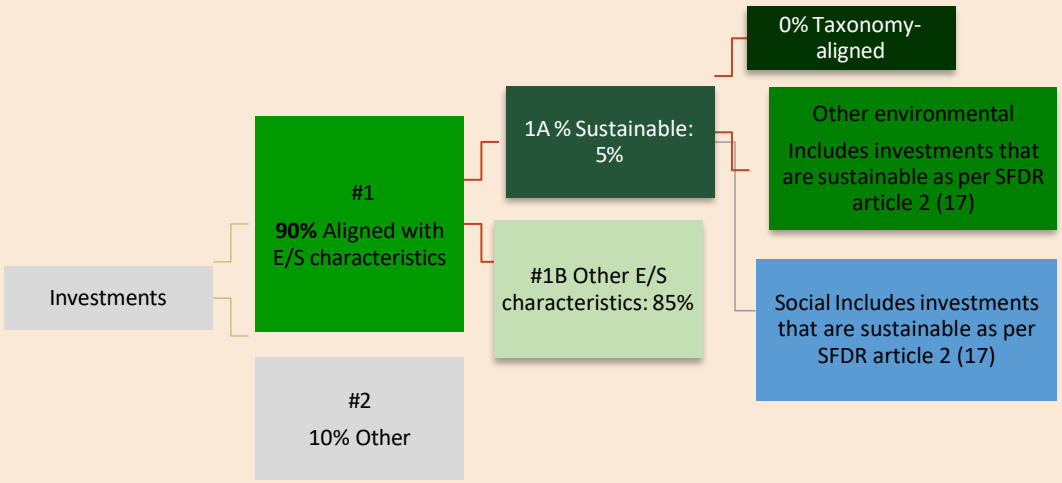
- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

  Not applicable

- ***What is the policy to assess good governance practices of the investee companies?***

  Good governance is assessed for Underlying Funds through engagement with the Underlying Fund manager via due diligence.

  In addition, ensuring that a minimum of 90% of the portfolio is invested in funds which fall within the meaning of Article 8 or 9 of the SFDR, demonstrates that the Manager is limiting the Fund's investment universe of Underlying Funds to focus on those investment funds that must only invest in investee companies that demonstrate good governance practices (in compliance with SFDR).



Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments means the Fund's Net Asset Value which is the total market value of the product.

At least 80% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund. The Financial product also comments to a minimum proportion of 5% in sustainable investments. The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

The asset allocation may change over time and percentages may be updated in this appendix from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate underlying fund manager data and/or company or third-party data.

***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**

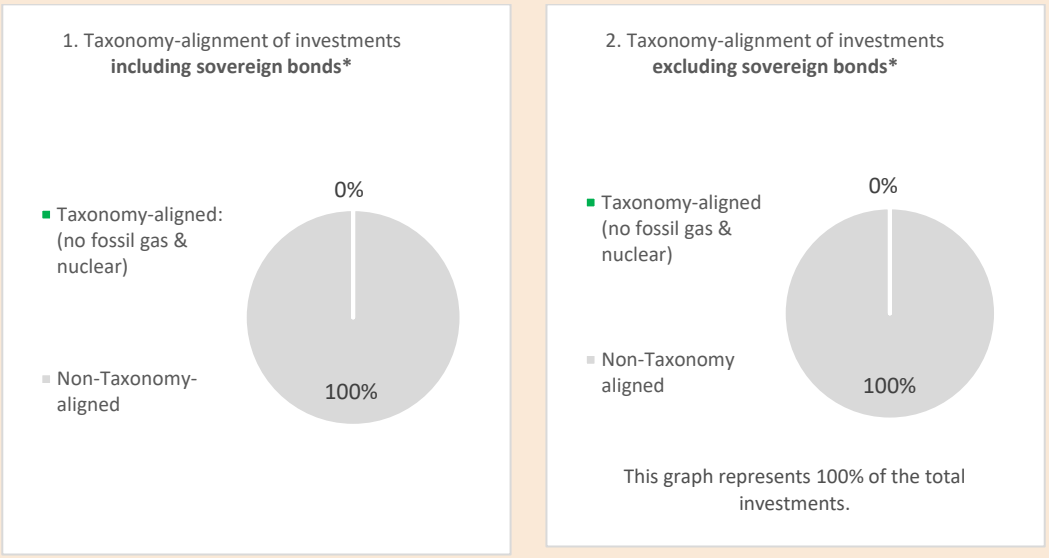
Derivatives are not used to attain the environmental or social characteristics promoted by this Fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities are** activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the best performance.

As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy1?

Yes:

In fossil gas In nuclear energy

No: X

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What is the minimum share of investments in transitional and enabling activities? 0%.

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

5%*.

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

5%*

*The Fund commits to invest at least 5% of its assets in sustainable investments. Within this overall commitment, there is no prioritisation of environmental and/or social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the Manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the managers exclusion policy.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Responsible Investment Policy, summary investment process and Exclusion Policy can be found on the Manager's website at the following link FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)

FAM SUSTAINABLE TARGET 2023 II

SUPPLEMENT DATED 21 MAY 2025

This Supplement contains specific information in relation to **FAM Sustainable Target 2023 II** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. An investment in the Fund involves certain investment risks, including the possible loss of principal. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Maturity Date	23 March 2023
Subscription Period	means the 60 calendar days following the end of Initial Offer Period or such longer or shorter period, as may be determined by the Directors in accordance with the requirements of the Central Bank.

Investment Objective and Policies

The Fund is being structured as a Fund giving a return to investors at the Maturity Date. The Fund is organised in a manner that it has two separate investment objectives for different time periods in the Fund's life as follows, and as explained in detail in each sub-section below:

1. **During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund; and**
2. **Following the Subscription Period, the investment objective of the Fund is to achieve long-term capital appreciation**.

As stated above, the main investment objective of the Fund is as set out in (2) above and in the section headed "After the Subscription Period and up to the Maturity Date". The reason for having a Subscription Period is to have a short 60 day time period during which the Fund will accept subscriptions and invest them in a manner designed to seek to achieve a positive investment return whilst maintaining liquidity for the Fund. After the Subscription Period subscriptions into the Fund are no longer accepted. Although the Fund will be closed for subscriptions after the Subscription Period, requests for redemptions received prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day (i.e. each Business Day) in accordance with the section of the Prospectus entitled **"**Redemption of Shares".

During the Subscription Period

During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund. The Manager will seek to achieve this objective by investing principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

Investment in the Initial Strategies will be selected on the basis that will result in the Fund having a weighted average interest rate duration of no longer than 2 years.

Selection of debt instruments

The debt instruments that may be part of the Initial Strategies will selected based on the Manager's top-down analysis, which includes a view on the global investment outlook and analysis of market opportunities and securities based on an assessment of factors such as income yield, credit risk and bond duration. The Manager's will assess each individual bond and the bond markets to understand the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the bonds under assessment. Following such credit assessment, the Manager appraises a potential investment in a bond in terms of relative value when compared to other bonds that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which bonds to acquire on behalf of the Fund. When an investment in a bond is made, it will be closely monitored by the Manager taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such bond will be kept under review by the Manager. The Manager may invest substantially or fully in government bonds issued by any Member State.

After the Subscription Period and up to the Maturity Date

Following the Subscription Period, the investment objective of the Fund is to achieve long-term capital appreciation.

The Fund seeks to achieve this objective in the following manner:

1. By reducing the Fund's allocation to Initial Strategies on a monthly basis ("Averaging Out").

   For example, it is anticipated that following the last day of the Subscription Period and on a monthly basis the Fund's asset allocation to Initial Strategies will reduce on average by 4.54% of the Fund's assets.

   The Manager, based on their discretion, can alter the above monthly amount by accelerating the reduction to the Initial Strategies according to their view of market conditions. The Manager's view on market conditions will be informed by a proprietary quantitative model designed by the Manager which is described below (the "Quant Model"). Each monthly reduction will be followed by a corresponding investment by the Fund into the Longer Term Strategies (described at point 2 below). This Averaging Out will continue every month up to the Maturity Date.

   The Manager will run the Quant Model in order to analyse market conditions which will inform them as to how much they should accelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies.

   This proprietary Quant Model allows the Manager assess market conditions using quantifiable, definitive and numerical data that can be used for checking portfolio return robustness via historical simulations; i.e. it is analysis on documented and definitive information on the past performance of the relevant market. The Quant Model will be based on technical and market indicators such as the relative strength index which analyses the historical strength or weakness of a stock or market based on closing prices of a recent trading period. The analysis produced by the Quant Model allows the Manager take advantage of favourable market conditions when assessing whether or not to increase the Averaging Out amount above 4.54% a month. Favourable market conditions in this context mean conditions that, once the Manager has run the Quant Model and assessed the resulting data and market indicators arising from the running of the Quant Model, indicate to the Manager that it is favourable for the Manager to accelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies at a favourable price.

   The Averaging Out process will occur every month, following the last day of the Subscription Period, for approximately 22 months up to the Maturity Date. At the Maturity Date, the Fund will be fully invested in the Longer Term Strategies. The gradual exposure of Shareholders to the Longer Term Strategies allows Shareholders obtain a diversified exposure to the market while neutralizing the effect of short-term price fluctuations in the broader market. In addition, the Quant Model allows the Manager the discretion to take advantage of favourable market conditions (described above) in respect of potentially accelerating Shareholders exposure to the Longer Term Strategies.

2. As described above, every month the Fund will complete the Averaging Out process and the exposure to the Initial Strategies will be reduced and an exposure will be obtained to Underlying Funds as described in detail immediately below (the "Longer Term Strategies"). As part of the Longer Term Strategies the Fund:

I. may invest principally in Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world, and which take account of any one or all of the following considerations, environmental, social responsibility and governance ("ESG"), as described below,

ESG considerations concern the selection of securities which provide exposure to organisations which hold the highest standards of sustainability, ethics and/or corporate governance.

The environmental element of ESG may look at how an organisation performs as a steward of the natural environment. The social element of ESG may examine how an organisation manages relationships with its employees, service providers and the community at large. The governance element of ESG may consider how an organisation's leadership, executive pay, audits and internal controls work whilst also understanding how shareholders are given the appropriate voting rights.

As responsible investing is the main focus of the Fund, the Manager will, in addition to the criteria outlined in the section entitled "Selection of Underlying Funds", seek to identify Underlying Funds managed by investment managers which have a commitment to responsible investing and which take account of the ESG criteria as described above. The Manager may do this by analysing if the relevant fund manager of the Underlying Fund is:

- A signatory to the United Nations supported Principles for Responsible Investment organisation or similar body which encourages a responsible approach to investing;
- Incorporating the assessment of ESG factors such as waste and pollution, working conditions and board diversity and structure as a key part of their investment process in identifying and evaluating a potential purchase or disposal of an investment;
- Employing a dedicated ESG analyst or team in respect of the implementation of their ESG strategy; and
- Actively engaging with companies in which they are invested and using their shareholder voting rights to promote ESG standards in these companies.

In the selection of the Underlying Funds the Manager will also assess whether or not the Underlying Fund has a sustainability rating or score provided by a recognised data service provider; and

II. may invest up to 20% of its Net Asset Value in units of Underlying Funds managed with absolute return investment strategies. These strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. These strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements;

III. may invest up to 20% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate.

At any time, the Fund may only have a maximum exposure of 30%, either directly or through Underlying Funds, to non-Investment Grade debt securities.

Selection of Underlying Funds

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which make up the Initial Strategies and the Longer Term Strategies.
The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in instruments that make up the Initial Strategies and Longer Term Strategies, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the

Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Fund also being managed by the Manager.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested "alternative investment funds" ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to

reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.
Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to

hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund
as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the MSCI World Net Total Return Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility. The Fund is not designed for investors who need current income.

Base Currency: Euro.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.[1]

SFDR Disclosure

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.**

[1] The Fund currently follows a fund of funds investment approach and can invest principally in UCITS or other investment funds that are eligible for investment by a UCITS as set out in the Prospectus and this Supplement. The Manager therefore relies on data provided by the investment managers of the Underlying Fund investments when calculating the minimum percentage proportion of sustainable investment of the Fund and when calculating the percentages required in the section of Annex II dealing with the planned asset allocation of the Fund.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk and the Paris Aligned Benchmark Exclusions (the "**PAB Exclusions**").

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	**Initial Offer Price**	**Initial Offer Period**	**Currency Denomination and Hedged Class**		**Sales Charge**	**Minimum Initial Subscription and Minimum Subsequent Subscription**	**Distribution Type**
Class L Acc	€100	08 March 2021 – 23 March 2021	Euro	No	Up to 2%	€1,000 / €100	Accumulating
Class D Acc	€100	08 March 2021 0 –23 March 2021	Euro	No	No	€500 / €100	Accumulating

*Class D Shares in the Fund shall only be made available for subscription to such entities or persons as the Manager may determine from time to time in its absolute discretion.

During the Initial Offer Period, Shares are available for subscription at the Initial Offer Price, as indicated directly above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to the following management fee of the Net Asset Value of each Class of Shares:

Management Fee (% of NAV) of each Share Class	
During the Subscription Period	Up to 0.20%
After the Subscription Period up to the end of year 1	Up to 1.5%
After the end of year 1 up to the end of year 2	Up to 2.5%
After the end of year 2	Up to 2.5%

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first two years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Sales Charge
Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding, in which case, in order to avoid double charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: FAM SUSTAINABLE TARGET 2023 II
Legal entity identifier: 254900YQQU7KALIQEI80

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective: ___%**	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 51% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective: ___%**	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The environmental and/or social characteristics of this product include:

a. **Minimum investment in funds falling within the meaning of Article 8 and 9 of the SFDR**

The Fund will invest a minimum of 90% in underlying funds classified as falling within the meaning of either Article 8 and/or Article 9 under SFDR, which means, that at a minimum, the majority of the underlying funds which the Fund holds promote

environmental and social characteristics while investing in companies which follow good governance practices.

b. Positive Screening

Consideration of environmental, social and governance ("ESG factors") are a key element of portfolio construction/fund selection. Portfolio managers will take a holistic approach which includes the analysis of ESG factors as part of their overall risk adjusted valuation assessment. This supports the overall promotion of investment in funds which the Manager deems desirable on ESG grounds. By incorporating positive ESG factors as part of the overall portfolio construction/fund selection, the Fund through its investments supports a tilt towards investment in underlying funds that have a more positive impact on the environment or society at large.

c. Fund Level ESG Scoring

A monthly independent analysis and classification of the Fund's ESG score is performed internally by the Manager. A minimum ESG scoring threshold is applied at Fund level to ensure that the Fund's ESG score does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control serves to highlight a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers on ESG topics.

d. Negative Screening (Norm-based exclusions)

For any potential direct holdings the Manager applies its basic exclusions (the "**Basic Exclusions**") as well as the PAB Exclusions in accordance with its Exclusion Policy. The Manager wants its funds under management to avoid making any investments which the Manager or its clients might deem incompatible with minimum responsible investing principles. To align the Fund's investments with this sustainable investment approach, Manager have adopted a firm wide exclusion policy which screens all investments for their compliance with minimum international standards and norms, from which an Exclusion List is derived..

Those exclusions currently include:

a. Issuers that breach the principles of the United Nations Global Compact;
b. Issuers involved in the manufacture or product life cycle of controversial weapons including biological and chemical weapons, cluster munitions and sub-munitions, depleted uranium, landmines including antipersonnel mine and nuclear weapons);
c. Issuers involved in the cultivation and production of tobacco
d. Issuers that derive 1% or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;
e. Issuers that derive 10% or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;
f. Issuers that derive 50% or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;
g. Issuers that derive 50% or more of their revenues from electricity generation with a GHF intensity of more than 100g C02 e/kWh
h. Issuers that contravene the United Nations Global Company labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards

The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy and the PAB Exclusions.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted.

- ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Fund uses the following indicator;

i. The percentage of the Fund portfolio made in sustainable investments;

ii. the percentage of the Fund's underlying fund holdings rated A by MSCI ESG Manager (or an other corresponding rating from a similar rating provider).

- ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments that the Fund intends to make is to promote environmental and/or social characteristics. On the basis that the Fund is currently following a fund of funds investment approach, the objectives of the sustainable investments that the Fund partially intends to make is linked to the sustainable investments made by the underlying funds. The Fund will seek to make investments in underlying funds that commit/partially commit to invest in sustainable investments and who have a process for ensuring that their sustainable investments are:

a. Made in investee companies that demonstrate good governance;

b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

c. Made in investee companies that make a positive contribution towards an environmental or social objective. The Fund may allocate between underlying funds which make sustainable investments of any type, i.e. investments with an environmental, and/or a social objective. The Fund is not required to favour any specific type of sustainable investment.

- ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective based on the policies adopted by the relevant underlying fund investment managers. These policies are considered as part of the Manager's initial and ongoing investment due diligence procedures and are assessed for alignment with the indicators set out in Table 1 and any relevant additional indicator from Tables 2 and 3 of Annex I of the Delegated Regulation and the approach taken by the Manager.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Principal adverse impact ("PAI") indicators are calculated at both the Fund level and the underlying fund level. The results will be compared with that of a chosen proxy benchmark representative of the Fund's investment universe and/or peers. These calculations will be used as the basis of assessment of adverse impacts on sustainability factors in order to determine whether the Manager can improve at Fund level and/or where Manager can engage with underlying fund investment managers to improve at the underlying fund level. For example, Manager may engage on disclosure if a certain metric is materially misaligned with that of the chosen proxy and/or peers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments which the Fund makes in the underlying funds and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are assessed in the following ways;

1. Via PAI monitoring of the following indicators;

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

2. Through engagement with the underlying fund investment managers to ensure that the sustainable investments that the underlying funds makes are:

    a. Made in investee companies that demonstrate good governance:

    b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

    c. Made in investee companies that make a positive contribution towards an environmental or social objective.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

☒ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the Fund portfolio against mandatory and additional PAI indicators. Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report. The PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

☐ No

What investment strategy does this financial product follow?

The Fund is structured as a Fund giving a return to investors at the Maturity Date. The Fund is organised in a manner that it has two separate investment objectives for different time periods in the Fund's life, as set out below. Please refer to the supplement to the Prospectus titled "FAM Sustainable Target 2023 II" (the "Supplement") for definitions of "Maturity Date" and "Subscription Period".

1. During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund. The Manager will seek to achieve this objective by investing principally, either directly, or indirectly via units of underlying funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

2. Following the Subscription Period, the investment objective of the Fund is to achieve long-term capital appreciation. The Fund seeks to achieve this objective in the following manner:

- By reducing the Fund's allocation to Initial Strategies on a monthly basis ("Averaging Out").

- Every month the Fund will complete the Averaging Out process and the exposure to the Initial Strategies will be reduced and an exposure will be obtained to underlying funds as described in detail in the Supplement (the "Longer Term Strategies").

As part of the Longer Term Strategies the Fund, the Fund may invest up to 100% of the Fund's assets in underlying funds that provide exposure to equities issued by companies incorporated anywhere in the world, and which take account of a number of ESG factors.

Although the Fund does not have a specific sustainable investment objective, the Fund will pursue an investment strategy that seeks to identify the best investment opportunities by integrating financial analysis with environmental, social responsibility and governance considerations. In order to meet such extra-financial characteristics, the target funds or the assets held directly by the Fund are assessed as related to sustainable and social criteria and where applicable, they must have an explicit commitment to responsible investing as per their investment process.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The ESG rating of each instrument held by the Fund should be reflected in an assessment, and ultimately in the decision on whether to invest in such instrument. The Fund will invest, directly or indirectly through open-ended UCIs and UCITS, in instruments that have better social or environmental ratings and/or are issued by issuers with better social or environmental practices. For example as stated above, the Fund currently intends to invest a minimum of 90% in other funds classified as either Article 8 and/or Article 9 under SFDR, which means, that at a minimum, the majority of the underlying funds which the Fund holds promote environmental and social characterisictics while investing in companies which follow good governance practices.

The Manager also maintains due diligence processes to assess the ESG commitments of underlying investments and underlying fund managers. To this end, the Manager, reviews and assesses on a periodic basis private and public information related to each issuer and/or relevant underlying fund manager, as applicable, and its ESG rating or characteristics. In addition to such assessment, the Manager will obtain from each issuer (and/or the relevant underlying fund manager, as the case may be), which has been selected for investment by the Fund, any information necessary to assess the ESG rating or characteristics of the relevant underlying investment.

For any direct investment (i.e. non-underying fund investments), companies that are in breach of UN Global Compact principles (along with certain other Exclusion criteris) are excluded from the investment universe of the Fund as defined by the Manager. Where an investment is deemed inappropriate, no further investment may be made in the instrument, however existing holdings may be retained for a period of time to facilitate orderly divestment. For investment in underlying funds, exclusions of the underying fund manager are assessed as part of the initial and ongoing due diligence process.

For any direct investment (i.e. non-underying fund investments), the Manager recognises and adheres to the principle of responsible stewardship via sustainable proxy voting and collective enagement initiatives as a way of promoting good ESG policies.

The elements of the investment strategy to attain of the environmental or social characteristics promoted by this financial product as described above are systematically integrated throughout the investment process

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

  a. **Minimum investment in funds falling within the meaning of Article 8 and Article 9 of the SFDR**
  The Fund will invest a minimum of 90% in other funds classified as falling within the meaning of either Article 8 and/or Article 9 under the SFDR.

  b. **Minimum underlying fund score**
  80% of the Fund's underlying fund holdings will be rated A by MSCI ESG Manager (or an other corresponding rating from a similar rating provider). If the Sustainable Finance Committee of the Manager determines that the underlying fund in question has mitigating reasons for its MSCI ESG score to have fallen below A, the underlying fund holding may be maintained within the Fund portfolio.

  c. **Exclusion Policy**
  For any direct holdings (i.e. non-underying fund investments), the Manager's Exclusion Policy applies, and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

  Not applicable

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

- ***What is the policy to assess good governance practices of the investee companies?***

  Good governance is assessed for underlying funds through engagement with the underlying fund manager via due diligence.

  In addition, ensuring that a minimum of 90% of the portfolio is invested in funds falling within the meaning of Article 8 or Article 9 of the SFDR, demonstrates that the Manager is limiting the Fund's investment universe of underlying funds to focus on those investment

funds that must only invest in investee companies that demonstrate good governance practices (in compliance with SFDR).

In addition, direct holdings (i.e. non-underlying fund investments) in the Fund must have a minimum rating of BB according to MSCI ESG Manager (or an other corresponding rating from a similar rating provider). This ensures a level of good governance vis a vis the above scores. Limited exceptions to this rule may apply.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments means the products Net Asset Value which is the total market value of the product.

At least 90% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund. The Financial product also comments to a minimum proportion of 51% in sustainable investments. The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

The asset allocation may change over time and percentages may be updated in this appendix from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate underlying fund manager data and/or company or third-party data.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

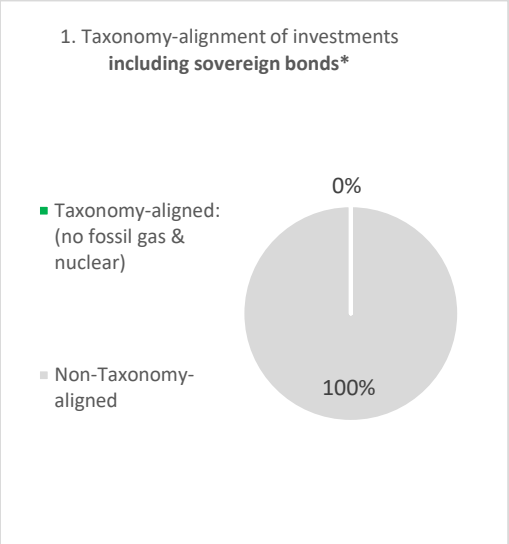
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities are** activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the best performance.

***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**

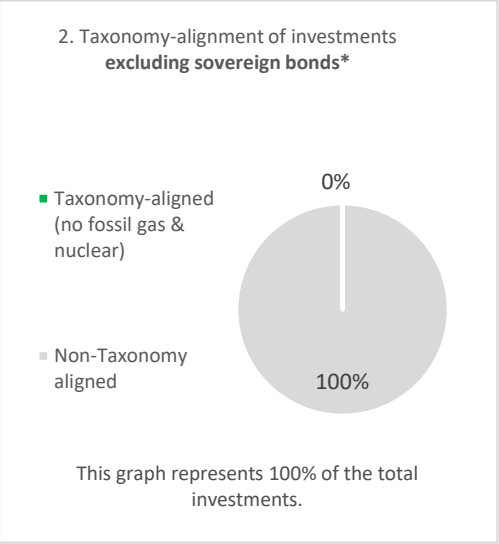
Derivatives are not used to attain the environmental or social characteristics promoted by this Fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy1?



Yes:

In fossil gas In nuclear energy

No: X

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities? 0%.
There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?
51%*.

What is the minimum share of socially sustainable investments?
51%*.

*The Fund commits to invest at least 51% of its assets in sustainable investments. Within this overall commitment, there is no prioritisation of environmental and/or social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the Manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the Managers Exclusion Policy.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

FAM MEGATRENDS TARGET VIII

SUPPLEMENT DATED 30 JUNE 2025

This Supplement contains specific information in relation to **FAM MegaTrends Target VIII** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset- management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 1 December 2022, and each addendum thereto (together the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. An investment in the Fund involves certain investment risks, including the possible loss of principal. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Subscription Period	The original Subscription Period closed in 2021 (the **Original Subscription Period**). The subsequent Subscription Period means the 60 calendar days from 1 July 2025 to 1 September 2025 or such longer or shorter period, as may be determined by the Directors and on a quarterly basis thereafter at the discretion of the Directors and once notified in advance to Shareholders. Shares will be available for subscription during this time, at the prevailing Net Asset Value (NAV) per Share.

Investment Objective and Policies

The investment objective of the Fund is to achieve long-term capital appreciation.

The Fund:

I. may invest principally in Underlying Funds that provide exposure to equities issued by companies operating in sectors and geographical regions that benefit from ongoing global megatrends.

Global megatrends ("Megatrends") are generally defined as global forces of development that create fundamental shifts in the progress of society thus impacting business, the economy, culture and the way we live. Examples of Megatrends that are currently reshaping our world are: demographic and social changes, climate change and resource scarcity, technological breakthroughs and rapid urbanization. Megatrends evolve independently of the economic cycle and, thus, possess the capacity to continuously redraw the financial landscape. By underpinning these Megatrends, it is possible to identify investment sub-themes which act as both drivers and beneficiaries of these Megatrends.

A summary of some of the sub-themes of the abovementioned Megatrends prevalent in the world today are listed below. Potential Shareholders should be aware that the below listed headings are examples of certain sub-themes of Megatrends and are for illustrative purposes only. It is important for potential Shareholders to note that what constitutes a

Megatrend sub-theme today may not be classed as such in the future. This is not intended to be an exhaustive list and these sub-themes have the ability to change over time. Therefore, the Fund does not commit to definitively invest in each or all of these Megatrend sub-themes at any time:

- Ageing Population: The ageing of the world's population is widely considered one of the most enduring demographic shifts in human history. Companies which have a focus on improving developments in healthcare, developments in Biotechnology and shifting consumer trends leading to a longer life expectancy are in a position to benefit greatly from this trend;
- Oncology: With cancer diagnoses expected to increase in the next 20 years, companies which are committing capital to cancer research to develop better diagnostics to cure cancer are in a position to benefit from developments in the treatment of cancer;
- Water: Population growth, urbanization and water-intensive dietary changes are adding to rising industrial water demand. Companies at the forefront of new technologies required to accommodate increasing global demand for water are well placed to benefit from this trend;
- Electric & Autonomous Vehicles: With a shift away from internal combustion engine vehicles and movement toward the broad usage of autonomous vehicles, manufacturers of both electric and autonomous vehicles as well as their components and other companies in the supply chain all stand to be beneficiaries from this trend; and
- Drones: Extensive growth in consumer and commercial drone usage means that companies involved in the production of these technologies will benefit from this evolving trend.

II. may invest up to 20% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate;

III. may invest up to 20% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and

At any time, the Fund may only have a maximum exposure of 30%, either directly or through Underlying Funds, to non-Investment Grade debt securities.

Selection of Underlying Funds

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential

investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds being managed by the Manager.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on the Recognised Markets.

Underlying Funds
The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in alternative investment funds ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, theUnited States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset

or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the MSCI World Net Total Return Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility. The Fund is not designed for investors who need current income.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest in companies that follow good governance practices, as further described in the Annex II at the end of this Supplement [1]

SFDR Disclosure

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of the SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	**Initial Offer Price**	**Initial Offer Period**	**Currency Denomination and Hedged Class**		**Sales Charge**	**Minimum Initial Subscription and Minimum Subsequent Subscription**	**Distribution Type**
Class L Acc	€100	Closed	Euro	No	Up to 2%	€1,000 / €100	Accumulating
Class D Acc	€100	Closed	Euro	No	No	€500 / €100	Accumulating

[1] The Fund currently follows a fund of funds investment approach and can invest principally in UCITS or other investment funds that are eligible for investment by a UCITS as set out in the Prospectus and this Supplement. The Manager therefore relies on data provided by the investment managers of the Underlying Fund investments when calculating the minimum percentage proportion of sustainable investment of the Fund and when calculating the percentages required in the section of Annex II dealing with the planned asset allocation of the Fund.

*Class D Shares in the Fund shall only be made available for subscription to such entities or persons as the Manager may determine from time to time in its absolute discretion.

During the Initial Offer Period, Shares are available for subscription at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to the following management fee of the Net Asset Value of each Class of Shares:

Management Fee (% of NAV) for each Share Class	
During the Original Subscription Period	Up to 0.20%
After the Original Subscription Period up to the end of year 1	Up to 1.50%
After the end of year 1 up to the end of year 2	Up to 2.50%
After the end of year 2	Up to 2.50%

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding, in which case, in order to avoid double charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first two years of the Fund's operation (or such other period as may be determined by the Directors at their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FAM MEGATRENDS TARGET VIII
Legal entity identifier: 254900CGGO46RJM4YA73

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective: ___%**	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 15% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	with a social objective
☐ It will make a minimum of **sustainable investments with a social objective: ___%**	It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The environmental and/or social characteristics of this product include:

a. Minimum investment in funds in scope of Article 8 and 9 of the SFDR

The Fund will invest a minimum of 90% in Underlying Funds which fall within the meaning of either Article 8 or Article 9 of the SFDR, which means, that at a minimum, the majority of the Underlying Funds which the Fund holds promote environmental and social characteristics while investing in companies which follow good governance practices.

b. Positive Screening

Consideration of ESG factors are a key element of portfolio construction/fund selection. Portfolio managers will take a holistic approach which includes the analysis of ESG factors as part of their overall risk adjusted valuation assessment. This supports the overall promotion of investment in funds which the Manager deems desirable on ESG grounds. By incorporating positive ESG factors as part of the overall portfolio construction/fund selection, the Fund through its investments supports a tilt towards investment in Underlying Funds that have a more positive impact on the environment or society at large.

c. Fund Level ESG Scoring

A monthly independent analysis and classification of the Fund's ESG score is performed internally by the Manager. A minimum ESG scoring threshold is applied at Fund Level to ensure that the Fund's ESG score does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control serves to highlight a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers on ESG topics.

d. Negative Screening (Norm-based exclusions)

For any potential direct holdings the Manager applies norms-based exclusions based on its Exclusion Policy. The Manager wants its funds under management to avoid making any investments which the Manager or its clients might deem incompatible with minimum responsible investing principles. To align the Fund's investments with this sustainable investment approach, Manager have adopted a firm wide exclusion policy which screens all investments for their compliance with minimum international standards and norms, from which an Exclusion List is derived..

Exclusion categories considered in the Exclusion Policy are:

- United Nations Global Compact Principles
- Controversial Weapons
- Tobacco
- Climate Change
- Forced Labour

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Fund uses the following indicator;

i. The percentage of the Fund portfolio made in sustainable investments;

ii. the percentage of the Fund's Underlying Fund holdings rated A or above by MSCI ESG Manager (or another corresponding rating from a similar rating provider).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments that the Fund intends to make is to promote environmental and/or social characteristics. On the basis that the Fund is currently following

a fund of funds investment approach, the objectives of the sustainable investments that the Fund partially intends to make is linked to the sustainable investments made by the Underlying Funds. The Fund will seek to make investments in Underlying Funds that commit/partially commit to invest in sustainable investments and who have a process for ensuring that their sustainable investments are:

a. Made in investee companies that demonstrate good governance;

b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

c. Made in investee companies that make a positive contribution towards an environmental or social objective. The Fund may allocate between Underlying Funds which make sustainable investments of any type, i.e. investments with an environmental, and/or a social objective. The Fund is not required to favour any specific type of sustainable investment.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective based on the policies adopted by the relevant Underlying Fund investment managers. These policies are considered as part of the Manager's initial and ongoing investment due diligence procedures and are assessed for alignment with the indicators set out in Table 1 and any relevant additional indicator from Tables 2 and 3 of Annex I of the Delegated Regulation.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Principal adverse impact ("PAI") indicators are calculated at both the Fund level and the Underlying Fund level. The results will be compared with that of a chosen proxy benchmark representative of the Fund's investment universe and/or peers. These calculations will be used as the basis of assessment of adverse impacts on sustainability factors in order to determine whether the Manager can improve at Fund level and/or where Manager can engage with Underlying Fund investment managers to improve at the Underlying Fund level. For example, Manager may engage on disclosure if a certain metric is materially misaligned with that of the chosen proxy and/or peers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments which the Fund makes in the Underlying Funds and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are assessed in the following ways;

1. Via PAI monitoring of the following indicators;

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

2. Through engagement with the Underlying Fund investment managers to ensure that the sustainable investments that the Underlying Funds makes are:

a. Made in investee companies that demonstrate good governance:

b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

c. Made in investee companies that make a positive contribution towards an environmental or social objective.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

✖ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the Fund portfolio against mandatory and additional PAI indicators. Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report. The PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

☐ No

What investment strategy does this financial product follow?

The

investment objective of the Fund is to achieve long-term capital appreciation. The

Fund may invest principally in Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world, and which take account of a number of ESG factors, as further described in the Supplement.

Although the Fund does not have a specific sustainable investment objective, the Manager has fully integrated its ESG Policy into the overall investment process, in particular, the portfolio construction process.

As part of the process to undertake appropriate due diligence on investments, the Manager will generally conduct a level of research on each Underlying Fund which will give the Investment Manager an understanding of the investments underpinning same. This includes a quantitative and qualitative assessment as detailed in the "Investment

Objective and Policies" section of the Supplement which involves scrutiny relating to each Underlying Fund's approach to ESG factors and consideration of Sustainability Risks.

The Manager integrates these ESG factors and this Sustainability Risk assessment into its investment research process and its risk management process – both initially and on an ongoing basis for the duration of the period the Fund holds an investment or pursues a particular investment strategy.

For investment in Underlying Funds, exclusions of the Underying Fund manager are assessed as part of the initial and ongoing due diligence process.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

For any direct investment (i.e. non-underying fund investments), companies that are in breach of UN Global Compact principles (along with certain other Exclusion criteris) are excluded from the investment universe of the Fund as defined by the Manager. Where an investment is deemed inappropriate, no further investment may be made in the instrument, however existing holdings may be retained for a period of time to facilitate orderly divestment. For investment in underlying funds, exclusions of the underying fund manager are assessed as part of the initial and ongoing due diligence process.

For any direct investment (i.e. non-underying fund investments), the Manager recognises and adheres to the principle of responsible stewardship via sustainable proxy voting and collective enagement initiatives as a way of promoting good ESG policies.

The elements of the investment strategy to attain of the environmental or social characteristics promoted by this financial product as described above are systematically integrated throughout the investment process

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

a. **Minimum investment in funds in scope of Article 8 and Article 9 SFDR**
The Fund will invest a minimum of 90% in other funds which fall within the meaning of either Article 8 and/or Article 9 of the SFDR.

b. **Minimum Underlying Fund score**
80% of the Fund's Underlying Fund holdings will be rated A by MSCI ESG Manager (or an other corresponding rating from a similar rating provider). If the Sustainable Finance Committee of the Manager determines that the Underlying Fund in question has mitigating reasons for its MSCI ESG score to have fallen below A, the Underlying Fund holding may be maintained within the Fund portfolio.

c. **Exclusion Policy**
For any direct holdings (i.e. non-underying fund investments), the Manager's Exclusion Policy applies, and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein.

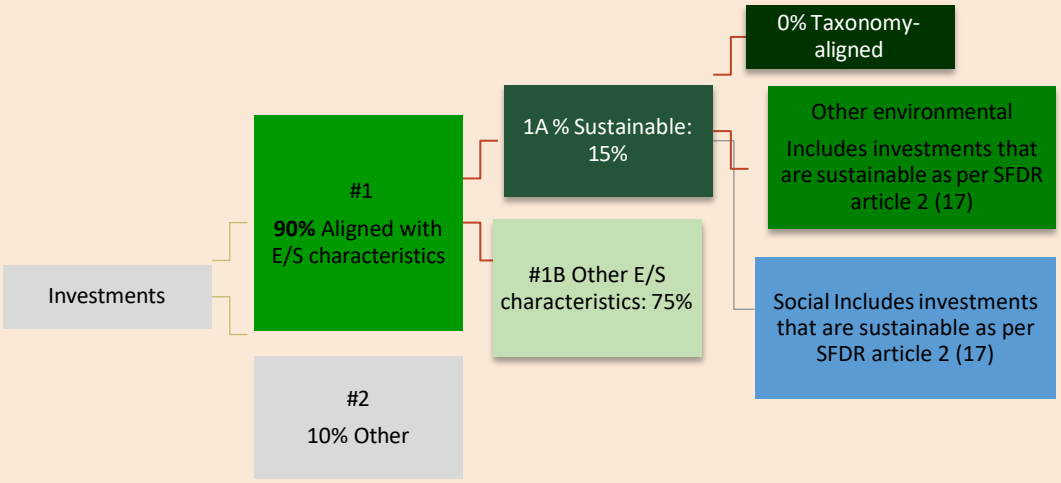
What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

Not applicable

What is the policy to assess good governance practices of the investee companies?

Good governance is assessed for Underlying Funds through engagement with the Underlying Fund manager via due diligence.

In addition, ensuring that a minimum of 90% of the portfolio is invested in funds which fall within the meaning of Article 8 or 9 of the SFDR, demonstrates that the Manager is limiting the Fund's investment universe of Underlying Funds to focus on those investment funds that must only invest in investee companies that demonstrate good governance practices (in compliance with SFDR).



Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments means the Fund's Net Asset Value which is the total market value of the product.

At least 80% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund. The Financial product also comments to a minimum proportion of 15% in sustainable investments. The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

The asset allocation may change over time and percentages may be updated in this appendix from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate underlying fund manager data and/or company or third-party data.

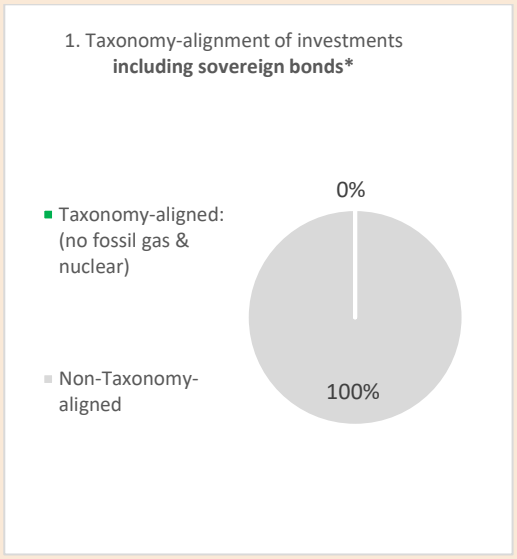
- ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**
  Derivatives are not used to attain the environmental or social characteristics promoted by this Fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

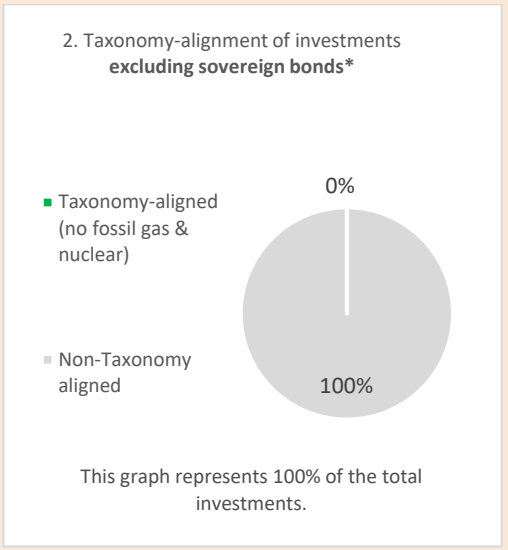
- As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities are** activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the best performance.



0% of its assets in investments aligned with the Taxonomy Regulation.**Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[1]?**



Yes:

In fossil gas In nuclear energy

No X

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities? 0%.

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

15%*.

What is the minimum share of socially sustainable investments?

15%*

*The Fund commits to invest at least 15% of its assets in sustainable investments. Within this overall commitment, there is no prioritisation of environmental and/or social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the Manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the managers exclusion policy.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Fund, including the Responsible Investment Policy and Exclusion Policy can be found on the Manager's website at the following link FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)

FAM SUSTAINABLE TARGET 2026

SUPPLEMENT DATED 21 MAY 2025

This Supplement contains specific information in relation to **FAM Sustainable Target 2026** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. An investment in the Fund involves certain investment risks, including the possible loss of principal. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Maturity Date	23 March 2026
Subscription Period	means the 60 calendar days following the end of Initial Offer Period or such longer or shorter period, as may be determined by the Directors in accordance with the requirements of the Central Bank.

Investment Objective and Policies

The Fund is being structured as a Fund giving a return to investors at the Maturity Date. The Fund is organised in a manner that it has two separate investment objectives for different time periods in the Fund's life as follows, and as explained in detail in each sub-section below:

1. **During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund; and**
2. **Following the Subscription Period, the investment objective of the Fund is to achieve long-term capital appreciation**.

As stated above, the main investment objective of the Fund is as set out in (2) above and in the section headed "After the Subscription Period and up to the Maturity Date". The reason for having a Subscription Period is to have a short 60 day time period during which the Fund will accept subscriptions and invest them in a manner designed to seek to achieve a positive investment return whilst maintaining liquidity for the Fund. After the Subscription Period subscriptions into the Fund are no longer accepted. Although the Fund will be closed for subscriptions after the Subscription Period, requests for redemptions received prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day (i.e. each Business Day) in accordance with the section of the Prospectus entitled **"**Redemption of Shares".

During the Subscription Period

During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund. The Manager will seek to achieve this objective by investing principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

Investment in the Initial Strategies will be selected on the basis that will result in the Fund having a weighted average interest rate duration of no longer than 4.5 years.

Selection of debt instruments

The debt instruments that may be part of the Initial Strategies will selected based on the Manager's top-down analysis, which includes a view on the global investment outlook and analysis of market opportunities and securities based on an assessment of factors such as income yield, credit risk and bond duration. The Manager's will assess each individual bond and the bond markets to understand the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the bonds under assessment. Following such credit assessment, the Manager appraises a potential investment in a bond in terms of relative value when compared to other bonds that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which bonds to acquire on behalf of the Fund. When an investment in a bond is made, it will be closely monitored by the Manager taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such bond will be kept under review by the Manager. The Manager may invest substantially or fully in government bonds issued by any Member State.

After the Subscription Period and up to the Maturity Date

Following the Subscription Period, the investment objective of the Fund is to achieve long-term capital appreciation.

The Fund seeks to achieve this objective in the following manner:

1. By reducing the Fund's allocation to Initial Strategies on a monthly basis ("Averaging Out").

   For example, it is anticipated that following the last day of the Subscription Period and on a monthly basis the Fund's asset allocation to Initial Strategies will reduce on average by 1.72% of the Fund's assets.

   The Manager, based on their discretion, can alter the above monthly amount by accelerating the reduction to the Initial Strategies according to their view of market conditions. The Manager's view on market conditions will be informed by a proprietary quantitative model designed by the Manager which is described below (the "Quant Model"). Each monthly reduction will be followed by a corresponding investment by the Fund into the Longer Term Strategies (described at point 2 below).This Averaging Out will continue every month up to the Maturity Date.

   The Manager will run the Quant Model in order to analyse market conditions which will inform them as to how much they should accelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies.

   This proprietary Quant Model allows the Manager assess market conditions using quantifiable, definitive and numerical data that can be used for checking portfolio return robustness via historical simulations; i.e. it is analysis on documented and definitive information on the past performance of the relevant market. The Quant Model will be based on technical and market indicators such as the relative strength index which analyses the historical strength or weakness of a stock or market based on closing prices of a recent trading period. The analysis produced by the Quant Model allows the Manager take advantage of favourable market conditions when assessing whether or not to increase the Averaging Out amount above 1.72% a month. Favourable market conditions in this context mean conditions that, once the Manager has run the Quant Model and assessed the resulting data and market indicators arising from the running of the Quant Model, indicate to the Manager that it is favourable for the Manager to accelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies at a favourable price.

   The Averaging Out process will occur every month, following the last day of the Subscription Period, for approximately 58 months up to the Maturity Date. At the Maturity Date, the Fund will be fully invested in the Longer Term Strategies. The gradual exposure of Shareholders to the Longer Term Strategies allows Shareholders obtain a diversified exposure to the market while neutralizing the effect of short-term price fluctuations in the broader market. In addition, the Quant Model allows the Manager the discretion to take advantage of favourable market conditions (described above) in respect of potentially accelerating Shareholders exposure to the Longer Term Strategies.

2. As described above, every month the Fund will complete the Averaging Out process and the exposure to the Initial Strategies will be reduced and an exposure will be obtained to Underlying Funds as described in detail immediately below (the "Longer Term Strategies"). As part of the Longer Term Strategies the Fund:

I. may invest principally in Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world, and which take account of any one or all of the following considerations, environmental, social responsibility and governance ("ESG"), as described below,

ESG considerations concern the selection of securities which provide exposure to organisations which hold the highest standards of sustainability, ethics and/or corporate governance.

The environmental element of ESG may look at how an organisation performs as a steward of the natural environment. The social element of ESG may examine how an organisation manages relationships with its employees, service providers and the community at large. The governance element of ESG may consider how an organisation's leadership, executive pay, audits and internal controls work whilst also understanding how shareholders are given the appropriate voting rights.

As responsible investing is the main focus of the Fund, the Manager will, in addition to the criteria outlined in the section entitled "Selection of Underlying Funds", seek to identify Underlying Funds managed by investment managers which have a commitment to responsible investing and which take account of the ESG criteria as described above. The Manager may do this by analysing if the relevant fund manager of the Underlying Fund is:

- A signatory to the United Nations supported Principles for Responsible Investment organisation or similar body which encourages a responsible approach to investing;
- Incorporating the assessment of ESG factors such as waste and pollution, working conditions and board diversity and structure as a key part of their investment process in identifying and evaluating a potential purchase or disposal of an investment;
- Employing a dedicated ESG analyst or team in respect of the implementation of their ESG strategy; and
- Actively engaging with companies in which they are invested and using their shareholder voting rights to promote ESG standards in these companies.

In the selection of the Underlying Funds the Manager will also assess whether or not the Underlying Fund has a sustainability rating or score provided by a recognised data service provider; and

II. may invest up to 20% of its Net Asset Value in units of Underlying Funds managed with absolute return investment strategies. These strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. These strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements;

III. may invest up to 20% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate.

At any time, the Fund may only have a maximum exposure of 30%, either directly or through Underlying Funds, to non-Investment Grade debt securities.

Selection of Underlying Funds

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which make up the Initial Strategies and the Longer Term Strategies.
The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in instruments that make up the Initial Strategies and Longer Term Strategies, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the

Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Fund also being managed by the Manager.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested "alternative investment funds" ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to

reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the MSCI World Net Total Return Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility. The Fund is not designed for investors who need current income.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.[1]

SFDR Disclosure

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.**

[1] The Fund currently follows a fund of funds investment approach and can invest principally in UCITS or other investment funds that are eligible for investment by a UCITS as set out in the Prospectus and this Supplement. The Manager therefore relies on data provided by the investment managers of the Underlying Fund investments when calculating the minimum percentage proportion of sustainable investment of the Fund and when calculating the percentages required in the section of Annex II dealing with the planned asset allocation of the Fund.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk and the Paris Aligned Benchmark Exclusions (the "**PAB Exclusions**").

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	**Initial Offer Price**	**Initial Offer Period**	**Currency Denomination and Hedged Class**		**Sales Charge**	**Minimum Initial Subscription and Minimum Subsequent Subscription**	**Distribution Type**
Class L Acc	€100	08 March 2021 – 23 March 2021	Euro	No	Up to 2%	€1,000 / €100	Accumulating
Class D Acc	€100	08 March 2021 0 –23 March 2021	Euro	No	No	€500 / €100	Accumulating

*Class D Shares in the Fund shall only be made available for subscription to such entities or persons as the Manager may determine from time to time in its absolute discretion.

During the Initial Offer Period, Shares are available for subscription at the Initial Offer Price, as indicated directly above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to the following management fee of the Net Asset Value of each Class of Shares:

Management Fee (% of NAV) of each Share Class	
During the Subscription Period	Up to 0.20%
After the Subscription Period up to the end of year 1	Up to 1.5%
After the end of year 1 up to the end of year 2	Up to 2.5%
After the end of year 2	Up to 2.5%

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first two years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Sales Charge
Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding, in which case, in order to avoid double charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: FAM SUSTAINABLE TARGET 2026
Legal entity identifier: 254900OE26G61JPN0M76

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective: ___%**	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 51% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective: ___%**	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The environmental and/or social characteristics of this product include:

a. **Minimum investment in funds falling within the meaning of Article 8 and 9 of the SFDR**

The Fund will invest a minimum of 90% in underlying funds classified as falling within the meaning of either Article 8 and/or Article 9 under SFDR, which means, that at a minimum, the majority of the underlying funds which the Fund holds promote

environmental and social characteristics while investing in companies which follow good governance practices.

b. Positive Screening

Consideration of environmental, social and governance ("ESG factors") are a key element of portfolio construction/fund selection. Portfolio managers will take a holistic approach which includes the analysis of ESG factors as part of their overall risk adjusted valuation assessment. This supports the overall promotion of investment in funds which the Manager deems desirable on ESG grounds. By incorporating positive ESG factors as part of the overall portfolio construction/fund selection, the Fund through its investments supports a tilt towards investment in underlying funds that have a more positive impact on the environment or society at large.

c. Fund Level ESG Scoring

A monthly independent analysis and classification of the Fund's ESG score is performed internally by the Manager. A minimum ESG scoring threshold is applied at Fund level to ensure that the Fund's ESG score does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control serves to highlight a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers on ESG topics.

d. Negative Screening (Norm-based exclusions)

For any potential direct holdings the Manager applies its basic exclusions (the "**Basic Exclusions**") as well as the PAB Exclusions in accordance with its Exclusion Policy. The Manager wants its funds under management to avoid making any investments which the Manager or its clients might deem incompatible with minimum responsible investing principles. To align the Fund's investments with this sustainable investment approach, Manager have adopted a firm wide exclusion policy which screens all investments for their compliance with minimum international standards and norms, from which an Exclusion List is derived..

Those exclusions currently include:

a. Issuers that breach the principles of the United Nations Global Compact;
b. Issuers involved in the manufacture or product life cycle of controversial weapons including biological and chemical weapons, cluster munitions and sub-munitions, depleted uranium, landmines including antipersonnel mine and nuclear weapons);
c. Issuers involved in the cultivation and production of tobacco
d. Issuers that derive 1% or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;
e. Issuers that derive 10% or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;
f. Issuers that derive 50% or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;
g. Issuers that derive 50% or more of their revenues from electricity generation with a GHF intensity of more than 100g C02 e/kWh
h. Issuers that contravene the United Nations Global Company labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards

The Manager also assesses whether or not the Underlying Fund manager applies any

basic exclusion policy and the PAB Exclusions.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted.

- ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Fund uses the following indicator;

i. The percentage of the Fund portfolio made in sustainable investments;

ii. the percentage of the Fund's underlying fund holdings rated A by MSCI ESG Manager (or an other corresponding rating from a similar rating provider).

- ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments that the Fund intends to make is to promote environmental and/or social characteristics. On the basis that the Fund is currently following a fund of funds investment approach, the objectives of the sustainable investments that the Fund partially intends to make is linked to the sustainable investments made by the underlying funds. The Fund will seek to make investments in underlying funds that commit/partially commit to invest in sustainable investments and who have a process for ensuring that their sustainable investments are:

a. Made in investee companies that demonstrate good governance;

b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

c. Made in investee companies that make a positive contribution towards an environmental or social objective. The Fund may allocate between underlying funds which make sustainable investments of any type, i.e. investments with an environmental, and/or a social objective. The Fund is not required to favour any specific type of sustainable investment.

- ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective based on the policies adopted by the relevant underlying fund investment managers. These policies are considered as part of the Manager's initial and ongoing investment due diligence procedures and are assessed for alignment with the indicators set out in Table 1 and any relevant additional indicator from Tables 2 and 3 of Annex I of the Delegated Regulation and the approach taken by the Manager.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Principal adverse impact ("PAI") indicators are calculated at both the Fund level and the underlying fund level. The results will be compared with that of a chosen proxy benchmark representative of the Fund's investment universe and/or peers. These calculations will be used as the basis of assessment of adverse impacts on sustainability factors in order to determine whether the Manager can improve at Fund level and/or where Manager can engage with underlying fund investment managers to improve at the underlying fund level. For example, Manager may engage on disclosure if a certain metric is materially misaligned with that of the chosen proxy and/or peers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments which the Fund makes in the underlying funds and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are assessed in the following ways;

1. Via PAI monitoring of the following indicators;

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

2. Through engagement with the underlying fund investment managers to ensure that the sustainable investments that the underlying funds makes are:

    a. Made in investee companies that demonstrate good governance:

    b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

    c. Made in investee companies that make a positive contribution towards an environmental or social objective.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

☒ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the Fund portfolio against mandatory and additional PAI indicators. Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report. The PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

☐ No

What investment strategy does this financial product follow?

The Fund is structured as a Fund giving a return to investors at the Maturity Date. The Fund is organised in a manner that it has two separate investment objectives for different time periods in the Fund's life, as set out below. Please refer to the supplement to the Prospectus titled "FAM Sustainable Target 2026" (the "Supplement") for definitions of "Maturity Date" and "Subscription Period".

1. During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund. The Manager will seek to achieve this objective by investing principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

2. Following the Subscription Period the investment objective of the Fund is to achieve medium to long-term capital appreciation. The Fund seeks to achieve this objective in the following manner:

- By reducing the Fund's allocation to Initial Strategies on a monthly basis ("Averaging Out").

- Every month the Fund will complete the Averaging Out process and the exposure to the Initial Strategies will be reduced and an exposure will be obtained to Underlying Funds as described in detail in the Supplement (the "Longer Term Strategies").

As part of the Longer Term Strategies, the Fund may invest up to 100% of the Fund's assets in underlying funds that provide exposure to equities issued by companies incorporated anywhere in the world, and which take account of a number of ESG factors.

Although the Fund does not have a specific sustainable investment objective, the Fund will pursue an investment strategy that seeks to identify the best investment opportunities by integrating financial analysis with environmental, social responsibility and governance considerations. In order to meet such extra-financial characteristics, the target funds or the assets held directly by the Fund are assessed as related to sustainable and social criteria and where applicable, they must have an explicit commitment to responsible investing as per their investment process.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The ESG rating of each instrument held by the Fund should be reflected in an assessment, and ultimately in the decision on whether to invest in such instrument. The Fund will invest, directly or indirectly through open-ended UCIs and UCITS, in instruments that have better social or environmental ratings and/or are issued by issuers with better social or environmental practices. For example as stated above, the Fund currently intends to invest a minimum of 90% in other funds classified as either Article 8 and/or Article 9 under SFDR, which means, that at a minimum, the majority of the underlying funds which the Fund holds promote environmental and social characterisictics while investing in companies which follow good governance practices.

The Manager also maintains due diligence processes to assess the ESG commitments of underlying investments and underlying fund managers. To this end, the Manager, reviews and assesses on a periodic basis private and public information related to each issuer and/or relevant underlying fund manager, as applicable, and its ESG rating or characteristics. In addition to such assessment, the Manager will obtain from each issuer (and/or the relevant underlying fund manager, as the case may be), which has been selected for investment by the Fund, any information necessary to assess the ESG rating or characteristics of the relevant underlying investment.

For any direct investment (i.e. non-underying fund investments), companies that are in breach of UN Global Compact principles (along with certain other Exclusion criteris) are excluded from the investment universe of the Fund as defined by the Manager. Where an investment is deemed inappropriate, no further investment may be made in the instrument, however existing holdings may be retained for a period of time to facilitate orderly divestment. For investment in underlying funds, exclusions of the underying fund manager are assessed as part of the initial and ongoing due diligence process.

For any direct investment (i.e. non-underying fund investments), the Manager recognises and adheres to the principle of responsible stewardship via sustainable proxy voting and collective enagement initiatives as a way of promoting good ESG policies.

The elements of the investment strategy to attain of the environmental or social characteristics promoted by this financial product as described above are systematically integrated throughout the investment process

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

  a. **Minimum investment in funds falling within the meaning of Article 8 and Article 9 of the SFDR**
  The Fund will invest a minimum of 90% in other funds classified as falling within the meaning of either Article 8 and/or Article 9 under the SFDR.

  b. **Minimum underlying fund score**
  80% of the Fund's underlying fund holdings will be rated A by MSCI ESG Manager (or an other corresponding rating from a similar rating provider). If the Sustainable Finance Committee of the Manager determines that the underlying fund in question has mitigating reasons for its MSCI ESG score to have fallen below A, the underlying fund holding may be maintained within the Fund portfolio.

  c. **Exclusion Policy**
  For any direct holdings (i.e. non-underying fund investments), the Manager's Exclusion Policy applies, and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

  Not applicable

- ***What is the policy to assess good governance practices of the investee companies?***

  Good governance is assessed for underlying funds through engagement with the underlying fund manager via due diligence.

  In addition, ensuring that a minimum of 90% of the portfolio is invested in funds falling within the meaning of Article 8 or Article 9 of the SFDR, demonstrates that the Manager is limiting the Fund's investment universe of underlying funds to focus on those investment funds that must only invest in investee companies that demonstrate good governance practices (in compliance with SFDR).

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

In addition, direct holdings (i.e. non-underlying fund investments) in the Fund must have a minimum rating of BB according to MSCI ESG Manager (or an other corresponding rating from a similar rating provider). This ensures a level of good governance vis a vis the above scores. Limited exceptions to this rule may apply.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments means the products Net Asset Value which is the total market value of the product.

At least 90% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund. The Financial product also comments to a minimum proportion of 51% in sustainable investments. The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

The asset allocation may change over time and percentages may be updated in this appendix from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate underlying fund manager data and/or company or third-party data.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

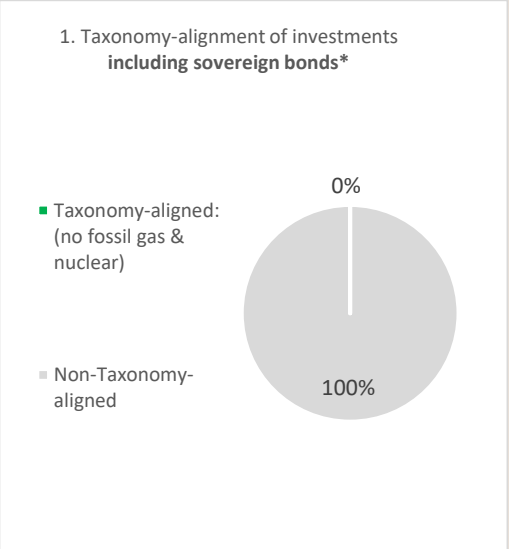
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities are** activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the best performance.

***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**

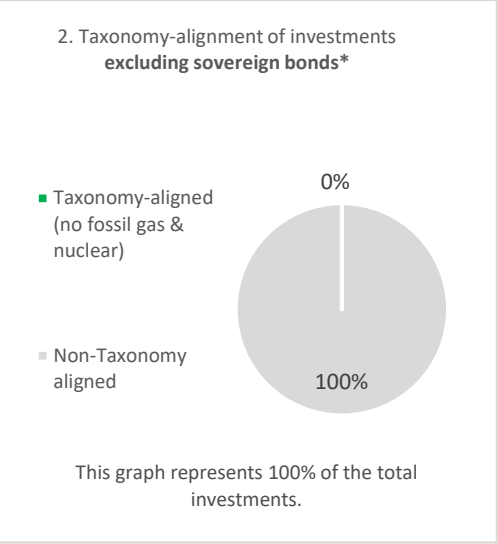
Derivatives are not used to attain the environmental or social characteristics promoted by this Fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy1?



Yes:

In fossil gas In nuclear energy

No: X

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What is the minimum share of investments in transitional and enabling activities?

0%. There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What is the minimum share of sustainable investments with an

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

environmental objective that are not aligned with the EU Taxonomy?

51%*.

What is the minimum share of socially sustainable investments?

51%*.

*The Fund commits to invest at least 51% of its assets in sustainable investments. Within this overall commitment, there is no prioritisation of environmental and/or social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the Manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the Managers Exclusion Policy.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Responsible Investment Policy, summary investment process and Exclusion Policy can be found on the Manager's website at the following link: FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)

FAM EMERGING MARKETS TARGET I

SUPPLEMENT DATED 30 JUNE 2025

This Supplement contains specific information in relation to **FAM Emerging Markets** Target I (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus of FAM Evolution ICAV dated 01 December 2022 and each addendum thereto (together the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. An investment in the Fund involves certain investment risks, including the possible loss of principal. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Subscription Period

The original Subscription Period closed in 2021 (the **Original Subscription Period**). The subsequent Subscription Period means the 60 calendar days from 1 July 2025 to 1 September 2025 or such longer or shorter period, as may be determined by the Directors and on a quarterly basis thereafter at the discretion of the Directors and once notified in advance to Shareholders. Shares will be available for subscription during this time, at the prevailing Net Asset Value (NAV) per Share.

Investment Objective and Policies

The investment objective of the Fund is to achieve long-term capital appreciation.

The Fund:

(1) may invest up to 100% of its assets in units of Underlying Funds that provide exposure to equities and equity-linked instruments (i.e. American depositary receipts and global depositary receipts) issued by issuers in emerging markets. Emerging markets refer to countries that are considered by the Manager to be countries that are characterised as emerging by the World Bank, the United Nations, the International Finance Corporation, the European Bank for Reconstruction and Development, or are included in an emerging markets index by a recognised index provider. Whilst the Fund may invest in Underlying Funds made up of investments that have an exposure to China and India; the Fund will not itself invest in those jurisdictions. Up to 10% of the assets of the Fund may be invested in equities issued by companies incorporated anywhere in the world or in Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world. The Fund's exposure to Russia via investment in the Underlying Funds shall be limited to 20% of the assets of the Fund. The Fund will not directly invest in securities listed or traded in Russia.;

(2) may invest up to 20% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies

may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets), hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and

(3) may invest up to 20% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

At any time, the Fund may only have a maximum exposure of 30%, either directly or through Underlying Funds, to non-Investment Grade debt securities.

Selection of Underlying Funds

.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers, as follows:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Fund also being managed by the Manager.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in alternative investment funds ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii)

risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies,(ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices,(iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the

duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price

trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the MSCI Emerging Markets Daily Net Total Return (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility. The Fund is not designed for investors who need current income.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	Closed	Euro	No	Up to 2%	€1,000 / €100	Accumulating
Class D Acc	€100	Closed	Euro	No	No	€500 / €100	Accumulating

*Class D Shares in the Fund shall only be made available for subscription to such entities or persons as the Manager may determine from time to time in its absolute discretion.

During the Initial Offer Period, Shares are available for subscription at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to the following management fee of the Net Asset Value of each Class of Shares.

Management Fee (% of NAV) for each Share Class	
During the Original Subscription Period	Up to 0.20%
After the Original Subscription Period up to the end of year 1	Up to 1.50%
After the end of year 1 up to the end of year 2	Up to 1.50%
After the end of year 2	Up to 1.50%

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding, in which case, in order to avoid double charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000, will be borne by the Fund and amortised over the first two years of the Fund's operation (or such other period as may be determined by the Directors at their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

FAM MEGATRENDS TARGET IX

SUPPLEMENT DATED 30 JUNE 2025

This Supplement contains specific information in relation to **FAM MegaTrends Target IX** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset- management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 1 December 2022 and each addendum thereto (together the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. An investment in the Fund involves certain investment risks, including the possible loss of principal. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Subscription Period	The original Subscription Period closed in 2021 (the **Original Subscription Period**). The subsequent Subscription Period means the 60 calendar days from 1 July 2025 to 1 September 2025 or such longer or shorter period, as may be determined by the Directors and on a quarterly basis thereafter at the discretion of the Directors and once notified in advance to Shareholders. Shares will be available for subscription during this time, at the prevailing Net Asset Value (NAV) per Share.

Investment Objective and Policies

The investment objective of the Fund is to achieve long-term capital appreciation.

The Fund:

I. may invest principally in Underlying Funds that provide exposure to equities issued by companies operating in sectors and geographical regions that benefit from ongoing global megatrends.

Global megatrends ("Megatrends") are generally defined as global forces of development that create fundamental shifts in the progress of society thus impacting business, the economy, culture and the way we live. Examples of Megatrends that are currently reshaping our world are: demographic and social changes, climate change and resource scarcity, technological breakthroughs and rapid urbanization. Megatrends evolve independently of the economic cycle and, thus, possess the capacity to continuously redraw the financial landscape. By underpinning these Megatrends, it is possible to identify investment sub-themes which act as both drivers and beneficiaries of these Megatrends.

A summary of some of the sub-themes of the abovementioned Megatrends prevalent in the world today are listed below. Potential Shareholders should be aware that the below listed headings are examples of certain sub-themes of Megatrends and are for illustrative

purposes only. It is important for potential Shareholders to note that what constitutes a Megatrend sub-theme today may not be classed as such in the future. This is not intended to be an exhaustive list and these sub-themes have the ability to change over time. Therefore, the Fund does not commit to definitively invest in each or all of these Megatrend sub-themes at any time:

- Ageing Population: The ageing of the world's population is widely considered one of the most enduring demographic shifts in human history. Companies which have a focus on improving developments in healthcare, developments in Biotechnology and shifting consumer trends leading to a longer life expectancy are in a position to benefit greatly from this trend;
- Oncology: With cancer diagnoses expected to increase in the next 20 years, companies which are committing capital to cancer research to develop better diagnostics to cure cancer are in a position to benefit from developments in the treatment of cancer;
- Water: Population growth, urbanization and water-intensive dietary changes are adding to rising industrial water demand. Companies at the forefront of new technologies required to accommodate increasing global demand for water are well placed to benefit from this trend;
- Electric & Autonomous Vehicles: With a shift away from internal combustion engine vehicles and movement toward the broad usage of autonomous vehicles, manufacturers of both electric and autonomous vehicles as well as their components and other companies in the supply chain all stand to be beneficiaries from this trend; and
- Drones: Extensive growth in consumer and commercial drone usage means that companies involved in the production of these technologies will benefit from this evolving trend.

II. may invest up to 20% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate;

III. may invest up to 20% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and

At any time, the Fund may only have a maximum exposure of 30%, either directly or through Underlying Funds, to non-Investment Grade debt securities.

Selection of Underlying Funds

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential

investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds being managed by the Manager.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on the Recognised Markets.

Underlying Funds
The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in alternative investment funds ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, theUnited States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest in companies that follow good governance practices, as further described in Annex II at the end of this Supplement .[1]

SFDR Disclosures

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion

policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of the SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping

out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set

down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the MSCI World Net Total Return Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility. The Fund is not designed for investors who need current income.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	Closed	Euro	No	Up to 2%	€1,000 / €100	Accumulating
Class D Acc	€100	Closed	Euro	No	No	€500 / €100	Accumulating

*Class D Shares in the Fund shall only be made available for subscription to such entities or persons as the Manager may determine from time to time in its absolute discretion.

During the Initial Offer Period, Shares are available for subscription at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

The Manager shall be entitled to the following management fee of the Net Asset Value of each Class of Shares:

Management Fee (% of NAV) for each Share Class	
During the Original Subscription Period	Up to 0.20%
After the Original Subscription Period up to the end of year 1	Up to 1.50%
After the end of year 1 up to the end of year 2	Up to 2.50%
After the end of year 2	Up to 2.50%

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding, in which case, in order to avoid double charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first two years of the Fund's operation (or such other period as may be determined by the Directors at their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, investors should take the following risk factors into account: "General Risks", "Investment Risk", "Liquidity Risk", "Redemption Risk", "Credit Risk", "Currency Risk", "Share Currency Designation Risk", "Risks Affect Specific Issuers", "Derivatives Risk", "Investing in Fixed Income Securities", "Below Investment Grade Credit Risk", "Changes in Interest Rates", "Investment in Exchange Traded Funds (ETFs)" and "Additional Risks Applicable to Underlying Funds". Nevertheless, such list is not deemed to be exhaustive and therefore investors are recommended to familiarise themselves with all risk factors described in the above-mentioned section of the Prospectus.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FAM MEGATRENDS TARGET IX
Legal entity identifier: 254900AO8WP2AOGZT981

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective: ___%**	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective: ___%**	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The environmental and/or social characteristics of this product include:

a. **Minimum investment in funds in scope of Article 8 and 9 of the SFDR**
The Fund will invest a minimum of 90% in Underlying Funds which fall within the meaning of either Article 8 or Article 9 of the SFDR, which means, that at a minimum, the majority of the Underlying Funds which the Fund holds promote environmental and social characteristics while investing in companies which follow good governance practices.

b. Positive Screening

Consideration of ESG factors are a key element of portfolio construction/fund selection. Portfolio managers will take a holistic approach which includes the analysis of ESG factors as part of their overall risk adjusted valuation assessment. This supports the overall promotion of investment in funds which the Manager deems desirable on ESG grounds. By incorporating positive ESG factors as part of the overall portfolio construction/fund selection, the Fund through its investments supports a tilt towards investment in Underlying Funds that have a more positive impact on the environment or society at large.

c. Fund Level ESG Scoring

A monthly independent analysis and classification of the Fund's ESG score is performed internally by the Manager. A minimum ESG scoring threshold is applied at Fund Level to ensure that the Fund's ESG score does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control serves to highlight a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers on ESG topics.

d. Negative Screening (Norm-based exclusions)

For any potential direct holdings the Manager applies norms-based exclusions based on its Exclusion Policy. The Manager wants its funds under management to avoid making any investments which the Manager or its clients might deem incompatible with minimum responsible investing principles. To align the Fund's investments with this sustainable investment approach, Manager have adopted a firm wide exclusion policy which screens all investments for their compliance with minimum international standards and norms, from which an Exclusion List is derived..

Exclusion categories considered in the Exclusion Policy are:

- United Nations Global Compact Principles
- Controversial Weapons
- Tobacco
- Climate Change
- Forced Labour

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Fund uses the following indicator;

i. The percentage of the Fund portfolio made in sustainable investments;

ii. the percentage of the Fund's Underlying Fund holdings rated A or above by MSCI ESG Manager (or another corresponding rating from a similar rating provider).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments that the Fund intends to make is to promote environmental and/or social characteristics. On the basis that the Fund is currently following

a fund of funds investment approach, the objectives of the sustainable investments that the Fund partially intends to make is linked to the sustainable investments made by the Underlying Funds. The Fund will seek to make investments in Underlying Funds that commit/partially commit to invest in sustainable investments and who have a process for ensuring that their sustainable investments are:

a. Made in investee companies that demonstrate good governance;

b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

c. Made in investee companies that make a positive contribution towards an environmental or social objective. The Fund may allocate between Underlying Funds which make sustainable investments of any type, i.e. investments with an environmental, and/or a social objective. The Fund is not required to favour any specific type of sustainable investment.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective based on the policies adopted by the relevant Underlying Fund investment managers. These policies are considered as part of the Manager's initial and ongoing investment due diligence procedures and are assessed for alignment with the indicators set out in Table 1 and any relevant additional indicator from Tables 2 and 3 of Annex I of the Delegated Regulation.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Principal adverse impact ("PAI") indicators are calculated at both the Fund level and the Underlying Fund level. The results will be compared with that of a chosen proxy benchmark representative of the Fund's investment universe and/or peers. These calculations will be used as the basis of assessment of adverse impacts on sustainability factors in order to determine whether the Manager can improve at Fund level and/or where Manager can engage with Underlying Fund investment managers to improve at the Underlying Fund level. For example, Manager may engage on disclosure if a certain metric is materially misaligned with that of the chosen proxy and/or peers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments which the Fund makes in the Underlying Funds and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are assessed in the following ways;

1. Via PAI monitoring of the following indicators;

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

2. Through engagement with the Underlying Fund investment managers to ensure that the sustainable investments that the Underlying Funds makes are:

a. Made in investee companies that demonstrate good governance:

b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

c. Made in investee companies that make a positive contribution towards an environmental or social objective.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

✖ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the Fund portfolio against mandatory and additional PAI indicators. Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report. The PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

☐ No

What investment strategy does this financial product follow?

The

the investment objective of the Fund is to achieve long-term capital appreciation. The Fund may invest principally in Underlying Funds that provide exposure to equities issued by companies operating in sectors and geographical regions that benefit from ongoing global megatrends, as further described in the Supplement.

Although the Fund does not have a specific sustainable investment objective, the Manager has fully integrated the ESG Policy into the overall investment process, in particular, the portfolio construction process.

As part of the process to undertake appropriate due diligence on investments, the Manager will generally conduct a level of research on each Underlying Fund which will give the Investment Manager an understanding of the investments underpinning same. This includes a quantitative and qualitative assessment as detailed in the "Investment Objective and Policies" section of the Supplement which involves scrutiny relating to each

Underlying Fund's approach to ESG factors and consideration of Sustainability Risks.

The Manager integrates these ESG factors and this Sustainability Risk assessment into its investment research process and its risk management process – both initially and on an ongoing basis for the duration of the period the Fund holds an investment or pursues a particular investment strategy.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

For investment in Underlying Funds, exclusions of the Underying Fund manager are assessed as part of the initial and ongoing due diligence process.

For any direct investment (i.e. non-underying fund investments), companies that are in breach of UN Global Compact principles (along with certain other Exclusion criteris) are excluded from the investment universe of the Fund as defined by the Manager. Where an investment is deemed inappropriate, no further investment may be made in the instrument, however existing holdings may be retained for a period of time to facilitate orderly divestment. For investment in underlying funds, exclusions of the underying fund manager are assessed as part of the initial and ongoing due diligence process.

For any direct investment (i.e. non-underying fund investments), the Manager recognises and adheres to the principle of responsible stewardship via sustainable proxy voting and collective enagement initiatives as a way of promoting good ESG policies.

The elements of the investment strategy to attain of the environmental or social characteristics promoted by this financial product as described above are systematically integrated throughout the investment process

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

a. Minimum investment in funds in scope of Article 8 and Article 9 SFDR

The Fund will invest a minimum of 90% in other funds which fall within the meaning of either Article 8 and/or Article 9 of the SFDR.

b. Minimum Underlying Fund score

80% of the Fund's Underlying Fund holdings will be rated A by MSCI ESG Manager (or an other corresponding rating from a similar rating provider). If the Sustainable Finance Committee of the Manager determines that the Underlying Fund in question has mitigating reasons for its MSCI ESG score to have fallen below A, the Underlying Fund holding may be maintained within the Fund portfolio.

c. Exclusion Policy

For any direct holdings (i.e. non-underying fund investments), the Manager's Exclusion Policy applies, and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

Not applicable

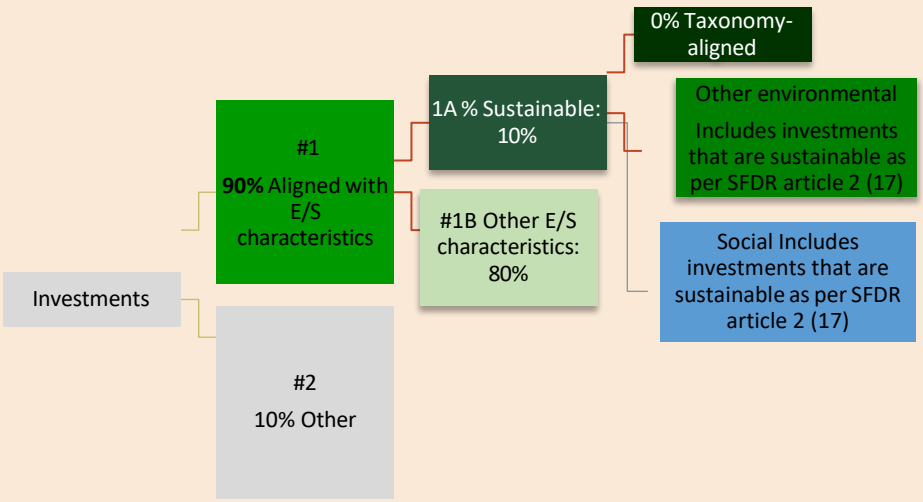
- ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Good governance is assessed for Underlying Funds through engagement with the Underlying Fund manager via due diligence.

In addition, ensuring that a minimum of 90% of the portfolio is invested in funds which fall within the meaning of Article 8 or 9 of the SFDR, demonstrates that the Manager is limiting the Fund's investment universe of Underlying Funds to focus on those investment funds that must only invest in investee companies that demonstrate good governance practices (in compliance with SFDR).

What is the asset allocation planned for this financial product?



Asset allocation describes the share of investments in

Taxonomy-aligned activities are expressed as a

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU

by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments means the Fund's Net Asset Value which is the total market value of the product.

At least 80% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund. The Financial product also comments to a minimum proportion of 10% in sustainable investments. The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

The asset allocation may change over time and percentages may be updated in this appendix from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate underlying fund manager data and/or company or third-party data.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Derivatives are not used to attain the environmental or social characteristics promoted by this Fund.

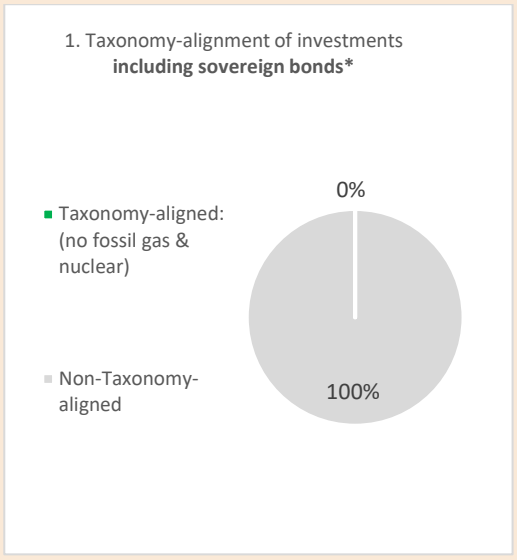
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy

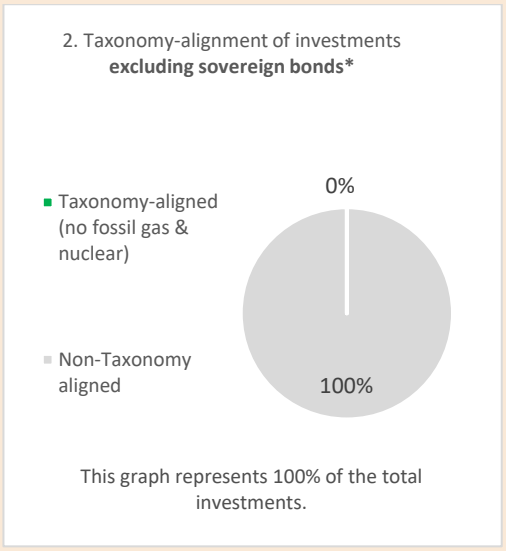
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities are** activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the best performance.

Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[1]?



Yes:

In fossil gas In nuclear energy

No: X

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

What is the minimum share of investments in transitional and enabling activities? 0%.

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

10%*.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

10%*

*The Fund commits to invest at least 10% of its assets in sustainable investments. Within this overall commitment, there is no prioritisation of environmental and/or social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the Manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the managers exclusion policy.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Fund, including the Responsible Investment Policy and Exclusion Policy can be found on the Manager's website at the following link FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)

FAM MEGATRENDS TARGET 2026 III

SUPPLEMENT DATED 7th July 2023

This Supplement contains specific information in relation to **FAM MegaTrends Target 2026 III** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. An investment in the Fund involves certain investment risks, including the possible loss of principal. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Maturity Date	2 June 2026
Subscription Period	means the 60 calendar days following the end of the Initial Offer Period or such longer or shorter period, as may be determined by the Directors in accordance with the requirements of the Central Bank.

Investment Objective and Policies

The Fund is being structured as a Fund giving a return to investors at the Maturity Date. The Fund is organised in a manner that it has two separate investment objectives for different time periods in the Fund's life as follows, and as explained in detail in each sub-section below:

1. **During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund; and**

2. **Following the Subscription Period, the investment objective of the Fund is to achieve long-term capital appreciation**.

As stated above, the main investment objective of the Fund is as set out in (2) above and in the section headed "After the Subscription Period and up to the Maturity Date". The reason for having a Subscription Period is to have a short 60 day time period during which the Fund will accept subscriptions and invest them in a manner designed to seek to achieve a positive investment return whilst maintaining liquidity for the Fund. After the Subscription Period, subscriptions into the Fund are no longer accepted. Although the Fund will be closed for subscriptions after the Subscription Period, requests for redemptions received prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day (i.e. each Business Day) in accordance with the section of the Prospectus entitled **"**Redemption of Shares".

During the Subscription Period

During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund. The Manager will seek to achieve this objective by investing principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

Investment in the Initial Strategies will be selected on the basis that will result in the Fund having a weighted average interest rate duration of no longer than 4.5 years.

Selection of debt instruments
The debt instruments that may be part of the Initial Strategies will selected based on the Manager's top-down analysis, which includes a view on the global investment outlook and analysis of market opportunities and securities based on an assessment of factors such as income yield, credit risk and bond duration. The Manager's will assess each individual bond and the bond markets to understand the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the bonds under assessment. Following such credit assessment, the Manager appraises a potential investment in a bond in terms of relative value when compared to other bonds that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which bonds to acquire on behalf of the Fund. When an investment in a bond is made, it will be closely monitored by the Manager taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such bond will be kept under review by the Manager. The Manager may invest substantially or fully in government bonds issued by any Member State.

After the Subscription Period and up to the Maturity Date
Following the Subscription Period, the investment objective of the Fund is to achieve long-term capital appreciation.

The Fund seeks to achieve this objective in the following manner:

1. By reducing the Fund's allocation to Initial Strategies on a monthly basis ("Averaging Out").

   For example, it is anticipated that following the last day of the Subscription Period and on a monthly basis, the Fund's asset allocation to Initial Strategies will reduce on average by 1.72% of the Fund's assets.

   The Manager, based on their discretion, can alter the above monthly amount by accelerating the reduction to the Initial Strategies according to their view of market conditions. The Manager's view on market conditions will be informed by a proprietary quantitative model designed by the Manager which is described below (the "Quant Model"). Each monthly reduction will be followed by a corresponding investment by the Fund in the Longer Term Strategies (described at point 2 below). This Averaging Out will continue every month up to the Maturity Date.

   The Manager will run the Quant Model in order to analyse market conditions which will inform them as to how much they should accelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies.

   This proprietary Quant Model allows the Manager to assess market conditions using quantifiable, definitive and numerical data that can be used for checking portfolio return robustness via historical simulations; i.e. it is analysis on documented and definitive information on the past performance of the relevant market. The Quant Model will be based on technical and market indicators such as the relative strength index which analyses the historical strength or weakness of a stock or market based on closing prices of a recent trading period. The analysis produced by the Quant Model allows the Manager to take advantage of favourable market conditions when assessing whether or not to increase the Averaging Out amount above 1.72% a month. Favourable market conditions in this context mean conditions that, once the Manager has run the Quant Model and assessed the resulting data and market indicators arising from the running of the Quant Model, indicate to the Manager that it is favourable for the Manager to accelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies at a favourable price.

   The Averaging Out process will occur every month, following the last day of the Subscription Period, for approximately 58 months up to the Maturity Date. At the Maturity Date the Fund will be fully invested in the Longer Term Strategies. The gradual exposure of Shareholders to the Longer Term Strategies allows Shareholders to obtain a diversified exposure to the market while neutralizing the effect of short-term price fluctuations in the broader market. In addition, the Quant Model gives Manager the discretion to take advantage of favourable market conditions (described above) in respect of potentially accelerating Shareholders exposure to the Longer Term Strategies.

2. As described above, every month the Fund will complete the Averaging Out process and the exposure to the Initial Strategies will be reduced and an exposure will be obtained to Underlying Funds as

described in detail immediately below (the "Longer Term Strategies"). As part of the Longer Term Strategies the Fund:

I. may invest principally in Underlying Funds that have a primary focus on providing exposure to equities issued by companies operating in sectors and geographical regions that benefit from ongoing global megatrends.

Global megatrends ("Megatrends") are generally defined as global forces of development that create fundamental shifts in the progress of society thus impacting business, the economy, culture and the way we live. Examples of Megatrends that are reshaping our world currently are demographic and social changes, climate change and resource scarcity, technological breakthroughs and rapid urbanization. Megatrends evolve independently of the economic cycle and thus possess the capacity to continuously redraw the financial landscape. Underpinning these Megatrends, it is possible to identify investment sub-themes which act as both drivers and beneficiaries of these Megatrends.

A summary of some of the sub-themes of the abovementioned Megatrends prevalent in the world today are listed below. Potential Shareholders should be aware that the below headings listed 1-5 are examples of certain sub-themes of Megatrends and are for illustrative purposes only. It is important for potential Shareholders to note that what constitutes a Megatrend sub-theme today may not be classed as such in the future. This is not intended to be an exhaustive list and these sub-themes have the ability to change over time. Therefore, the Fund does not commit to definitively invest in each or all of these Megatrend sub-themes at any time:

- Ageing Population: The ageing of the world's population is widely considered one of the most enduring demographic shifts in human history. Companies which have a focus on improving developments in healthcare, developments in BioTechnology and shifting consumer trends leading to a longer life expectancy are in a position to benefit greatly from this trend;
- Oncology: With cancer diagnoses expected to increase in the next 20 years, companies which are committing capital to cancer research to develop better diagnostics to cure cancer are in a position to benefit from developments in the treatment of cancer;
- Water: Population growth, urbanization and water-intensive dietary changes are adding to rising industrial water demand. Companies at the forefront of new technologies required to accommodate increasing global demand for water are well placed to benefit from this trend;
- Electric & Autonomous Vehicles: With a shift away from internal combustion engine vehicles and movement toward the broad usage of autonomous vehicles, manufacturers of both electric and autonomous vehicles as well as their components and other companies in the supply chain all stand to be beneficiaries from this trend; and
- Drones: Extensive growth in consumer and commercial drone usage means that companies involved in the production of these technologies will benefit from this evolving trend.

II. may invest up to 20% of its Net Asset Value in units of Underlying Funds managed with absolute return investment strategies. These strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. These strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements; and

III. may invest up to 20% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate.

At any time, the Fund may only have a maximum exposure of 30%, either directly or through Underlying Funds, to non-Investment Grade debt securities.

Selection of Underlying Funds

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which make up the Initial Strategies and the Longer Term Strategies.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in instruments that make up the Initial Strategies and Longer Term Strategies, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade- off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers, as follows:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and
- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Fund also being managed by the Manager.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested "alternative investment funds" ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.[1]

SFDR Disclosures

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of the SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices)

and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and

can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge

the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the MSCI World Net Total Return Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility. The Fund is not designed for investors who need current income.

Base Currency: Euro

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	20 May 2021 – 3 June 2021	Euro	No	Up to 2%	€1,000 / €100	Accumulating
Class D Acc	€100	20 May 2021 – 3 June 2021	Euro	No	No	€500 / €100	Accumulating

*Class D Shares in the Fund shall only be made available for subscription to such entities or persons as the Manager may determine from time to time in its absolute discretion.

During the Initial Offer Period, Shares are available for subscription at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to the following management fee of the Net Asset Value of each Class of Shares.

Management Fee (% of NAV) for each Share Class	
During the Subscription Period	Up to 0.20%
After the Subscription Period up to the end of year 1	Up to 1%
After the end of year 1 up to the end of year 2	Up to 1.4%
After the end of year 2 up to the end of year 3	Up to 1.75%
After the end of year 3 up to the end of year 4	Up to 2.10%
After the end of year 4	Up to 2.55%

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding, in which case, in order to avoid double charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors at their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, investors should take the following risk factors into account: "General Risks", "Investment Risk", "Liquidity Risk", "Redemption Risk", "Credit Risk", "Currency Risk", "Share Currency Designation Risk", "Risks Affect Specific Issuers", "Derivatives Risk", "Investing in Fixed Income Securities", "Below Investment Grade Credit Risk", "Changes in Interest Rates", "Investment in Exchange Traded Funds (ETFs)" and "Additional Risks Applicable to Underlying Funds". Nevertheless, such list is not deemed to be exhaustive and therefore investors are recommended to familiarise themselves with all risk factors described in the above-mentioned section of the Prospectus.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: FAM MegaTrends Target 2026 III
Legal entity identifier: 254900X8KABA2IRJ0O03

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective: ___%**	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 5% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective: ___%**	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The environmental and/or social characteristics of this product include:

a. Minimum investment in funds in scope of Article 8 and 9 of the SFDR

The Fund will invest a minimum of 90% in Underlying Funds which fall within the meaning of either Article 8 or Article 9 of the SFDR, which means, that at a minimum, the majority of the Underlying Funds which the Fund holds promote environmental and social characteristics while investing in companies which follow good governance practices.

b. Positive Screening

Consideration of ESG factors are a key element of portfolio construction/fund selection. Portfolio managers will take a holistic approach which includes the analysis of ESG factors as part of their overall risk adjusted valuation assessment. This supports the overall promotion of investment in funds which the Manager deems desirable on ESG grounds. By incorporating positive ESG factors as part of the overall portfolio construction/fund selection, the Fund through its investments supports a tilt towards investment in Underlying Funds that have a more positive impact on the environment or society at large.

c. Fund Level ESG Scoring

A monthly independent analysis and classification of the Fund's ESG score is performed internally by the Manager. A minimum ESG scoring threshold is applied at Fund Level to ensure that the Fund's ESG score does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control serves to highlight a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers on ESG topics.

d. Negative Screening (Norm-based exclusions)

For any potential direct holdings the Manager applies norms-based exclusions based on its Exclusion Policy. The Manager wants its funds under management to avoid making any investments which the Manager or its clients might deem incompatible with minimum responsible investing principles. To align the Fund's investments with this sustainable investment approach, Manager have adopted a firm wide exclusion policy which screens all investments for their compliance with minimum international standards and norms, from which an Exclusion List is derived..

Exclusion categories considered in the Exclusion Policy are:

- United Nations Global Compact Principles
- Controversial Weapons
- Tobacco
- Climate Change
- Forced Labour

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Fund uses the following indicator;

i. The percentage of the Fund portfolio made in sustainable investments;

ii. the percentage of the Fund's Underlying Fund holdings rated A or above by MSCI ESG Manager (or another corresponding rating from a similar rating provider).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments that the Fund intends to make is to promote environmental and/or social characteristics. On the basis that the Fund is currently following

a fund of funds investment approach, the objectives of the sustainable investments that the Fund partially intends to make is linked to the sustainable investments made by the Underlying Funds. The Fund will seek to make investments in Underlying Funds that commit/partially commit to invest in sustainable investments and who have a process for ensuring that their sustainable investments are:

a. Made in investee companies that demonstrate good governance;

b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

c. Made in investee companies that make a positive contribution towards an environmental or social objective. The Fund may allocate between Underlying Funds which make sustainable investments of any type, i.e. investments with an environmental, and/or a social objective. The Fund is not required to favour any specific type of sustainable investment.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective based on the policies adopted by the relevant Underlying Fund investment managers. These policies are considered as part of the Manager's initial and ongoing investment due diligence procedures and are assessed for alignment with the indicators set out in Table 1 and any relevant additional indicator from Tables 2 and 3 of Annex I of the Delegated Regulation.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Principal adverse impact ("PAI") indicators are calculated at both the Fund level and the Underlying Fund level. The results will be compared with that of a chosen proxy benchmark representative of the Fund's investment universe and/or peers. These calculations will be used as the basis of assessment of adverse impacts on sustainability factors in order to determine whether the Manager can improve at Fund level and/or where Manager can engage with Underlying Fund investment managers to improve at the Underlying Fund level. For example, Manager may engage on disclosure if a certain metric is materially misaligned with that of the chosen proxy and/or peers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments which the Fund makes in the Underlying Funds and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are assessed in the following ways;

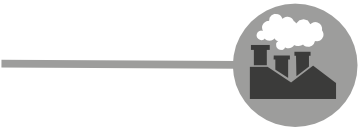
1. Via PAI monitoring of the following indicators;

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

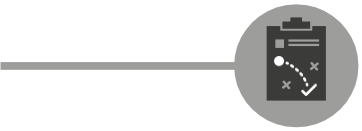
2. Through engagement with the Underlying Fund investment managers to ensure that the sustainable investments that the Underlying Funds makes are:

a. Made in investee companies that demonstrate good governance:



b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

c. Made in investee companies that make a positive contribution towards an environmental or social objective.



The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☑ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the Fund portfolio against mandatory and additional PAI indicators. Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report. The PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

☐ No

What investment strategy does this financial product follow?

The Fund is being structured as a Fund giving a return to investors at the Maturity Date. The Fund is organised in a manner that it has two separate investment objectives for different time periods in the Fund's life, as set out below. Please refer to the supplement to the Prospectus titled "FAM Megatrends Target 2026 III" (the "Supplement") for definitions of "Maturity Date" and "Subscription Period".

1. During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund. The Manager will seek to achieve this objective by investing principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-

coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

2. Following the Subscription Period, the investment objective of the Fund is to achieve long-term capital appreciation. The Fund seeks to achieve this investment objective in the following manner, as further set out in the Supplement:

    - By reducing the Fund's allocation to Initial Strategies on a monthly basis ("Averaging Out").

    - Every month the Fund will complete the Averaging Out process and the exposure to the Initial Strategies will be reduced and an exposure will be obtained to Underlying Funds as described in detail in the Supplement (the "Longer Term Strategies"). Every month the Fund will complete the Averaging Out process and the exposure to the Initial Strategies will be reduced and an exposure will be obtained to Underlying Funds as described in detail in the Supplement (the "Longer Term Strategies").

As part of the Longer Term Strategies, the Fund may invest principally in Underlying Funds that have a primary focus on providing exposure to equities issued by companies operating in sectors and geographical regions that benefit from ongoing global megatrends, as further described in the Supplement.

Although the Fund does not have a specific sustainable investment objective, the Manager has fully integrated the ESG Policy into the overall investment process, in particular, the portfolio construction process.

As part of the process to undertake appropriate due diligence on investments, the Manager will generally conduct a level of research on each Underlying Fund which will give the Investment Manager an understanding of the investments underpinning same. This includes a quantitative and qualitative assessment as detailed in the "Investment Objective and Policies" section of the Supplement which involves scrutiny relating to each Underlying Fund's approach to ESG factors and consideration of Sustainability Risks.

The Manager integrates these ESG factors and this Sustainability Risk assessment into its investment research process and its risk management process – both initially and on an ongoing basis for the duration of the period the Fund holds an investment or pursues a particular investment strategy.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

For investment in Underlying Funds, exclusions of the Underying Fund manager are assessed as part of the initial and ongoing due diligence process.

For any direct investment (i.e. non-underying fund investments), companies that are in breach of UN Global Compact principles (along with certain other Exclusion criteris) are excluded from the investment universe of the Fund as defined by the Manager. Where an investment is deemed inappropriate, no further investment may be made in the instrument, however existing holdings may be retained for a period of time to facilitate orderly divestment. For investment in underlying funds, exclusions of the underying fund manager are assessed as part of the initial and ongoing due diligence process.

For any direct investment (i.e. non-underying fund investments), the Manager recognises and adheres to the principle of responsible stewardship via sustainable proxy voting and collective enagement initiatives as a way of promoting good ESG policies.

The elements of the investment strategy to attain of the environmental or social characteristics promoted by this financial product as described above are systematically integrated throughout the investment process

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

a. Minimum investment in funds in scope of Article 8 and Article 9 SFDR

The Fund will invest a minimum of 90% in other funds which fall within the meaning of either Article 8 and/or Article 9 of the SFDR.

b. Minimum Underlying Fund score

80% of the Fund's Underlying Fund holdings will be rated A by MSCI ESG Manager (or an other corresponding rating from a similar rating provider). If the Sustainable Finance Committee of the Manager determines that the Underlying Fund in question has mitigating reasons for its MSCI ESG score to have fallen below A, the Underlying Fund holding may be maintained within the Fund portfolio.

c. Exclusion Policy

For any direct holdings (i.e. non-underying fund investments), the Manager's Exclusion Policy applies, and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

Not applicable

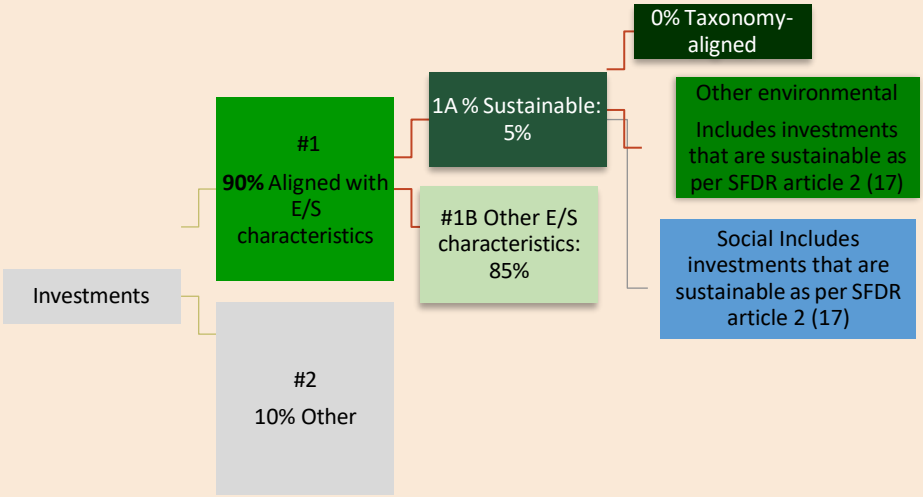
- ***What is the policy to assess good governance practices of the investee companies?***

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Good governance is assessed for Underlying Funds through engagement with the Underlying Fund manager via due diligence.

In addition, ensuring that a minimum of 90% of the portfolio is invested in funds which fall within the meaning of Article 8 or 9 of the SFDR, demonstrates that the Manager is limiting the Fund's investment universe of Underlying Funds to focus on those investment funds that must only invest in investee companies that demonstrate good governance practices (in compliance with SFDR).

What is the asset allocation planned for this financial product?



Asset allocation describes the share of investments in

Taxonomy-aligned activities are expressed as a

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU

by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments means the Fund's Net Asset Value which is the total market value of the product.

At least 80% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund. The Financial product also comments to a minimum proportion of 5% in sustainable investments. The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

The asset allocation may change over time and percentages may be updated in this appendix from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate underlying fund manager data and/or company or third-party data.

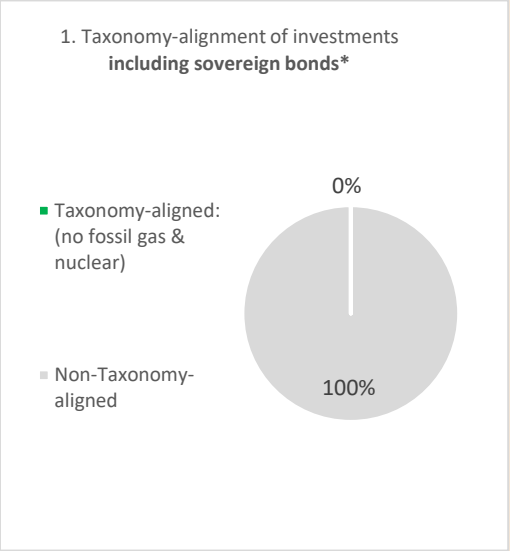
- ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**
  Derivatives are not used to attain the environmental or social characteristics promoted by this Fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

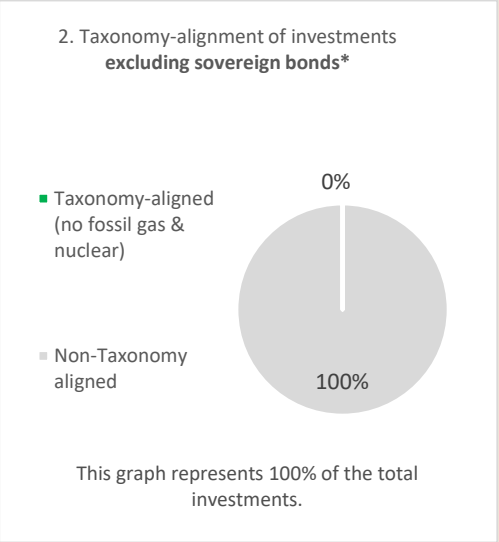
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities are** activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the best performance.

As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy1?



Yes:

In fossil gas In nuclear energy

No X

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

What is the minimum share of investments in transitional and enabling activities? 0%.

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

5%*.

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

5%*

*The Fund commits to invest at least 5% of its assets in sustainable investments. Within this overall commitment, there is no prioritisation of environmental and/or social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the Manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the managers exclusion policy.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Responsible Investment Policy, summary investment process and Exclusion Policy can be found on the Manager's website at the following link [FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)]

FAM SUSTAINABLE TARGET 2023 III

SUPPLEMENT DATED 21 May 2025

This Supplement contains specific information in relation to **FAM Sustainable Target 2023 III** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. An investment in the Fund involves certain investment risks, including the possible loss of principal. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Maturity Date	2 June 2023
Subscription Period	means the 60 calendar days following the end of Initial Offer Period or such longer or shorter period, as may be determined by the Directors in accordance with the requirements of the Central Bank.

Investment Objective and Policies

The Fund is being structured as a Fund giving a return to investors at the Maturity Date. The Fund is organised in a manner that it has two separate investment objectives for different time periods in the Fund's life as follows, and as explained in detail in each sub-section below:

1. **During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund; and**
2. **Following the Subscription Period, the investment objective of the Fund is to achieve long-term capital appreciation**.

As stated above, the main investment objective of the Fund is as set out in (2) above and in the section headed "After the Subscription Period and up to the Maturity Date". The reason for having a Subscription Period is to have a short 60 day time period during which the Fund will accept subscriptions and invest them in a manner designed to seek to achieve a positive investment return whilst maintaining liquidity for the Fund. After the Subscription Period subscriptions into the Fund are no longer accepted. Although the Fund will be closed for subscriptions after the Subscription Period, requests for redemptions received prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day (i.e. each Business Day) in accordance with the section of the Prospectus entitled **"**Redemption of Shares".

During the Subscription Period

During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund. The Manager will seek to achieve this objective by investing principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

Investment in the Initial Strategies will be selected on the basis that will result in the Fund having a weighted average interest rate duration of no longer than 2 years.

Selection of debt instruments

The debt instruments that may be part of the Initial Strategies will selected based on the Manager's top-down analysis, which includes a view on the global investment outlook and analysis of market opportunities and securities based on an assessment of factors such as income yield, credit risk and bond duration. The Manager's will assess each individual bond and the bond markets to understand the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the bonds under assessment. Following such credit assessment, the Manager appraises a potential investment in a bond in terms of relative value when compared to other bonds that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which bonds to acquire on behalf of the Fund. When an investment in a bond is made, it will be closely monitored by the Manager taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such bond will be kept under review by the Manager. The Manager may invest substantially or fully in government bonds issued by any Member State.

After the Subscription Period and up to the Maturity Date

Following the Subscription Period, the investment objective of the Fund is to achieve long-term capital appreciation.

The Fund seeks to achieve this objective in the following manner:

1. By reducing the Fund's allocation to Initial Strategies on a monthly basis ("Averaging Out").

   For example, it is anticipated that following the last day of the Subscription Period and on a monthly basis the Fund's asset allocation to Initial Strategies will reduce on average by 4.54% of the Fund's assets.

   The Manager, based on their discretion, can alter the above monthly amount by accelerating the reduction to the Initial Strategies according to their view of market conditions. The Manager's view on market conditions will be informed by a proprietary quantitative model designed by the Manager which is described below (the "Quant Model"). Each monthly reduction will be followed by a corresponding investment by the Fund into the Longer Term Strategies (described at point 2 below). This Averaging Out will continue every month up to the Maturity Date.

   The Manager will run the Quant Model in order to analyse market conditions which will inform them as to how much they should accelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies.

   This proprietary Quant Model allows the Manager assess market conditions using quantifiable, definitive and numerical data that can be used for checking portfolio return robustness via historical simulations; i.e. it is analysis on documented and definitive information on the past performance of the relevant market. The Quant Model will be based on technical and market indicators such as the relative strength index which analyses the historical strength or weakness of a stock or market based on closing prices of a recent trading period. The analysis produced by the Quant Model allows the Manager take advantage of favourable market conditions when assessing whether or not to increase the Averaging Out amount above 4.54% a month. Favourable market conditions in this context mean conditions that, once the Manager has run the Quant Model and assessed the resulting data and market indicators arising from the running of the Quant Model, indicate to the Manager that it is favourable for the Manager to accelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies at a favourable price.

   The Averaging Out process will occur every month, following the last day of the Subscription Period, for approximately 22 months up to the Maturity Date. At the Maturity Date, the Fund will be fully invested in the Longer Term Strategies. The gradual exposure of Shareholders to the Longer Term Strategies allows Shareholders obtain a diversified exposure to the market while neutralizing the effect of short-term price fluctuations in the broader market. In addition, the Quant Model allows the Manager the discretion to take advantage of favourable market conditions (described above) in respect of potentially accelerating Shareholders exposure to the Longer Term Strategies.

2. As described above, every month the Fund will complete the Averaging Out process and the exposure to the Initial Strategies will be reduced and an exposure will be obtained to Underlying Funds as described in detail immediately below (the "Longer Term Strategies"). As part of the Longer Term Strategies the Fund:

I. may invest principally in Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world, and which take account of any one or all of the following considerations, environmental, social responsibility and governance ("ESG"), as described below,

ESG considerations concern the selection of securities which provide exposure to organisations which hold the highest standards of sustainability, ethics and/or corporate governance.

The environmental element of ESG may look at how an organisation performs as a steward of the natural environment. The social element of ESG may examine how an organisation manages relationships with its employees, service providers and the community at large. The governance element of ESG may consider how an organisation's leadership, executive pay, audits and internal controls work whilst also understanding how shareholders are given the appropriate voting rights.

As responsible investing is the main focus of the Fund, the Manager will, in addition to the criteria outlined in the section entitled "Selection of Underlying Funds", seek to identify Underlying Funds managed by investment managers which have a commitment to responsible investing and which take account of the ESG criteria as described above. The Manager may do this by analysing if the relevant fund manager of the Underlying Fund is:

- A signatory to the United Nations supported Principles for Responsible Investment organisation or similar body which encourages a responsible approach to investing;
- Incorporating the assessment of ESG factors such as waste and pollution, working conditions and board diversity and structure as a key part of their investment process in identifying and evaluating a potential purchase or disposal of an investment;
- Employing a dedicated ESG analyst or team in respect of the implementation of their ESG strategy; and
- Actively engaging with companies in which they are invested and using their shareholder voting rights to promote ESG standards in these companies.

In the selection of the Underlying Funds the Manager will also assess whether or not the Underlying Fund has a sustainability rating or score provided by a recognised data service provider; and

II. may invest up to 20% of its Net Asset Value in units of Underlying Funds managed with absolute return investment strategies. These strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. These strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements;

III. may invest up to 20% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate.

At any time, the Fund may only have a maximum exposure of 30%, either directly or through Underlying Funds, to non-Investment Grade debt securities.

Selection of Underlying Funds

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which make up the Initial Strategies and the Longer Term Strategies.
The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in instruments that make up the Initial Strategies and Longer Term Strategies, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the

Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Fund also being managed by the Manager.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested "alternative investment funds" ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.[1]

[1] The Fund currently follows a fund of funds investment approach and can invest principally in UCITS or other investment funds that are eligible for investment by a UCITS as set out in the Prospectus and this Supplement. The Manager therefore relies on data provided by the investment managers of the Underlying Fund investments when calculating the minimum percentage proportion of sustainable investment of the Fund and when calculating the percentages required in the section of Annex II dealing with the planned asset allocation of the Fund.

SFDR Disclosures

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk and the Paris Aligned Benchmark Exclusions (the "**PAB Exclusions**").

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices)

and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend

markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund
as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the MSCI World Net Total Return Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility. The Fund is not designed for investors who need current income.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	20 May 2021 – 3 June 2021	Euro	No	Up to 2%	€1,000 / €100	Accumulating
Class D Acc	€100	20 May 2021 – 3 June 2021	Euro	No	No	€500 / €100	Accumulating

*Class D Shares in the Fund shall only be made available for subscription to such entities or persons as the Manager may determine from time to time in its absolute discretion.

During the Initial Offer Period, Shares are available for subscription at the Initial Offer Price, as indicated directly above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to the following management fee of the Net Asset Value of each Class of Shares:

Management Fee (% of NAV) of each Share Class	
During the Subscription Period	Up to 0.20%
After the Subscription Period up to the end of year 1	Up to 1.5%
After the end of year 1 up to the end of year 2	Up to 2.5%
After the end of year 2	Up to 2.5%

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first two years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Sales Charge
Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding, in which case, in order to avoid double charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors

The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus. In particular, investors should take the following risk factors into account: “General Risks”, “Investment Risk”, “Liquidity Risk”, “Redemption Risk”, “Credit Risk”, “Currency Risk”, “Share Currency Designation Risk”, “Risks Affect Specific Issuers”, “Derivatives Risk”, “Investing in Fixed Income Securities”, “Below Investment Grade Credit Risk”, “Changes in Interest Rates”, “Investment in Exchange Traded Funds (ETFs)” and “Additional Risks Applicable to Underlying Funds”. Nevertheless, such list is not deemed to be exhaustive and therefore investors are recommended to familiarise themselves with all risk factors described in the above-mentioned section of the Prospectus.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FAM SUSTAINABLE TARGET 2023 III
Legal entity identifier: 2549006QZFJMMZRVQP71

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective: ___%**	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 51% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective: ___%**	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The environmental and/or social characteristics of this product include:

a. **Minimum investment in funds falling within the meaning of Article 8 and 9 of the SFDR**

The Fund will invest a minimum of 90% in underlying funds classified as falling within the meaning of either Article 8 and/or Article 9 under SFDR, which means, that at a minimum, the majority of the underlying funds which the Fund holds promote

environmental and social characteristics while investing in companies which follow good governance practices.

b. Positive Screening

Consideration of environmental, social and governance ("ESG factors") are a key element of portfolio construction/fund selection. Portfolio managers will take a holistic approach which includes the analysis of ESG factors as part of their overall risk adjusted valuation assessment. This supports the overall promotion of investment in funds which the Manager deems desirable on ESG grounds. By incorporating positive ESG factors as part of the overall portfolio construction/fund selection, the Fund through its investments supports a tilt towards investment in underlying funds that have a more positive impact on the environment or society at large.

c. Fund Level ESG Scoring

A monthly independent analysis and classification of the Fund's ESG score is performed internally by the Manager. A minimum ESG scoring threshold is applied at Fund level to ensure that the Fund's ESG score does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control serves to highlight a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers on ESG topics.

d. Negative Screening (Norm-based exclusions)

For any potential direct holdings the Manager applies its basic exclusions (the "**Basic Exclusions**") as well as the PAB Exclusions in accordance with its Exclusion Policy. The Manager wants its funds under management to avoid making any investments which the Manager or its clients might deem incompatible with minimum responsible investing principles. To align the Fund's investments with this sustainable investment approach, Manager have adopted a firm wide exclusion policy which screens all investments for their compliance with minimum international standards and norms, from which an Exclusion List is derived..

Those exclusions currently include:

a. Issuers that breach the principles of the United Nations Global Compact;
b. Issuers involved in the manufacture or product life cycle of controversial weapons including biological and chemical weapons, cluster munitions and sub-munitions, depleted uranium, landmines including antipersonnel mine and nuclear weapons);
c. Issuers involved in the cultivation and production of tobacco
d. Issuers that derive 1% or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;
e. Issuers that derive 10% or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;
f. Issuers that derive 50% or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;
g. Issuers that derive 50% or more of their revenues from electricity generation with a GHF intensity of more than 100g C02 e/kWh
h. Issuers that contravene the United Nations Global Company labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards

The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy and the PAB Exclusions.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted.

- ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Fund uses the following indicator;

i. The percentage of the Fund portfolio made in sustainable investments;

ii. the percentage of the Fund's underlying fund holdings rated A by MSCI ESG Manager (or an other corresponding rating from a similar rating provider).

- ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments that the Fund intends to make is to promote environmental and/or social characteristics. On the basis that the Fund is currently following a fund of funds investment approach, the objectives of the sustainable investments that the Fund partially intends to make is linked to the sustainable investments made by the underlying funds. The Fund will seek to make investments in underlying funds that commit/partially commit to invest in sustainable investments and who have a process for ensuring that their sustainable investments are:

a. Made in investee companies that demonstrate good governance;

b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

c. Made in investee companies that make a positive contribution towards an environmental or social objective. The Fund may allocate between underlying funds which make sustainable investments of any type, i.e. investments with an environmental, and/or a social objective. The Fund is not required to favour any specific type of sustainable investment.

- ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective based on the policies adopted by the relevant underlying fund investment managers. These policies are considered as part of the Manager's initial and ongoing investment due diligence procedures and are assessed for alignment with the indicators set out in Table 1 and any relevant additional indicator from Tables 2 and 3 of Annex I of the Delegated Regulation and the approach taken by the Manager.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Principal adverse impact ("PAI") indicators are calculated at both the Fund level and the underlying fund level. The results will be compared with that of a chosen proxy benchmark representative of the Fund's investment universe and/or peers. These calculations will be used as the basis of assessment of adverse impacts on sustainability factors in order to determine whether the Manager can improve at Fund level and/or where Manager can engage with underlying fund investment managers to improve at the underlying fund level. For example, Manager may engage on disclosure if a certain metric is materially misaligned with that of the chosen proxy and/or peers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments which the Fund makes in the underlying funds and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are assessed in the following ways;

1. Via PAI monitoring of the following indicators;

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

2. Through engagement with the underlying fund investment managers to ensure that the sustainable investments that the underlying funds makes are:

    a. Made in investee companies that demonstrate good governance:

    b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

    c. Made in investee companies that make a positive contribution towards an environmental or social objective.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

☒ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the Fund portfolio against mandatory and additional PAI indicators. Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report. The PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The Fund is structured as a Fund giving a return to investors at the Maturity Date. The Fund is organised in a manner that it has two separate investment objectives for different time periods in the Fund's life, as set out below. Please refer to the supplement to the Prospectus titled "FAM Sustainable Target 2023 III" (the "Supplement") for definitions of "Maturity Date" and "Subscription Period".

1. During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund. The Manager will seek to achieve this objective by investing principally, either directly, or indirectly via units of underlying funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

2. Following the Subscription Period the investment objective of the Fund is to achieve medium to long-term capital appreciation. The Fund seeks to achieve this objective in the following manner, as further set out in the Supplement:

- By reducing the Fund's allocation to Initial Strategies on a monthly basis ("Averaging Out").

- Every month the Fund will complete the Averaging Out process and the exposure to the Initial Strategies will be reduced and an exposure will be obtained to underlying funds as described in detail in the Supplement (the "Longer Term Strategies").

As part of the Longer Term Strategies, the Fund may invest up to 100% of the Fund's assets in underlying funds that provide exposure to equities issued by companies incorporated anywhere in the world, and which take account of a number of ESG factors.

Although the Fund does not have a specific sustainable investment objective, the Fund will pursue an investment strategy that seeks to identify the best investment opportunities by integrating financial analysis with environmental, social responsibility and governance considerations. In order to meet such extra-financial characteristics, the target funds or the assets held directly by the Fund are assessed as related to sustainable and social criteria and where applicable, they must have an explicit commitment to responsible investing as per their investment process.

The ESG rating of each instrument held by the Fund should be reflected in an assessment, and ultimately in the decision on whether to invest in such instrument. The Fund will invest, directly or indirectly through open-ended UCIs and UCITS, in instruments that have better social or environmental ratings and/or are issued by issuers with better social or environmental practices. For example as stated above, the Fund currently intends to invest a minimum of 90% in other funds classified as either Article 8 and/or Article 9 under SFDR, which means, that at a minimum, the majority of the underlying funds which the Fund holds promote environmental and social characterisictics while investing in companies which follow good governance practices.

The Manager also maintains due diligence processes to assess the ESG commitments of underlying investments and underlying fund managers. To this end, the Manager, reviews and assesses on a periodic basis private and public information related to each issuer and/or relevant underlying fund manager, as applicable, and its ESG rating or characteristics. In addition to such assessment, the Manager will obtain from each issuer (and/or the relevant underlying fund manager, as the case may be), which has been selected for investment by the Fund, any information necessary to assess the ESG rating or characteristics of the relevant underlying investment.

For any direct investment (i.e. non-underying fund investments), companies that are in breach of UN Global Compact principles (along with certain other Exclusion criteris) are excluded from the investment universe of the Fund as defined by the Manager. Where an investment is deemed inappropriate, no further investment may be made in the instrument, however existing holdings may be retained for a period of time to facilitate orderly divestment. For investment in underlying funds, exclusions of the underying fund manager are assessed as part of the initial and ongoing due diligence process.

For any direct investment (i.e. non-underying fund investments), the Manager recognises and adheres to the principle of responsible stewardship via sustainable proxy voting and collective enagement initiatives as a way of promoting good ESG policies.

The elements of the investment strategy to attain of the environmental or social characteristics promoted by this financial product as described above are systematically integrated throughout the investment process

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

  a. **Minimum investment in funds falling within the meaning of Article 8 and Article 9 of the SFDR**
  The Fund will invest a minimum of 90% in other funds classified as falling within the meaning of either Article 8 and/or Article 9 under the SFDR.

  b. **Minimum underlying fund score**
  80% of the Fund's underlying fund holdings will be rated A by MSCI ESG Manager (or an other corresponding rating from a similar rating provider). If the Sustainable Finance Committee of the Manager determines that the underlying fund in question has mitigating reasons for its MSCI ESG score to have fallen below A, the underlying fund holding may be maintained within the Fund portfolio.

  c. **Exclusion Policy**
  For any direct holdings (i.e. non-underying fund investments), the Manager's Exclusion Policy applies, and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

  Not applicable

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

- ***What is the policy to assess good governance practices of the investee companies?***

  Good governance is assessed for underlying funds through engagement with the underlying fund manager via due diligence.

  In addition, ensuring that a minimum of 90% of the portfolio is invested in funds falling within the meaning of Article 8 or Article 9 of the SFDR, demonstrates that the Manager is limiting the Fund's investment universe of underlying funds to focus on those investment

funds that must only invest in investee companies that demonstrate good governance practices (in compliance with SFDR).

In addition, direct holdings (i.e. non-underlying fund investments) in the Fund must have a minimum rating of BB according to MSCI ESG Manager (or an other corresponding rating from a similar rating provider). This ensures a level of good governance vis a vis the above scores. Limited exceptions to this rule may apply.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments means the products Net Asset Value which is the total market value of the product.

At least 90% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund. The Financial product also comments to a minimum proportion of 51% in sustainable investments. The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

The asset allocation may change over time and percentages may be updated in this appendix from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate underlying fund manager data and/or company or third-party data.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

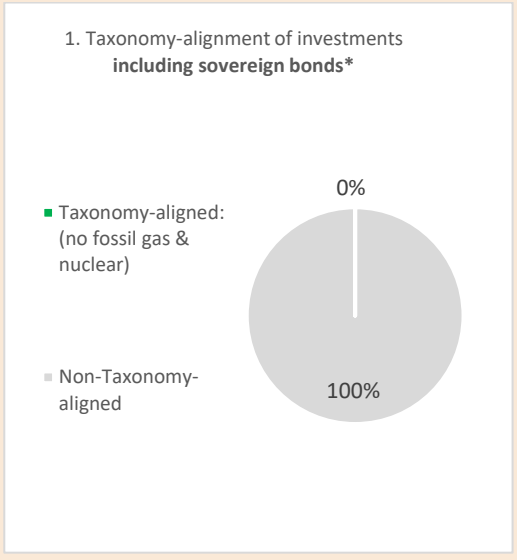
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities are** activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the best performance.

- ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**

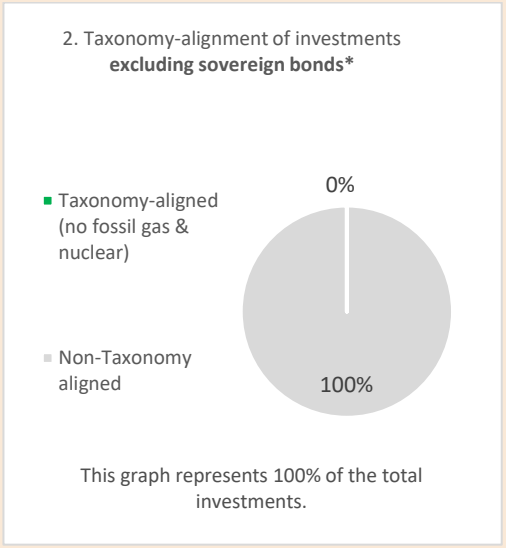
  Derivatives are not used to attain the environmental or social characteristics promoted by this Fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation.



- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy1?**



Yes:

In fossil gas In nuclear energy

No: X

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of investments in transitional and enabling activities? 0%.

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

51%*.

What is the minimum share of socially sustainable investments?

51%*.

*The Fund commits to invest at least 51% of its assets in sustainable investments. Within this overall commitment, there is no prioritisation of environmental and/or social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the Manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the Managers Exclusion Policy.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Responsible Investment Policy, summary investment process and Exclusion Policy can be found on the Manager's website at the following link: FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)

FAM SUSTAINABLE TARGET 2026 II

SUPPLEMENT DATED 21 MAY 2025

This Supplement contains specific information in relation to **FAM Sustainable Target 2026 II** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. An investment in the Fund involves certain investment risks, including the possible loss of principal. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Maturity Date	2 June 2026
Subscription Period	means the 60 calendar days following the end of Initial Offer Period or such longer or shorter period, as may be determined by the Directors in accordance with the requirements of the Central Bank.

Investment Objective and Policies

The Fund is being structured as a Fund giving a return to investors at the Maturity Date. The Fund is organised in a manner that it has two separate investment objectives for different time periods in the Fund's life as follows, and as explained in detail in each sub-section below:

1. **During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund; and**
2. **Following the Subscription Period, the investment objective of the Fund is to achieve long-term capital appreciation**.

As stated above, the main investment objective of the Fund is as set out in (2) above and in the section headed "After the Subscription Period and up to the Maturity Date". The reason for having a Subscription Period is to have a short 60 day time period during which the Fund will accept subscriptions and invest them in a manner designed to seek to achieve a positive investment return whilst maintaining liquidity for the Fund. After the Subscription Period subscriptions into the Fund are no longer accepted. Although the Fund will be closed for subscriptions after the Subscription Period, requests for redemptions received prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day (i.e. each Business Day) in accordance with the section of the Prospectus entitled **"**Redemption of Shares".

During the Subscription Period

During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund. The Manager will seek to achieve this objective by investing principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

Investment in the Initial Strategies will be selected on the basis that will result in the Fund having a weighted average interest rate duration of no longer than 4.5 years.

Selection of debt instruments

The debt instruments that may be part of the Initial Strategies will selected based on the Manager's top-down analysis, which includes a view on the global investment outlook and analysis of market opportunities and securities based on an assessment of factors such as income yield, credit risk and bond duration. The Manager's will assess each individual bond and the bond markets to understand the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the bonds under assessment. Following such credit assessment, the Manager appraises a potential investment in a bond in terms of relative value when compared to other bonds that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which bonds to acquire on behalf of the Fund. When an investment in a bond is made, it will be closely monitored by the Manager taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such bond will be kept under review by the Manager. The Manager may invest substantially or fully in government bonds issued by any Member State.

After the Subscription Period and up to the Maturity Date

Following the Subscription Period, the investment objective of the Fund is to achieve long-term capital appreciation.

The Fund seeks to achieve this objective in the following manner:

1. By reducing the Fund's allocation to Initial Strategies on a monthly basis ("Averaging Out").

   For example, it is anticipated that following the last day of the Subscription Period and on a monthly basis the Fund's asset allocation to Initial Strategies will reduce on average by 1.72% of the Fund's assets.

   The Manager, based on their discretion, can alter the above monthly amount by accelerating the reduction to the Initial Strategies according to their view of market conditions. The Manager's view on market conditions will be informed by a proprietary quantitative model designed by the Manager which is described below (the "Quant Model"). Each monthly reduction will be followed by a corresponding investment by the Fund into the Longer Term Strategies (described at point 2 below). This Averaging Out will continue every month up to the Maturity Date.

   The Manager will run the Quant Model in order to analyse market conditions which will inform them as to how much they should accelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies.

   This proprietary Quant Model allows the Manager assess market conditions using quantifiable, definitive and numerical data that can be used for checking portfolio return robustness via historical simulations; i.e. it is analysis on documented and definitive information on the past performance of the relevant market. The Quant Model will be based on technical and market indicators such as the relative strength index which analyses the historical strength or weakness of a stock or market based on closing prices of a recent trading period. The analysis produced by the Quant Model allows the Manager take advantage of favourable market conditions when assessing whether or not to increase the Averaging Out amount above 1.72% a month. Favourable market conditions in this context mean conditions that, once the Manager has run the Quant Model and assessed the resulting data and market indicators arising from the running of the Quant Model, indicate to the Manager that it is favourable for the Manager to accelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies at a favourable price.

   The Averaging Out process will occur every month, following the last day of the Subscription Period, for approximately 58 months up to the Maturity Date. At the Maturity Date, the Fund will be fully invested in the Longer Term Strategies. The gradual exposure of Shareholders to the Longer Term Strategies allows Shareholders obtain a diversified exposure to the market while neutralizing the effect of short-term price fluctuations in the broader market. In addition, the Quant Model allows the Manager the discretion to take advantage of favourable market conditions (described above) in respect of potentially accelerating Shareholders exposure to the Longer Term Strategies.

2. As described above, every month the Fund will complete the Averaging Out process and the exposure to the Initial Strategies will be reduced and an exposure will be obtained to Underlying Funds as described in detail immediately below (the "Longer Term Strategies"). As part of the Longer Term Strategies the Fund:

I. may invest principally in Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world, and which take account of any one or all of the following considerations, environmental, social responsibility and governance ("ESG"), as described below,

ESG considerations concern the selection of securities which provide exposure to organisations which hold the highest standards of sustainability, ethics and/or corporate governance.

The environmental element of ESG may look at how an organisation performs as a steward of the natural environment. The social element of ESG may examine how an organisation manages relationships with its employees, service providers and the community at large. The governance element of ESG may consider how an organisation's leadership, executive pay, audits and internal controls work whilst also understanding how shareholders are given the appropriate voting rights.

As responsible investing is the main focus of the Fund, the Manager will, in addition to the criteria outlined in the section entitled "Selection of Underlying Funds", seek to identify Underlying Funds managed by investment managers which have a commitment to responsible investing and which take account of the ESG criteria as described above. The Manager may do this by analysing if the relevant fund manager of the Underlying Fund is:

- A signatory to the United Nations supported Principles for Responsible Investment organisation or similar body which encourages a responsible approach to investing;
- Incorporating the assessment of ESG factors such as waste and pollution, working conditions and board diversity and structure as a key part of their investment process in identifying and evaluating a potential purchase or disposal of an investment;
- Employing a dedicated ESG analyst or team in respect of the implementation of their ESG strategy; and
- Actively engaging with companies in which they are invested and using their shareholder voting rights to promote ESG standards in these companies.

In the selection of the Underlying Funds the Manager will also assess whether or not the Underlying Fund has a sustainability rating or score provided by a recognised data service provider; and

II. may invest up to 20% of its Net Asset Value in units of Underlying Funds managed with absolute return investment strategies. These strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. These strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements;

III. may invest up to 20% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate.

At any time, the Fund may only have a maximum exposure of 30%, either directly or through Underlying Funds, to non-Investment Grade debt securities.

Selection of Underlying Funds

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which make up the Initial Strategies and the Longer Term Strategies.
The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in instruments that make up the Initial Strategies and Longer Term Strategies, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the

Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Fund also being managed by the Manager.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested "alternative investment funds" ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.[1]

[1] The Fund currently follows a fund of funds investment approach and can invest principally in UCITS or other investment funds that are eligible for investment by a UCITS as set out in the Prospectus and this Supplement. The Manager therefore relies on data provided by the investment managers of the Underlying Fund investments when calculating the minimum percentage proportion of sustainable investment of the Fund and when calculating the percentages required in the section of Annex II dealing with the planned asset allocation of the Fund.

SFDR Disclosures

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk) and the Paris Aligned Benchmark Exclusions (the "**PAB Exclusions**").

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices)

and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend

markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the MSCI World Net Total Return Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility. The Fund is not designed for investors who need current income.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	20 May 2021 - 3 June 2021	Euro	No	Up to 2%	€1,000 / €100	Accumulating
Class D Acc	€100	20 May 2021 - 3 June 2021	Euro	No	No	€500 / €100	Accumulating

*Class D Shares in the Fund shall only be made available for subscription to such entities or persons as the Manager may determine from time to time in its absolute discretion.

During the Initial Offer Period, Shares are available for subscription at the Initial Offer Price, as indicated directly above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to the following management fee of the Net Asset Value of each Class of Shares:

Management Fee (% of NAV) of each Share Class	
During the Subscription Period	Up to 0.20%
After the Subscription Period up to the end of year 1	Up to 1.5%
After the end of year 1 up to the end of year 2	Up to 2.5%
After the end of year 2	Up to 2.5%

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first two years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Sales Charge
Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding, in which case, in order to avoid double charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, investors should take the following risk factors into account: "General Risks", "Investment Risk", "Liquidity Risk", "Redemption Risk", "Credit Risk", "Currency Risk", "Share Currency Designation Risk", "Risks Affect Specific Issuers", "Derivatives Risk", "Investing in Fixed Income Securities", "Below Investment Grade Credit Risk", "Changes in Interest Rates", "Investment in Exchange Traded Funds (ETFs)" and "Additional Risks Applicable to Underlying Funds". Nevertheless, such list is not deemed to be exhaustive and therefore investors are recommended to familiarise themselves with all risk factors described in the above-mentioned section of the Prospectus.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FAM SUSTAINABLE TARGET 2026 II
Legal entity identifier: 254900S079XEG3803H83

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective: ___%**	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 51% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective: ___%**	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The environmental and/or social characteristics of this product include:

a. **Minimum investment in funds falling within the meaning of Article 8 and 9 of the SFDR**
The Fund will invest a minimum of 90% in underlying funds classified as falling within the meaning of either Article 8 and/or Article 9 under SFDR, which means, that at a minimum, the majority of the underlying funds which the Fund holds promote

environmental and social characteristics while investing in companies which follow good governance practices.

b. Positive Screening

Consideration of environmental, social and governance ("ESG factors") are a key element of portfolio construction/fund selection. Portfolio managers will take a holistic approach which includes the analysis of ESG factors as part of their overall risk adjusted valuation assessment. This supports the overall promotion of investment in funds which the Manager deems desirable on ESG grounds. By incorporating positive ESG factors as part of the overall portfolio construction/fund selection, the Fund through its investments supports a tilt towards investment in underlying funds that have a more positive impact on the environment or society at large.

c. Fund Level ESG Scoring

A monthly independent analysis and classification of the Fund's ESG score is performed internally by the Manager. A minimum ESG scoring threshold is applied at Fund level to ensure that the Fund's ESG score does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control serves to highlight a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers on ESG topics.

d. Negative Screening (Norm-based exclusions)

For any potential direct holdings the Manager applies its basic exclusions (the "**Basic Exclusions**") as well as the PAB Exclusions norms-based exclusions based on its Exclusion Policy . The Manager wants its funds under management to avoid making any investments which the Manager or its clients might deem incompatible with minimum responsible investing principles. To align the Fund's investments with this sustainable investment approach, Manager have adopted a firm wide exclusion policy which screens all investments for their compliance with minimum international standards and norms, from which an Exclusion List is derived..

Those exclusions currently include:

a. Issuers that breach the principles of the United Nations Global Compact;
b. Issuers involved in the manufacture or product life cycle of controversial weapons including biological and chemical weapons, cluster munitions and sub-munitions, depleted uranium, landmines including antipersonnel mine and nuclear weapons);
c. Issuers involved in the cultivation and production of tobacco
d. Issuers that derive 1% or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;
e. Issuers that derive 10% or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;
f. Issuers that derive 50% or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;
g. Issuers that derive 50% or more of their revenues from electricity generation with a GHF intensity of more than 100g C02 e/kWh
h. Issuers that contravene the United Nations Global Company labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards

The Manager also assesses whether or not the Underlying Fund manager applies any basic

exclusion policy and the PAB Exclusions.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted.

- ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Fund uses the following indicator;

i. The percentage of the Fund portfolio made in sustainable investments;

ii. the percentage of the Fund's underlying fund holdings rated A by MSCI ESG Manager (or an other corresponding rating from a similar rating provider).

- ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments that the Fund intends to make is to promote environmental and/or social characteristics. On the basis that the Fund is currently following a fund of funds investment approach, the objectives of the sustainable investments that the Fund partially intends to make is linked to the sustainable investments made by the underlying funds. The Fund will seek to make investments in underlying funds that commit/partially commit to invest in sustainable investments and who have a process for ensuring that their sustainable investments are:

a. Made in investee companies that demonstrate good governance;

b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

c. Made in investee companies that make a positive contribution towards an environmental or social objective. The Fund may allocate between underlying funds which make sustainable investments of any type, i.e. investments with an environmental, and/or a social objective. The Fund is not required to favour any specific type of sustainable investment.

- ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective based on the policies adopted by the relevant underlying fund investment managers. These policies are considered as part of the Manager's initial and ongoing investment due diligence procedures and are assessed for alignment with the indicators set out in Table 1 and any relevant additional indicator from Tables 2 and 3 of Annex I of the Delegated Regulation and the approach taken by the Manager.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Principal adverse impact ("PAI") indicators are calculated at both the Fund level and the underlying fund level. The results will be compared with that of a chosen proxy benchmark representative of the Fund's investment universe and/or peers. These calculations will be used as the basis of assessment of adverse impacts on sustainability factors in order to determine whether the Manager can improve at Fund level and/or where Manager can engage with underlying fund investment managers to improve at the underlying fund level. For example, Manager may engage on disclosure if a certain metric is materially misaligned with that of the chosen proxy and/or peers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments which the Fund makes in the underlying funds and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are assessed in the following ways;

1. Via PAI monitoring of the following indicators;

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

2. Through engagement with the underlying fund investment managers to ensure that the sustainable investments that the underlying funds makes are:

    a. Made in investee companies that demonstrate good governance:

    b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

    c. Made in investee companies that make a positive contribution towards an environmental or social objective.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

☒ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the Fund portfolio against mandatory and additional PAI indicators. Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report. The PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

☐ No

What investment strategy does this financial product follow?

The Fund is structured as a Fund giving a return to investors at the Maturity Date. The Fund is organised in a manner that it has two separate investment objectives for different time periods in the Fund's life, as set out below. Please refer to the supplement to the Prospectus titled "FAM Sustainable Target 2026 II" for definitions of "Maturity Date" and "Subscription Period".

1. During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund. The Manager will seek to achieve this objective by investing principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

2. Following the Subscription Period the investment objective of the Fund is to achieve medium to long-term capital appreciation. The Fund seeks to achieve this objective in the following manner:

- By reducing the Fund's allocation to Initial Strategies on a monthly basis ("Averaging Out").
- Every month the Fund will complete the Averaging Out process and the exposure to the Initial Strategies will be reduced and an exposure will be obtained to Underlying Funds as described in detail in the Supplement (the "Longer Term Strategies").

As part of the Longer Term Strategies, the Fund may invest up to 100% of the Fund's assets in underlying funds that provide exposure to equities issued by companies incorporated anywhere in the world, and which take account of a number of ESG factors.

Although the Fund does not have a specific sustainable investment objective, the Fund will pursue an investment strategy that seeks to identify the best investment opportunities by integrating financial analysis with environmental, social responsibility and governance considerations. In order to meet such extra-financial characteristics, the target funds or the assets held directly by the Fund are assessed as related to sustainable and social criteria and where applicable, they must have an explicit commitment to responsible investing as per their investment process.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The ESG rating of each instrument held by the Fund should be reflected in an assessment, and ultimately in the decision on whether to invest in such instrument. The Fund will invest, directly or indirectly through open-ended UCIs and UCITS, in instruments that have better social or environmental ratings and/or are issued by issuers with better social or environmental practices. For example as stated above, the Fund currently intends to invest a minimum of 90% in other funds classified as either Article 8 and/or Article 9 under SFDR, which means, that at a minimum, the majority of the underlying funds which the Fund holds promote environmental and social characterisictics while investing in companies which follow good governance practices.

The Manager also maintains due diligence processes to assess the ESG commitments of underlying investments and underlying fund managers. To this end, the Manager, reviews and assesses on a periodic basis private and public information related to each issuer and/or relevant underlying fund manager, as applicable, and its ESG rating or characteristics. In addition to such assessment, the Manager will obtain from each issuer (and/or the relevant underlying fund manager, as the case may be), which has been selected for investment by the Fund, any information necessary to assess the ESG rating or characteristics of the relevant underlying investment.

For any direct investment (i.e. non-underying fund investments), companies that are in breach of UN Global Compact principles (along with certain other Exclusion criteris) are excluded from the investment universe of the Fund as defined by the Manager. Where an investment is deemed inappropriate, no further investment may be made in the instrument, however existing holdings may be retained for a period of time to facilitate orderly divestment. For investment in underlying funds, exclusions of the underying fund manager are assessed as part of the initial and ongoing due diligence process.

For any direct investment (i.e. non-underying fund investments), the Manager recognises and adheres to the principle of responsible stewardship via sustainable proxy voting and collective enagement initiatives as a way of promoting good ESG policies.

The elements of the investment strategy to attain of the environmental or social characteristics promoted by this financial product as described above are systematically integrated throughout the investment process

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

  a. **Minimum investment in funds falling within the meaning of Article 8 and Article 9 of the SFDR**
  The Fund will invest a minimum of 90% in other funds classified as falling within the meaning of either Article 8 and/or Article 9 under the SFDR.

  b. **Minimum underlying fund score**
  80% of the Fund's underlying fund holdings will be rated A by MSCI ESG Manager (or an other corresponding rating from a similar rating provider). If the Sustainable Finance Committee of the Manager determines that the underlying fund in question has mitigating reasons for its MSCI ESG score to have fallen below A, the underlying fund holding may be maintained within the Fund portfolio.

  c. **Exclusion Policy**
  For any direct holdings (i.e. non-underying fund investments), the Manager's Exclusion Policy applies, and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

  Not applicable

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

- ***What is the policy to assess good governance practices of the investee companies?***

  Good governance is assessed for underlying funds through engagement with the underlying fund manager via due diligence.

  In addition, ensuring that a minimum of 90% of the portfolio is invested in funds falling within the meaning of Article 8 or Article 9 of the SFDR, demonstrates that the Manager is limiting the Fund's investment universe of underlying funds to focus on those investment funds that must only invest in investee companies that demonstrate good governance practices (in compliance with SFDR).

In addition, direct holdings (i.e. non-underlying fund investments) in the Fund must have a minimum rating of BB according to MSCI ESG Manager (or an other corresponding rating from a similar rating provider). This ensures a level of good governance vis a vis the above scores. Limited exceptions to this rule may apply.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments means the products Net Asset Value which is the total market value of the product.

At least 90% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund. The Financial product also comments to a minimum proportion of 51% in sustainable investments. The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

The asset allocation may change over time and percentages may be updated in this appendix from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate underlying fund manager data and/or company or third-party data.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

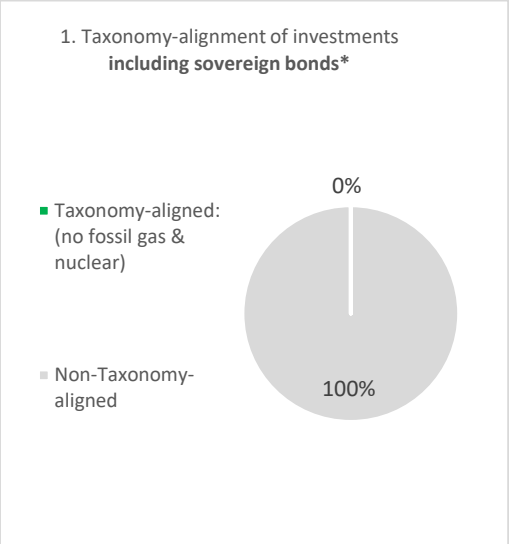
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities are** activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the best performance.

***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**

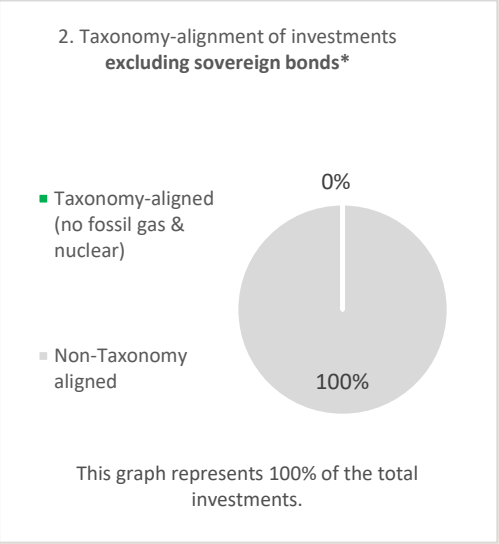
Derivatives are not used to attain the environmental or social characteristics promoted by this Fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[1]?



Yes:

In fossil gas In nuclear energy

No: X

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

What is the minimum share of investments in transitional and enabling activities? 0%.

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

51%*.

What is the minimum share of socially sustainable investments?

51%*.

*The Fund commits to invest at least 51% of its assets in sustainable investments. Within this overall commitment, there is no prioritisation of environmental and/or social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the Manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the Managers Exclusion Policy.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

More product-specific information can be found on the website:

FAM MEGATRENDS TARGET X

SUPPLEMENT DATED 30 JUNE 2025

This Supplement contains specific information in relation to **FAM MegaTrends Target X** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset- management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of the ICAV dated 1 December 2022 and each addendum thereto (together the "Prospectus").

The Fund may invest principally in units of Underlying Funds in such proportions as the Manager deems appropriate from time to time. Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. An investment in the Fund involves certain investment risks, including the possible loss of principal. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Subscription Period	The original Subscription Period closed in 2021 (the **Original Subscription Period**). The subsequent Subscription Period means the 60 calendar days from 1 July 2025 to 1 September 2025 or such longer or shorter period, as may be determined by the Directors and on a quarterly basis thereafter at the discretion of the Directors and once notified in advance to Shareholder. Shares will be available for subscription during this time, at the prevailing Net Asset Value (NAV) per Share.

Investment Objective and Policies

The investment objective of the Fund is to achieve long-term capital appreciation.

The Fund:

I. may invest principally in Underlying Funds that provide exposure to equities issued by companies operating in sectors and geographical regions that benefit from ongoing global megatrends.

Global megatrends ("Megatrends") are generally defined as global forces of development that create fundamental shifts in the progress of society thus impacting business, the economy, culture and the way we live. Examples of Megatrends that are currently reshaping our world are: demographic and social changes, climate change and resource scarcity, technological breakthroughs and rapid urbanization. Megatrends evolve independently of the economic cycle and, thus, possess the capacity to continuously redraw the financial landscape. By underpinning these Megatrends, it is possible to identify investment sub-themes which act as both drivers and beneficiaries of these Megatrends.

A summary of some of the sub-themes of the abovementioned Megatrends prevalent in the world today are listed below. Potential Shareholders should be aware that the below listed headings are examples of certain sub-themes of Megatrends and are for illustrative purposes only. It is important for potential Shareholders to note that what constitutes a Megatrend sub-theme today may not be classed as such in the future. This is not intended

to be an exhaustive list and these sub-themes have the ability to change over time. Therefore, the Fund does not commit to definitively invest in each or all of these Megatrend sub-themes at any time:

- Ageing Population: The ageing of the world's population is widely considered one of the most enduring demographic shifts in human history. Companies which have a focus on improving developments in healthcare, developments in Biotechnology and shifting consumer trends leading to a longer life expectancy are in a position to benefit greatly from this trend;
- Oncology: With cancer diagnoses expected to increase in the next 20 years, companies which are committing capital to cancer research to develop better diagnostics to cure cancer are in a position to benefit from developments in the treatment of cancer;
- Water: Population growth, urbanization and water-intensive dietary changes are adding to rising industrial water demand. Companies at the forefront of new technologies required to accommodate increasing global demand for water are well placed to benefit from this trend;
- Electric & Autonomous Vehicles: With a shift away from internal combustion engine vehicles and movement toward the broad usage of autonomous vehicles, manufacturers of both electric and autonomous vehicles as well as their components and other companies in the supply chain all stand to be beneficiaries from this trend; and
- Drones: Extensive growth in consumer and commercial drone usage means that companies involved in the production of these technologies will benefit from this evolving trend.

II. may invest up to 20% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate;

III. may invest up to 20% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and

At any time, the Fund may only have a maximum exposure of 30%, either directly or through Underlying Funds, to non-Investment Grade debt securities.

Selection of Underlying Funds

.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation,

selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds being managed by the Manager.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on the Recognised Markets.

Underlying Funds
The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in alternative investment funds ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.[1]

SFDR Disclosures

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of the SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in

order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the MSCI World Net Total Return Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility. The Fund is not designed for investors who need current income.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	Closed	Euro	No	Up to 2%	€1,000 / €100	Accumulating
Class D Acc	€100	Closed	Euro	No	No	€500 / €100	Accumulating

During the Initial Offer Period, Shares are available for subscription at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to the following management fee of the Net Asset Value of each Class of Shares:

Management Fee (% of NAV) for each Share Class	
During the Original Subscription Period	Up to 0.20%
After the Original Subscription Period up to the end of year 1	Up to 1.50%
After the end of year 1 up to the end of year 2	Up to 2.50%
After the end of year 2	Up to 2.50%

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding, in which case, in order to avoid double charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first two years of the Fund's operation (or such other period as may be determined by the Directors at their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, investors should take the following risk factors into account: "General Risks", "Investment Risk", "Liquidity Risk", "Redemption Risk", "Credit Risk", "Currency Risk", "Share Currency Designation Risk", "Risks Affect Specific Issuers", "Derivatives Risk", "Investing in Fixed Income Securities", "Below Investment Grade Credit Risk", "Changes in Interest Rates", "Investment in Exchange Traded Funds (ETFs)" and "Additional Risks Applicable to Underlying Funds". Nevertheless, such list is not deemed to be exhaustive and therefore investors are recommended to familiarise themselves with all risk factors described in the above-mentioned section of the Prospectus.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FAM MEGATRENDS TARGET X
Legal entity identifier: 254900R5WK097PCYYI29

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The environmental and/or social characteristics of this product include:

a. **Minimum investment in funds in scope of Article 8 and 9 of the SFDR**
The Fund will invest a minimum of 90% in Underlying Funds which fall within the meaning of either Article 8 or Article 9 of the SFDR, which means, that at a minimum, the majority of the Underlying Funds which the Fund holds promote environmental and social characteristics while investing in companies which follow good governance practices.

b. Positive Screening

Consideration of ESG factors are a key element of portfolio construction/fund selection. Portfolio managers will take a holistic approach which includes the analysis of ESG factors as part of their overall risk adjusted valuation assessment. This supports the overall promotion of investment in funds which the Manager deems desirable on ESG grounds. By incorporating positive ESG factors as part of the overall portfolio construction/fund selection, the Fund through its investments supports a tilt towards investment in Underlying Funds that have a more positive impact on the environment or society at large.

c. Fund Level ESG Scoring

A monthly independent analysis and classification of the Fund's ESG score is performed internally by the Manager. A minimum ESG scoring threshold is applied at Fund Level to ensure that the Fund's ESG score does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control serves to highlight a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers on ESG topics.

d. Negative Screening (Norm-based exclusions)

For any potential direct holdings the Manager applies norms-based exclusions based on its Exclusion Policy. The Manager wants its funds under management to avoid making any investments which the Manager or its clients might deem incompatible with minimum responsible investing principles. To align the Fund's investments with this sustainable investment approach, Manager have adopted a firm wide exclusion policy which screens all investments for their compliance with minimum international standards and norms, from which an Exclusion List is derived..

Exclusion categories considered in the Exclusion Policy are:

- United Nations Global Compact Principles
- Controversial Weapons
- Tobacco
- Climate Change
- Forced Labour

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Fund uses the following indicator;

i. The percentage of the Fund portfolio made in sustainable investments;

ii. the percentage of the Fund's Underlying Fund holdings rated A or above by MSCI ESG Manager (or another corresponding rating from a similar rating provider).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments that the Fund intends to make is to promote environmental and/or social characteristics. On the basis that the Fund is currently following

a fund of funds investment approach, the objectives of the sustainable investments that the Fund partially intends to make is linked to the sustainable investments made by the Underlying Funds. The Fund will seek to make investments in Underlying Funds that commit/partially commit to invest in sustainable investments and who have a process for ensuring that their sustainable investments are:

a. Made in investee companies that demonstrate good governance;

b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

c. Made in investee companies that make a positive contribution towards an environmental or social objective. The Fund may allocate between Underlying Funds which make sustainable investments of any type, i.e. investments with an environmental, and/or a social objective. The Fund is not required to favour any specific type of sustainable investment.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective based on the policies adopted by the relevant Underlying Fund investment managers. These policies are considered as part of the Manager's initial and ongoing investment due diligence procedures and are assessed for alignment with the indicators set out in Table 1 and any relevant additional indicator from Tables 2 and 3 of Annex I of the Delegated Regulation.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Principal adverse impact ("PAI") indicators are calculated at both the Fund level and the Underlying Fund level. The results will be compared with that of a chosen proxy benchmark representative of the Fund's investment universe and/or peers. These calculations will be used as the basis of assessment of adverse impacts on sustainability factors in order to determine whether the Manager can improve at Fund level and/or where Manager can engage with Underlying Fund investment managers to improve at the Underlying Fund level. For example, Manager may engage on disclosure if a certain metric is materially misaligned with that of the chosen proxy and/or peers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments which the Fund makes in the Underlying Funds and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are assessed in the following ways;

1. Via PAI monitoring of the following indicators;

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

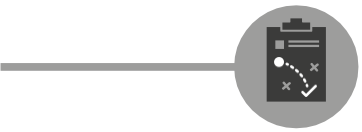
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

2. Through engagement with the Underlying Fund investment managers to ensure that the sustainable investments that the Underlying Funds makes are:

a. Made in investee companies that demonstrate good governance:

b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

c. Made in investee companies that make a positive contribution towards an environmental or social objective.



The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☑ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the Fund portfolio against mandatory and additional PAI indicators. Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report. The PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

☐ No

What investment strategy does this financial product follow?

The

investment objective of the Fund is to achieve long-term capital appreciation. The

Fund may invest principally in Underlying Funds that provide exposure to equities issued by companies operating in sectors and geographical regions that benefit from ongoing global megatrends, as further described in the Supplement.

Although the Fund does not have a specific sustainable investment objective, the Manager has fully integrated the ESG Policy into the overall investment process, in particular, the portfolio construction process.

As part of the process to undertake appropriate due diligence on investments, the Manager will generally conduct a level of research on each Underlying Fund which will give the Investment Manager an understanding of the investments underpinning same. This includes a quantitative and qualitative assessment as detailed in the "Investment

Objective and Policies" section of the Supplement which involves scrutiny relating to each Underlying Fund's approach to ESG factors and consideration of Sustainability Risks.

The Manager integrates these ESG factors and this Sustainability Risk assessment into its investment research process and its risk management process – both initially and on an ongoing basis for the duration of the period the Fund holds an investment or pursues a particular investment strategy.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

For investment in Underlying Funds, exclusions of the Underying Fund manager are assessed as part of the initial and ongoing due diligence process.

For any direct investment (i.e. non-underying fund investments), companies that are in breach of UN Global Compact principles (along with certain other Exclusion criteris) are excluded from the investment universe of the Fund as defined by the Manager. Where an investment is deemed inappropriate, no further investment may be made in the instrument, however existing holdings may be retained for a period of time to facilitate orderly divestment. For investment in underlying funds, exclusions of the underying fund manager are assessed as part of the initial and ongoing due diligence process.

For any direct investment (i.e. non-underying fund investments), the Manager recognises and adheres to the principle of responsible stewardship via sustainable proxy voting and collective enagement initiatives as a way of promoting good ESG policies.

The elements of the investment strategy to attain of the environmental or social characteristics promoted by this financial product as described above are systematically integrated throughout the investment process

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

a. Minimum investment in funds in scope of Article 8 and Article 9 SFDR

The Fund will invest a minimum of 90% in other funds which fall within the meaning of either Article 8 and/or Article 9 of the SFDR.

b. Minimum Underlying Fund score

80% of the Fund's Underlying Fund holdings will be rated A by MSCI ESG Manager (or an other corresponding rating from a similar rating provider). If the Sustainable Finance Committee of the Manager determines that the Underlying Fund in question has mitigating reasons for its MSCI ESG score to have fallen below A, the Underlying Fund holding may be maintained within the Fund portfolio.

c. Exclusion Policy

For any direct holdings (i.e. non-underying fund investments), the Manager's Exclusion Policy applies, and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

Not applicable

- ***What is the policy to assess good governance practices of the investee companies?***

Good governance is assessed for Underlying Funds through engagement with the Underlying Fund manager via due diligence.

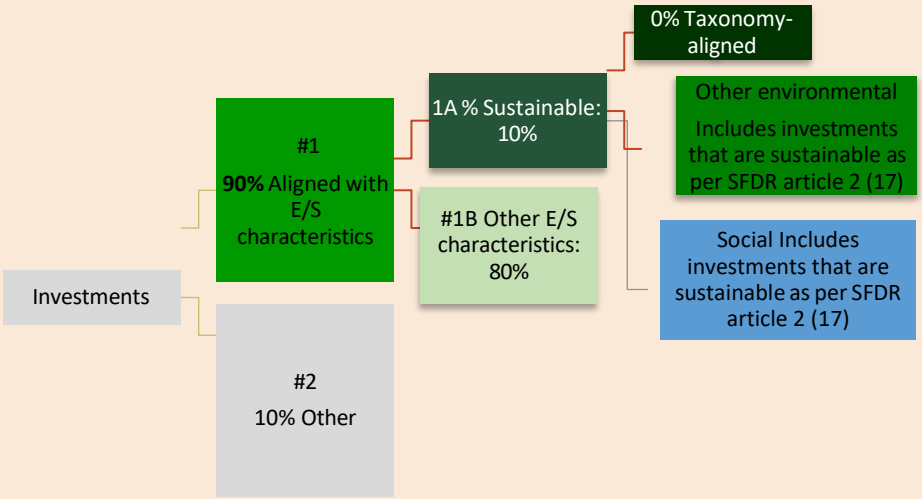
In addition, ensuring that a minimum of 90% of the portfolio is invested in funds which fall within the meaning of Article 8 or 9 of the SFDR, demonstrates that the Manager is limiting the Fund's investment universe of Underlying Funds to focus on those investment funds that must only invest in investee companies that demonstrate good governance practices (in compliance with SFDR).

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the asset allocation planned for this financial product?

*Investments means the Fund's Net Asset Value which is the total market value of the product.

Asset allocation describes the share of investments in



Taxonomy-aligned activities are expressed as a

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU

by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

At least 80% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund. The Financial product also comments to a minimum proportion of 10% in sustainable investments. The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

The asset allocation may change over time and percentages may be updated in this appendix from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate underlying fund manager data and/or company or third-party data.

***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**

Derivatives are not used to attain the environmental or social characteristics promoted by this Fund.

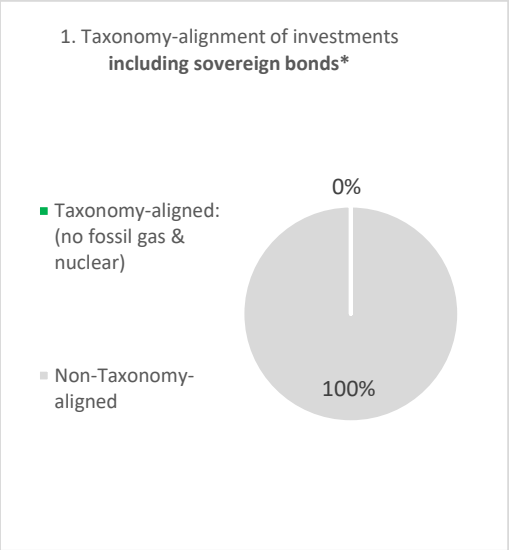
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It

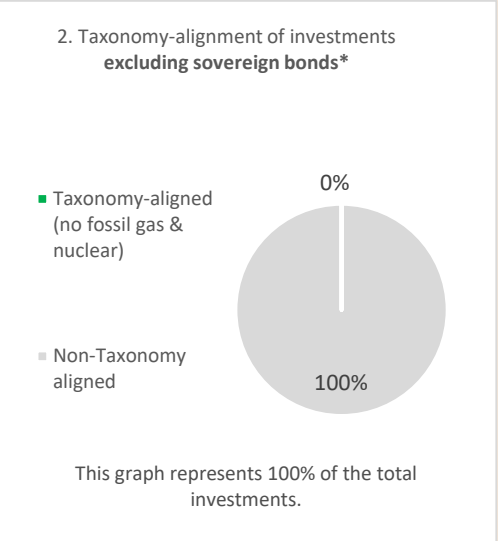
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities are** activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the best performance.

follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[1]?



Yes:

In fossil gas In nuclear energy

No: x

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

What is the minimum share of investments in transitional and enabling activities? 0%.

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

10%*.

What is the minimum share of socially sustainable investments?

10%*

*The Fund commits to invest at least 10% of its assets in sustainable investments. Within this overall commitment, there is no prioritisation of environmental and/or social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

categories. The investment process accommodates the combination of environmental and social objectives by allowing the Manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the managers exclusion policy.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Fund, including the Responsible Investment Policy and Exclusion Policy can be found on the Manager's website at the following link FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)

FAM SUSTAINABLE TARGET 2023 IV

SUPPLEMENT DATED 21 MAY 2025

This Supplement contains specific information in relation to **FAM Sustainable Target 2023 IV** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

This Fund may invest principally in units of Underlying Funds in such proportions as the Manager deems appropriate from time to time. Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. An investment in the Fund involves certain investment risks, including the possible loss of principal. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Maturity Date	8 September 2023
Subscription Period	means the 60 calendar days following the end of Initial Offer Period or such longer or shorter period, as may be determined by the Directors in accordance with the requirements of the Central Bank.

Investment Objective and Policies

The Fund is being structured as a Fund giving a return to investors at the Maturity Date. The Fund is organised in a manner that it has two separate investment objectives for different time periods in the Fund's life as follows, and as explained in detail in each sub-section below:

1. **During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund; and**
2. **Following the Subscription Period, the investment objective of the Fund is to achieve long-term capital appreciation**.

As stated above, the main investment objective of the Fund is as set out in (2) above and in the section headed "After the Subscription Period and up to the Maturity Date". The reason for having a Subscription Period is to have a short 60 day time period during which the Fund will accept subscriptions and invest them in a manner designed to seek to achieve a positive investment return whilst maintaining liquidity for the Fund. After the Subscription Period subscriptions into the Fund are no longer accepted. Although the Fund will be closed for subscriptions after the Subscription Period, requests for redemptions received prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day (i.e. each Business Day) in accordance with the section of the Prospectus entitled **"**Redemption of Shares".

During the Subscription Period

During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund. The Manager will seek to achieve this objective by investing principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

Investment in the Initial Strategies will be selected on the basis that will result in the Fund having a weighted average interest rate duration of no longer than 2 years.

Selection of debt instruments

The debt instruments that may be part of the Initial Strategies will selected based on the Manager's top-down analysis, which includes a view on the global investment outlook and analysis of market opportunities and securities based on an assessment of factors such as income yield, credit risk and bond duration. The Manager's will assess each individual bond and the bond markets to understand the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the bonds under assessment. Following such credit assessment, the Manager appraises a potential investment in a bond in terms of relative value when compared to other bonds that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which bonds to acquire on behalf of the Fund. When an investment in a bond is made, it will be closely monitored by the Manager taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such bond will be kept under review by the Manager. The Manager may invest substantially or fully in government bonds issued by any Member State.

After the Subscription Period and up to the Maturity Date

Following the Subscription Period, the investment objective of the Fund is to achieve long-term capital appreciation.

The Fund seeks to achieve this objective in the following manner:

1. By reducing the Fund's allocation to Initial Strategies on a monthly basis ("Averaging Out").

   For example, it is anticipated that following the last day of the Subscription Period and on a monthly basis the Fund's asset allocation to Initial Strategies will reduce on average by 4.54% of the Fund's assets.

   The Manager, based on their discretion, can alter the above monthly amount by accelerating the reduction to the Initial Strategies according to their view of market conditions. The Manager's view on market conditions will be informed by a proprietary quantitative model designed by the Manager which is described below (the "Quant Model"). Each monthly reduction will be followed by a corresponding investment by the Fund into the Longer Term Strategies (described at point 2 below). This Averaging Out will continue every month up to the Maturity Date.

   The Manager will run the Quant Model in order to analyse market conditions which will inform them as to how much they should accelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies.

   This proprietary Quant Model allows the Manager assess market conditions using quantifiable, definitive and numerical data that can be used for checking portfolio return robustness via historical simulations; i.e. it is analysis on documented and definitive information on the past performance of the relevant market. The Quant Model will be based on technical and market indicators such as the relative strength index which analyses the historical strength or weakness of a stock or market based on closing prices of a recent trading period. The analysis produced by the Quant Model allows the Manager take advantage of favourable market conditions when assessing whether or not to increase the Averaging Out amount above 4.54% a month. Favourable market conditions in this context mean conditions that, once the Manager has run the Quant Model and assessed the resulting data and market indicators arising from the running of the Quant Model, indicate to the Manager that it is favourable for the Manager to accelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies at a favourable price.

   The Averaging Out process will occur every month, following the last day of the Subscription Period, for approximately 22 months up to the Maturity Date. At the Maturity Date, the Fund will be fully invested in the Longer Term Strategies. The gradual exposure of Shareholders to the Longer Term Strategies allows Shareholders obtain a diversified exposure to the market while neutralizing the effect of short-term price fluctuations in the broader market. In addition, the Quant Model allows the Manager the discretion to take advantage of favourable market conditions (described above) in respect of potentially accelerating Shareholders exposure to the Longer Term Strategies.

2. As described above, every month the Fund will complete the Averaging Out process and the exposure to the Initial Strategies will be reduced and an exposure will be obtained to Underlying Funds as described in detail immediately below (the "Longer Term Strategies"). As part of the Longer Term Strategies the Fund:

   I. may invest principally in Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world, and which take account of any one or all

of the following considerations, environmental, social responsibility and governance ("ESG"), as described below,

ESG considerations concern the selection of securities which provide exposure to organisations which hold the highest standards of sustainability, ethics and/or corporate governance.

The environmental element of ESG may look at how an organisation performs as a steward of the natural environment. The social element of ESG may examine how an organisation manages relationships with its employees, service providers and the community at large. The governance element of ESG may consider how an organisation's leadership, executive pay, audits and internal controls work whilst also understanding how shareholders are given the appropriate voting rights.

As responsible investing is the main focus of the Fund, the Manager will, in addition to the criteria outlined in the section entitled "Selection of Underlying Funds", seek to identify Underlying Funds managed by investment managers which have a commitment to responsible investing and which take account of the ESG criteria as described above. The Manager may do this by analysing if the relevant fund manager of the Underlying Fund is:

- A signatory to the United Nations supported Principles for Responsible Investment organisation or similar body which encourages a responsible approach to investing;
- Incorporating the assessment of ESG factors such as waste and pollution, working conditions and board diversity and structure as a key part of their investment process in identifying and evaluating a potential purchase or disposal of an investment;
- Employing a dedicated ESG analyst or team in respect of the implementation of their ESG strategy; and
- Actively engaging with companies in which they are invested and using their shareholder voting rights to promote ESG standards in these companies.

In the selection of the Underlying Funds the Manager will also assess whether or not the Underlying Fund has a sustainability rating or score provided by a recognised data service provider; and

II. may invest up to 20% of its Net Asset Value in units of Underlying Funds managed with absolute return investment strategies. These strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. These strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements;

III. may invest up to 20% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate.

At any time, the Fund may only have a maximum exposure of 30%, either directly or through Underlying Funds, to non-Investment Grade debt securities.

Selection of Underlying Funds

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which make up the Initial Strategies and the Longer Term Strategies.
The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in instruments that make up the Initial Strategies and Longer Term Strategies, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds'

investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Fund also being managed by the Manager.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested "alternative investment funds" ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.[1]

SFDR Disclosures

[1] The Fund currently follows a fund of funds investment approach and can invest principally in UCITS or other investment funds that are eligible for investment by a UCITS as set out in the Prospectus and this Supplement. The Manager therefore relies on data provided by the investment managers of the Underlying Fund investments when calculating the minimum percentage proportion of sustainable investment of the Fund and when calculating the percentages required in the section of Annex II dealing with the planned asset allocation of the Fund.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk and the Paris Aligned Benchmark Exclusions (the "**PAB Exclusions**").

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge

the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the MSCI World Net Total Return Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility. The Fund is not designed for investors who need current income.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	19 August 2021 – 7 September 2021	Euro	No	Up to 2%	€1,000 / €100	Accumulating
Class D Acc	€100	19 August 2021 – 7 September 2021	Euro	No	No	€500 / €100	Accumulating

During the Initial Offer Period, Shares are available for subscription at the Initial Offer Price, as indicated directly above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to the following management fee of the Net Asset Value of each Class of Shares:

Management Fee (% of NAV) of each Share Class	
During the Subscription Period	Up to 0.20%
After the Subscription Period up to the end of year 1	Up to 1.5%
After the end of year 1 up to the end of year 2	Up to 2.5%
After the end of year 2	Up to 2.5%

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first two years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Sales Charge
Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding, in which case, in order to avoid double charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular,

investors should take the following risk factors into account: “General Risks”, “Investment Risk”, “Liquidity Risk”, “Redemption Risk”, “Credit Risk”, “Currency Risk”, “Share Currency Designation Risk”, “Risks Affect Specific Issuers”, “Derivatives Risk”, “Investing in Fixed Income Securities”, “Below Investment Grade Credit Risk”, “Changes in Interest Rates”, “Investment in Exchange Traded Funds (ETFs)” and “Additional Risks Applicable to Underlying Funds”. Nevertheless, such list is not deemed to be exhaustive and therefore investors are recommended to familiarise themselves with all risk factors described in the above-mentioned section of the Prospectus.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FAM SUSTAINABLE TARGET 2023 IV
Legal entity identifier: 2549008J0AEVQHN1IN68

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

- ☐ **Yes**
- ☒ **No**

- ☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%
  - ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 51% of sustainable investments
  - ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
  - ☒ with a social objective
- ☐ It will make a minimum of **sustainable investments with a social objective:** ___%
- ☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The environmental and/or social characteristics of this product include:

a. **Minimum investment in funds falling within the meaning of Article 8 and 9 of the SFDR**
The Fund will invest a minimum of 90% in underlying funds classified as falling within the meaning of either Article 8 and/or Article 9 under SFDR, which means, that at a minimum, the majority of the underlying funds which the Fund holds promote

environmental and social characteristics while investing in companies which follow good governance practices.

b. Positive Screening

Consideration of environmental, social and governance ("ESG factors") are a key element of portfolio construction/fund selection. Portfolio managers will take a holistic approach which includes the analysis of ESG factors as part of their overall risk adjusted valuation assessment. This supports the overall promotion of investment in funds which the Manager deems desirable on ESG grounds. By incorporating positive ESG factors as part of the overall portfolio construction/fund selection, the Fund through its investments supports a tilt towards investment in underlying funds that have a more positive impact on the environment or society at large.

c. Fund Level ESG Scoring

A monthly independent analysis and classification of the Fund's ESG score is performed internally by the Manager. A minimum ESG scoring threshold is applied at Fund level to ensure that the Fund's ESG score does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control serves to highlight a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers on ESG topics.

d. Negative Screening (Norm-based exclusions)

For any potential direct holdings the Manager applies its basic exclusions (the "**Basic Exclusions**") as well as the PAB Exclusions in accordance with its Exclusion Policy. The Manager wants its funds under management to avoid making any investments which the Manager or its clients might deem incompatible with minimum responsible investing principles. To align the Fund's investments with this sustainable investment approach, Manager have adopted a firm wide exclusion policy which screens all investments for their compliance with minimum international standards and norms, from which an Exclusion List is derived..

Those exclusions currently include:

a. Issuers that breach the principles of the United Nations Global Compact;
b. Issuers involved in the manufacture or product life cycle of controversial weapons including biological and chemical weapons, cluster munitions and sub-munitions, depleted uranium, landmines including antipersonnel mine and nuclear weapons);
c. Issuers involved in the cultivation and production of tobacco
d. Issuers that derive 1% or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;
e. Issuers that derive 10% or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;
f. Issuers that derive 50% or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;
g. Issuers that derive 50% or more of their revenues from electricity generation with a GHF intensity of more than 100g C02 e/kWh
h. Issuers that contravene the United Nations Global Company labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards

The Management Company also assesses whether or not the Underlying Fund manager applies any basic exclusion policy and the PAB Exclusions.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted.

- ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Fund uses the following indicator;

i. The percentage of the Fund portfolio made in sustainable investments;

ii. the percentage of the Fund's underlying fund holdings rated A by MSCI ESG Manager (or an other corresponding rating from a similar rating provider).

- ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments that the Fund intends to make is to promote environmental and/or social characteristics. On the basis that the Fund is currently following a fund of funds investment approach, the objectives of the sustainable investments that the Fund partially intends to make is linked to the sustainable investments made by the underlying funds. The Fund will seek to make investments in underlying funds that commit/partially commit to invest in sustainable investments and who have a process for ensuring that their sustainable investments are:

a. Made in investee companies that demonstrate good governance;

b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

c. Made in investee companies that make a positive contribution towards an environmental or social objective. The Fund may allocate between underlying funds which make sustainable investments of any type, i.e. investments with an environmental, and/or a social objective. The Fund is not required to favour any specific type of sustainable investment.

- ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective based on the policies adopted by the relevant underlying fund investment managers. These policies are considered as part of the Manager's initial and ongoing investment due diligence procedures and are assessed for alignment with the indicators set out in Table 1 and any relevant additional indicator from Tables 2 and 3 of Annex I of the Delegated Regulation and the approach taken by the Manager.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Principal adverse impact ("PAI") indicators are calculated at both the Fund level and the underlying fund level. The results will be compared with that of a chosen proxy benchmark representative of the Fund's investment universe and/or peers. These calculations will be used as the basis of assessment of adverse impacts on sustainability factors in order to determine whether the Manager can improve at Fund level and/or where Manager can engage with underlying fund investment managers to improve at the underlying fund level. For example, Manager may engage on disclosure if a certain metric is materially misaligned with that of the chosen proxy and/or peers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments which the Fund makes in the underlying funds and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are assessed in the following ways;

1. Via PAI monitoring of the following indicators;

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

2. Through engagement with the underlying fund investment managers to ensure that the sustainable investments that the underlying funds makes are:

    a. Made in investee companies that demonstrate good governance:

    b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

    c. Made in investee companies that make a positive contribution towards an environmental or social objective.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

☒ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the Fund portfolio against mandatory and additional PAI indicators. Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report. The PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

☐ No

What investment strategy does this financial product follow?

The Fund is structured as a Fund giving a return to investors at the Maturity Date. The Fund is organised in a manner that it has two separate investment objectives for different time periods in the Fund's life, as set out below. Please refer to the supplement to the Prospectus titled "FAM Sustainable Target 2023 IV" (the "Supplement") for definitions of "Maturity Date" and "Subscription Period".

1. During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund. The Manager will seek to achieve this objective by investing principally, either directly, or indirectly via units of underlying funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

2. Following the Subscription Period, the investment objective of the Fund is to achieve long-term capital appreciation. The Fund seeks to achieve this objective in the following manner, as further set out in the Supplement:

- By reducing the Fund's allocation to Initial Strategies on a monthly basis ("Averaging Out").
- Every month the Fund will complete the Averaging Out process and the exposure to the Initial Strategies will be reduced and an exposure will be obtained to underlying funds as described in detail in the Supplement (the "Longer Term Strategies").

As part of the Longer Term Strategies, the Fund may invest up to 100% of the Fund's assets in underlying funds that provide exposure to equities issued by companies incorporated anywhere in the world, and which take account of a number of ESG factors.

Although the Fund does not have a specific sustainable investment objective, the Fund will pursue an investment strategy that seeks to identify the best investment opportunities by integrating financial analysis with environmental, social responsibility and governance considerations. In order to meet such extra-financial characteristics, the target funds or the assets held directly by the Fund are assessed as related to sustainable and social criteria and where applicable, they must have an explicit commitment to responsible investing as per their investment process.

The ESG rating of each instrument held by the Fund should be reflected in an assessment, and ultimately in the decision on whether to invest in such instrument. The Fund will invest, directly or indirectly through open-ended UCIs and UCITS, in instruments that have better social or environmental ratings and/or are issued by issuers with better social or environmental practices. For example as stated above, the Fund currently intends to invest a minimum of 90% in other funds classified as either Article 8 and/or Article 9 under SFDR, which means, that at a minimum, the majority of the underlying funds which the Fund holds promote environmental and social characterisictics while investing in companies which follow good governance practices.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The Manager also maintains due diligence processes to assess the ESG commitments of underlying investments and underlying fund managers. To this end, the Manager, reviews and assesses on a periodic basis private and public information related to each issuer and/or relevant underlying fund manager, as applicable, and its ESG rating or characteristics. In addition to such assessment, the Manager will obtain from each issuer (and/or the relevant underlying fund manager, as the case may be), which has been selected for investment by the Fund, any information necessary to assess the ESG rating or characteristics of the relevant underlying investment.

For any direct investment (i.e. non-underying fund investments), companies that are in breach of UN Global Compact principles (along with certain other Exclusion criteris) are excluded from the investment universe of the Fund as defined by the Manager. Where an investment is deemed inappropriate, no further investment may be made in the instrument, however existing holdings may be retained for a period of time to facilitate

orderly divestment. For investment in underlying funds, exclusions of the underying fund manager are assessed as part of the initial and ongoing due diligence process.

For any direct investment (i.e. non-underying fund investments), the Manager recognises and adheres to the principle of responsible stewardship via sustainable proxy voting and collective enagement initiatives as a way of promoting good ESG policies.

The elements of the investment strategy to attain of the environmental or social characteristics promoted by this financial product as described above are systematically integrated throughout the investment process

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

a. **Minimum investment in funds falling within the meaning of Article 8 and Article 9 of the SFDR**
The Fund will invest a minimum of 90% in other funds classified as falling within the meaning of either Article 8 and/or Article 9 under the SFDR.

b. **Minimum underlying fund score**
80% of the Fund's underlying fund holdings will be rated A by MSCI ESG Manager (or an other corresponding rating from a similar rating provider). If the Sustainable Finance Committee of the Manager determines that the underlying fund in question has mitigating reasons for its MSCI ESG score to have fallen below A, the underlying fund holding may be maintained within the Fund portfolio.

c. **Exclusion Policy**
For any direct holdings (i.e. non-underying fund investments), the Manager's Exclusion Policy applies, and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein.

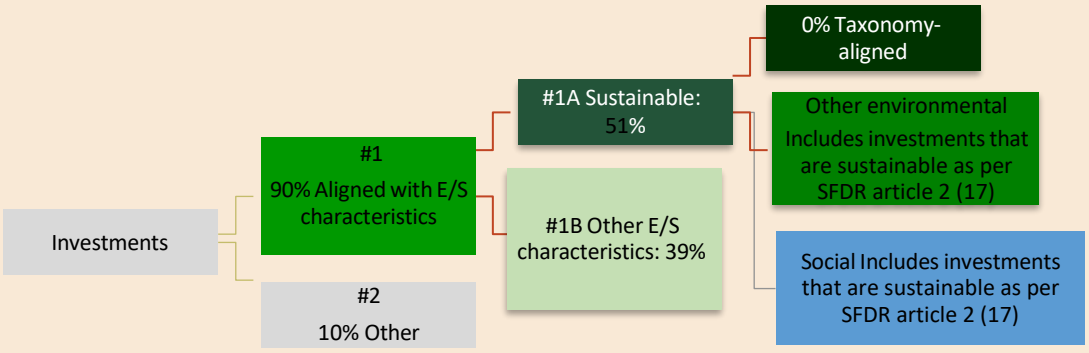
What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

Not applicable

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

Good governance is assessed for underlying funds through engagement with the underlying fund manager via due diligence.



In addition, ensuring that a minimum of 90% of the portfolio is invested in funds falling within the meaning of Article 8 or Article 9 of the SFDR, demonstrates that the Manager is limiting the Fund's investment universe of underlying funds to focus on those investment funds that must only invest in investee companies that demonstrate good governance practices (in compliance with SFDR).

In addition, direct holdings (i.e. non-underlying fund investments) in the Fund must have a minimum rating of BB according to MSCI ESG Manager (or an other corresponding rating

from a similar rating provider). This ensures a level of good governance vis a vis the above scores. Limited exceptions to this rule may apply.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments means the products Net Asset Value which is the total market value of the product.

At least 90% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund. The Financial product also comments to a minimum proportion of 51% in sustainable investments. The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

The asset allocation may change over time and percentages may be updated in this appendix from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate underlying fund manager data and/or company or third-party data.

- ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**

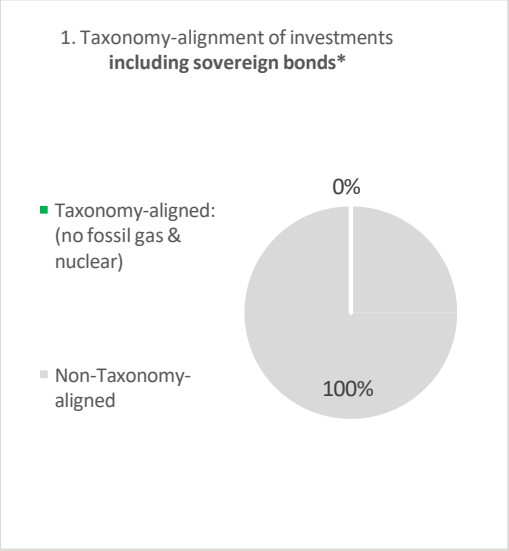
Derivatives are not used to attain the environmental or social characteristics promoted by this Fund.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

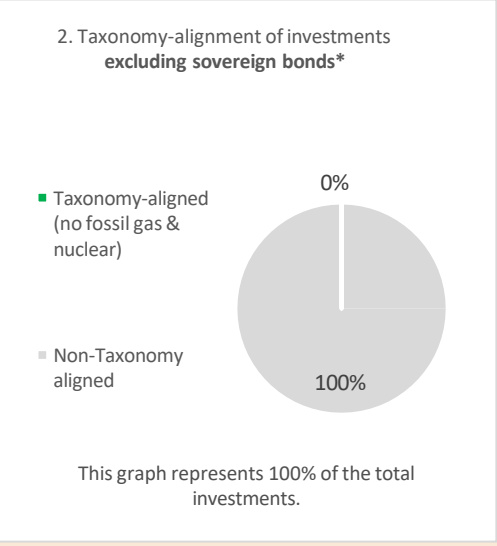
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities are** activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy1?



Yes:

In fossil gas In nuclear energy

No: X

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

What is the minimum share of investments in transitional and enabling activities? 0%.

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

51%*.

What is the minimum share of socially sustainable investments?

51%*.

*The Fund commits to invest at least 51% of its assets in sustainable investments. Within this overall commitment, there is no prioritisation of environmental and/or social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the Manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the Managers Exclusion Policy.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Responsible Investment Policy, summary investment process and Exclusion Policy can be found on the Manager's website at the following link FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)

FAM SUSTAINABLE TARGET 2023 V

SUPPLEMENT DATED 21 MAY 2025

This Supplement contains specific information in relation to **FAM Sustainable Target 2023 V** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

This Fund may invest principally in units of Underlying Funds in such proportions as the Manager deems appropriate from time to time. Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. An investment in the Fund involves certain investment risks, including the possible loss of principal. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Target Date	10 November 2023
Subscription Period	means the 60 calendar days following the end of Initial Offer Period or such longer or shorter period, as may be determined by the Directors in accordance with the requirements of the Central Bank.

Investment Objective and Policies

The Fund is being structured as a Fund giving a return to investors over the long term. The Fund is organised in a manner that it has two separate investment objectives for different time periods in the Fund's life as follows, and as explained in detail in each sub-section below:

1. **During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund; and**
2. **Following the Subscription Period, the investment objective of the Fund is to achieve long-term capital appreciation**.

As stated above, the main investment objective of the Fund is as set out in (2) above and in the section headed "*After the Subscription Period, up to and after the Target Date*". The reason for having a Subscription Period is to have a short 60 day time period during which the Fund will accept subscriptions and invest them in a manner designed to seek to achieve a positive investment return whilst maintaining liquidity for the Fund. After the Subscription Period subscriptions into the Fund are no longer accepted. Although the Fund will be closed for subscriptions after the Subscription Period, requests for redemptions received prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day (i.e. each Business Day) in accordance with the section of the Prospectus entitled **"**Redemption of Shares".

During the Subscription Period

During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund. The Manager will seek to achieve this objective by investing principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

Investment in the Initial Strategies will be selected on the basis that will result in the Fund having a weighted average interest rate duration of no longer than 2 years.

Selection of debt instruments

The debt instruments that may be part of the Initial Strategies will selected based on the Manager's top-down analysis, which includes a view on the global investment outlook and analysis of market opportunities and securities based on an assessment of factors such as income yield, credit risk and bond duration. The Manager's will assess each individual bond and the bond markets to understand the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the bonds under assessment. Following such credit assessment, the Manager appraises a potential investment in a bond in terms of relative value when compared to other bonds that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which bonds to acquire on behalf of the Fund. When an investment in a bond is made, it will be closely monitored by the Manager taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such bond will be kept under review by the Manager. The Manager may invest substantially or fully in government bonds issued by any Member State.

After the Subscription Period, up to and after the Target Date

Following the Subscription Period, the investment objective of the Fund is to achieve long-term capital appreciation.

The Fund seeks to achieve this objective in the following manner:

1. By reducing the Fund's allocation to Initial Strategies on a monthly basis ("Averaging Out").

   For example, it is anticipated that following the last day of the Subscription Period and on a monthly basis the Fund's asset allocation to Initial Strategies will reduce on average by 4.54% of the Fund's assets.

   The Manager, based on their discretion, can alter the above monthly amount by accelerating the reduction to the Initial Strategies according to their view of market conditions. The Manager's view on market conditions will be informed by a proprietary quantitative model designed by the Manager which is described below (the "Quant Model"). Each monthly reduction will be followed by a corresponding investment by the Fund into the Longer Term Strategies (described at point 2 below). This Averaging Out will continue every month up to the Target Date.

   The Manager will run the Quant Model in order to analyse market conditions which will inform them as to how much they should accelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies.

   This proprietary Quant Model allows the Manager assess market conditions using quantifiable, definitive and numerical data that can be used for checking portfolio return robustness via historical simulations; i.e. it is analysis on documented and definitive information on the past performance of the relevant market. The Quant Model will be based on technical and market indicators such as the relative strength index which analyses the historical strength or weakness of a stock or market based on closing prices of a recent trading period. The analysis produced by the Quant Model allows the Manager take advantage of favourable market conditions when assessing whether or not to increase the Averaging Out amount above 4.54% a month. Favourable market conditions in this context mean conditions that, once the Manager has run the Quant Model and assessed the resulting data and market indicators arising from the running of the Quant Model, indicate to the Manager that it is favourable for the Manager to accelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies at a favourable price.

   The Averaging Out process will occur every month, following the last day of the Subscription Period, for approximately 22 months up to the Target Date. At the Target Date, the Fund will be fully invested in the Longer Term Strategies. The gradual exposure of Shareholders to the Longer Term Strategies allows Shareholders obtain a diversified exposure to the market while neutralizing the effect of short-term price fluctuations in the broader market. In addition, the Quant Model allows the Manager the discretion to take advantage of favourable market conditions (described above) in respect of potentially accelerating Shareholders exposure to the Longer Term Strategies.

2. As described above, every month the Fund will complete the Averaging Out process and the exposure to the Initial Strategies will be reduced and an exposure will be obtained to Underlying Funds as described in detail immediately below (the "Longer Term Strategies"). As part of the Longer Term Strategies the Fund:

   I. may invest principally in Underlying Funds that provide exposure to equities issued by

companies incorporated anywhere in the world, and which take account of any one or all of the following considerations, environmental, social responsibility and governance ("ESG"), as described below,

ESG considerations concern the selection of securities which provide exposure to organisations which hold the highest standards of sustainability, ethics and/or corporate governance.

The environmental element of ESG may look at how an organisation performs as a steward of the natural environment. The social element of ESG may examine how an organisation manages relationships with its employees, service providers and the community at large. The governance element of ESG may consider how an organisation's leadership, executive pay, audits and internal controls work whilst also understanding how shareholders are given the appropriate voting rights.

As responsible investing is the main focus of the Fund, the Manager will, in addition to the criteria outlined in the section entitled "Selection of Underlying Funds", seek to identify Underlying Funds managed by investment managers which have a commitment to responsible investing and which take account of the ESG criteria as described above. The Manager may do this by analysing if the relevant fund manager of the Underlying Fund is:

- A signatory to the United Nations supported Principles for Responsible Investment organisation or similar body which encourages a responsible approach to investing;
- Incorporating the assessment of ESG factors such as waste and pollution, working conditions and board diversity and structure as a key part of their investment process in identifying and evaluating a potential purchase or disposal of an investment;
- Employing a dedicated ESG analyst or team in respect of the implementation of their ESG strategy; and
- Actively engaging with companies in which they are invested and using their shareholder voting rights to promote ESG standards in these companies.

In the selection of the Underlying Funds the Manager will also assess whether or not the Underlying Fund has a sustainability rating or score provided by a recognised data service provider; and

II. may invest up to 20% of its Net Asset Value in units of Underlying Funds managed with absolute return investment strategies. These strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. These strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements;

III. may invest up to 20% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate.

At any time, the Fund may only have a maximum exposure of 30%, either directly or through Underlying Funds, to non-Investment Grade debt securities.

Selection of Underlying Funds

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which make up the Initial Strategies and the Longer Term Strategies.
The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in instruments that make up the Initial Strategies and Longer Term Strategies, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the

investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Fund also being managed by the Manager.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested "alternative investment funds" ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.[1]

[1] The Fund currently follows a fund of funds investment approach and can invest principally in UCITS or other investment funds that are eligible for investment by a UCITS as set out in the Prospectus and this Supplement. The Manager therefore relies on data provided by the investment managers of the Underlying Fund investments when calculating the minimum percentage proportion of sustainable investment of the Fund and when calculating the percentages required in the section of Annex II dealing with the planned asset allocation of the Fund.

SFDR Disclosures

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk and the Paris Aligned Benchmark Exclusions (the "**PAB Exclusions**").

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in

order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund
as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the MSCI World Net Total Return Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not

take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	14 October 2021 – 09 November 2021	Euro	No	Up to 2%	€1,000 / €100	Accumulating
Class D Acc	€100	14 October 2021 – 09 November 2021	Euro	No	No	€500 / €100	Accumulating

During the Initial Offer Period, Shares are available for subscription at the Initial Offer Price, as indicated directly above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to the following management fee of the Net Asset Value of each Class of Shares:

Management Fee (% of NAV) of each Share Class	
During the Subscription Period	Up to 0.20%
After the Subscription Period up to the end of year 1	Up to 1.5%
After the end of year 1 up to the end of year 2	Up to 2.5%
After the end of year 2	Up to 2.5%

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first two years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Sales Charge

Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding, in which case, in order to avoid double charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, investors should take the following risk factors into account: "General Risks", "Investment Risk", "Liquidity Risk", "Redemption Risk", "Credit Risk", "Currency Risk", "Share Currency Designation Risk", "Risks Affect Specific Issuers", "Derivatives Risk", "Investing in Fixed Income Securities", "Below Investment Grade Credit Risk", "Changes in Interest Rates", "Investment in Exchange Traded Funds (ETFs)" and "Additional Risks Applicable to Underlying Funds". Nevertheless, such list is not deemed to be exhaustive and therefore investors are recommended to familiarise themselves with all risk factors described in the above-mentioned section of the Prospectus.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FAM SUSTAINABLE TARGET 2023 V
Legal entity identifier: 25490092ISIZFBQZGN84

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☑ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective: ___%**	☑ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 51% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☑ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☑ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective: ___%**	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The environmental and/or social characteristics of this product include:

a. **Minimum investment in funds falling within the meaning of Article 8 and 9 of the SFDR**
The Fund will invest a minimum of 90% in underlying funds classified as falling within the meaning of either Article 8 and/or Article 9 under SFDR, which means, that at a minimum, the majority of the underlying funds which the Fund holds promote

environmental and social characteristics while investing in companies which follow good governance practices.

b. Positive Screening

Consideration of environmental, social and governance ("ESG factors") are a key element of portfolio construction/fund selection. Portfolio managers will take a holistic approach which includes the analysis of ESG factors as part of their overall risk adjusted valuation assessment. This supports the overall promotion of investment in funds which the Manager deems desirable on ESG grounds. By incorporating positive ESG factors as part of the overall portfolio construction/fund selection, the Fund through its investments supports a tilt towards investment in underlying funds that have a more positive impact on the environment or society at large.

c. Fund Level ESG Scoring

A monthly independent analysis and classification of the Fund's ESG score is performed internally by the Manager. A minimum ESG scoring threshold is applied at Fund level to ensure that the Fund's ESG score does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control serves to highlight a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers on ESG topics.

d. Negative Screening (Norm-based exclusions)

For any potential direct holdings the Manager applies its basic exclusions (the "**Basic Exclusions**") as well as the PAB Exclusions in accordance with its Exclusion Policy. The Manager wants its funds under management to avoid making any investments which the Manager or its clients might deem incompatible with minimum responsible investing principles. To align the Fund's investments with this sustainable investment approach, Manager have adopted a firm wide exclusion policy which screens all investments for their compliance with minimum international standards and norms, from which an Exclusion List is derived..

Those exclusions currently include:

a. Issuers that breach the principles of the United Nations Global Compact;
b. Issuers involved in the manufacture or product life cycle of controversial weapons including biological and chemical weapons, cluster munitions and sub-munitions, depleted uranium, landmines including antipersonnel mine and nuclear weapons);
c. Issuers involved in the cultivation and production of tobacco
d. Issuers that derive 1% or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;
e. Issuers that derive 10% or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;
f. Issuers that derive 50% or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;
g. Issuers that derive 50% or more of their revenues from electricity generation with a GHF intensity of more than 100g C02 e/kWh
h. Issuers that contravene the United Nations Global Company labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards

The Management Company also assesses whether or not the Underlying Fund manager applies any basic exclusion policy and the PAB Exclusions.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted.

- ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Fund uses the following indicator;

i. The percentage of the Fund portfolio made in sustainable investments;

ii. the percentage of the Fund's underlying fund holdings rated A by MSCI ESG Manager (or an other corresponding rating from a similar rating provider).

- ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments that the Fund intends to make is to promote environmental and/or social characteristics. On the basis that the Fund is currently following a fund of funds investment approach, the objectives of the sustainable investments that the Fund partially intends to make is linked to the sustainable investments made by the underlying funds. The Fund will seek to make investments in underlying funds that commit/partially commit to invest in sustainable investments and who have a process for ensuring that their sustainable investments are:

a. Made in investee companies that demonstrate good governance;

b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

c. Made in investee companies that make a positive contribution towards an environmental or social objective. The Fund may allocate between underlying funds which make sustainable investments of any type, i.e. investments with an environmental, and/or a social objective. The Fund is not required to favour any specific type of sustainable investment.

- ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective based on the policies adopted by the relevant underlying fund investment managers. These policies are considered as part of the Manager's initial and ongoing investment due diligence procedures and are assessed for alignment with the indicators set out in Table 1 and any relevant additional indicator from Tables 2 and 3 of Annex I of the Delegated Regulation and the approach taken by the Manager.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Principal adverse impact ("PAI") indicators are calculated at both the Fund level and the underlying fund level. The results will be compared with that of a chosen proxy benchmark representative of the Fund's investment universe and/or peers. These calculations will be used as the basis of assessment of adverse impacts on sustainability factors in order to determine whether the Manager can improve at Fund level and/or where Manager can engage with underlying fund investment managers to improve at the underlying fund level. For example, Manager may engage on disclosure if a certain metric is materially misaligned with that of the chosen proxy and/or peers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments which the Fund makes in the underlying funds and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are assessed in the following ways;

1. Via PAI monitoring of the following indicators;

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

2. Through engagement with the underlying fund investment managers to ensure that the sustainable investments that the underlying funds makes are:

    a. Made in investee companies that demonstrate good governance:

    b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

    c. Made in investee companies that make a positive contribution towards an environmental or social objective.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

☒ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the Fund portfolio against mandatory and additional PAI indicators. Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report. The PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

☐ No

What investment strategy does this financial product follow?

The Fund is structured as a Fund giving a return to investors at the Maturity Date. The Fund is organised in a manner that it has two separate investment objectives for different time periods in the Fund's life, as set out below. Please refer to the supplement to the

Prospectus titled “FAM Sustainable Target 2023 V” (the “Supplement”) for definitions of “Maturity Date” and “Subscription Period”.

1. During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund. The Manager will seek to achieve this objective by investing principally, either directly, or indirectly via units of underlying funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the “Initial Strategies”).

2. Following the Subscription Period the investment objective of the Fund is to achieve medium to long-term capital appreciation. The Fund seeks to achieve this objective in the following manner:

- By reducing the Fund’s allocation to Initial Strategies on a monthly basis (“Averaging Out”).

- Every month the Fund will complete the Averaging Out process and the exposure to the Initial Strategies will be reduced and an exposure will be obtained to underlying funds as described in detail in the Supplement (the “Longer Term Strategies”).

As part of the Longer Term Strategies, the Fund The Fund may invest up to 100% of the Fund’s assets in underlying funds that provide exposure to equities issued by companies incorporated anywhere in the world, and which take account of a number of ESG factors.

Although the Fund does not have a specific sustainable investment objective, the Fund will pursue an investment strategy that seeks to identify the best investment opportunities by integrating financial analysis with environmental, social responsibility and governance considerations. In order to meet such extra-financial characteristics, the target funds or the assets held directly by the Fund are assessed as related to sustainable and social criteria and where applicable, they must have an explicit commitment to responsible investing as per their investment process.

The ESG rating of each instrument held by the Fund should be reflected in an assessment, and ultimately in the decision on whether to invest in such instrument. The Fund will invest, directly or indirectly through open-ended UCIs and UCITS, in instruments that have better social or environmental ratings and/or are issued by issuers with better social or environmental practices. For example as stated above, the Fund currently intends to invest a minimum of 90% in other funds classified as either Article 8 and/or Article 9 under SFDR, which means, that at a minimum, the majority of the underlying funds which the Fund holds promote environmental and social characterisictics while investing in companies which follow good governance practices.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The Manager also maintains due diligence processes to assess the ESG commitments of underlying investments and underlying fund managers. To this end, the Manager, reviews and assesses on a periodic basis private and public information related to each issuer and/or relevant underlying fund manager, as applicable, and its ESG rating or characteristics. In addition to such assessment, the Manager will obtain from each issuer (and/or the relevant underlying fund manager, as the case may be), which has been selected for investment by the Fund, any information necessary to assess the ESG rating or characteristics of the relevant underlying investment.

For any direct investment (i.e. non-underying fund investments), companies that are in breach of UN Global Compact principles (along with certain other Exclusion criteris) are

excluded from the investment universe of the Fund as defined by the Manager. Where an investment is deemed inappropriate, no further investment may be made in the instrument, however existing holdings may be retained for a period of time to facilitate orderly divestment. For investment in underlying funds, exclusions of the underying fund manager are assessed as part of the initial and ongoing due diligence process.

For any direct investment (i.e. non-underying fund investments), the Manager recognises and adheres to the principle of responsible stewardship via sustainable proxy voting and collective enagement initiatives as a way of promoting good ESG policies.

The elements of the investment strategy to attain of the environmental or social characteristics promoted by this financial product as described above are systematically integrated throughout the investment process

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

a. Minimum investment in funds falling within the meaning of Article 8 and Article 9 of the SFDR

The Fund will invest a minimum of 90% in other funds classified as falling within the meaning of either Article 8 and/or Article 9 under the SFDR.

b. Minimum underlying fund score

80% of the Fund's underlying fund holdings will be rated A by MSCI ESG Manager (or an other corresponding rating from a similar rating provider). If the Sustainable Finance Committee of the Manager determines that the underlying fund in question has mitigating reasons for its MSCI ESG score to have fallen below A, the underlying fund holding may be maintained within the Fund portfolio.

c. Exclusion Policy

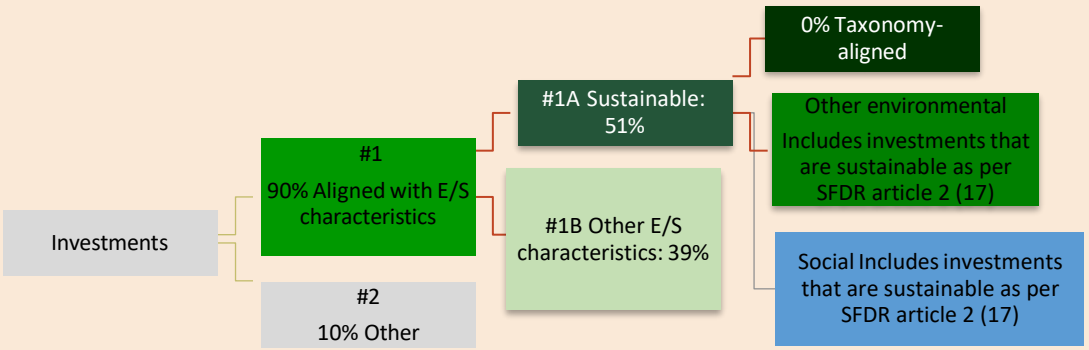
For any direct holdings (i.e. non-underying fund investments), the Manager's Exclusion Policy applies, and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

Not applicable

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

- ***What is the policy to assess good governance practices of the investee companies?***



Good governance is assessed for underlying funds through engagement with the underlying fund manager via due diligence.

In addition, ensuring that a minimum of 90% of the portfolio is invested in funds falling within the meaning of Article 8 or Article 9 of the SFDR, demonstrates that the Manager is limiting the Fund's investment universe of underlying funds to focus on those investment funds that must only invest in investee companies that demonstrate good governance practices (in compliance with SFDR).

In addition, direct holdings (i.e. non-underlying fund investments) in the Fund must have a minimum rating of BB according to MSCI ESG Manager (or an other corresponding rating from a similar rating provider). This ensures a level of good governance vis a vis the above scores. Limited exceptions to this rule may apply.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments means the products Net Asset Value which is the total market value of the product.

At least 90% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund. The Financial product also comments to a minimum proportion of 51% in sustainable investments. The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

The asset allocation may change over time and percentages may be updated in this appendix from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate underlying fund manager data and/or company or third-party data.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

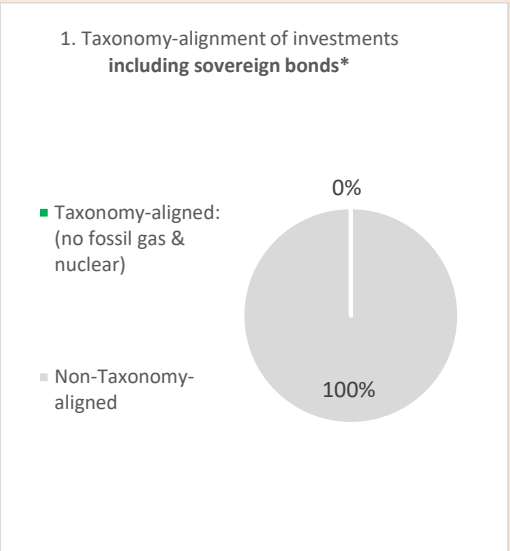
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities are** activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the best performance.

***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**

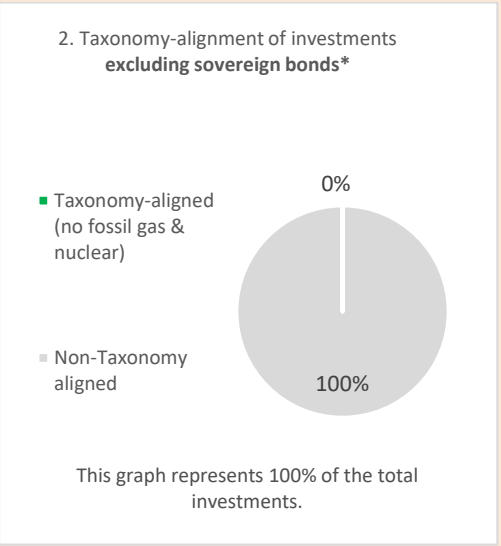
Derivatives are not used to attain the environmental or social characteristics promoted by this Fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy1?



Yes:

In fossil gas In nuclear energy

No: X

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities? 0%.

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

51%*.

What is the minimum share of socially sustainable investments?

51%*.

*The Fund commits to invest at least 51% of its assets in sustainable investments. Within this overall commitment, there is no prioritisation of environmental and/or social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the Manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the Managers Exclusion Policy.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Responsible Investment Policy, summary investment process and Exclusion Policy can be found on the Manager's website at the following link: FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)

FAM MEGATRENDS TARGET XI

SUPPLEMENT DATED 30 JUNE 2025

This Supplement contains specific information in relation to **FAM MegaTrends Target XI** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset- management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of the ICAV dated 1 December 2022 and each addendum thereto (together the "Prospectus").

The Fund may invest principally in units of Underlying Funds in such proportions as the Manager deems appropriate from time to time. Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. An investment in the Fund involves certain investment risks, including the possible loss of principal. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Subscription Period	The original Subscription Period closed in 2022 (the **Original Subscription Period**). The subsequent Subscription Period means the 60 calendar days from 1 July 2025 to 1 September 2025 or such longer or shorter period, as may be determined by the Directors and on a quarterly basis thereafter at the discretion of the Directors and once notified in advance to Shareholders. Shares will be available for subscription during this time, at the prevailing Net Asset Value (NAV) per Share.

Investment Objective and Policies

The investment objective of the Fund is to achieve long-term capital appreciation.

The Fund:

I. may invest principally in Underlying Funds that provide exposure to equities issued by companies operating in sectors and geographical regions that benefit from ongoing global megatrends.

Global megatrends ("Megatrends") are generally defined as global forces of development that create fundamental shifts in the progress of society thus impacting business, the economy, culture and the way we live. Examples of Megatrends that are currently reshaping our world are: demographic and social changes, climate change and resource scarcity, technological breakthroughs and rapid urbanization. Megatrends evolve independently of the economic cycle and, thus, possess the capacity to continuously redraw the financial landscape. By underpinning these Megatrends, it is possible to identify investment sub-themes which act as both drivers and beneficiaries of these Megatrends.

A summary of some of the sub-themes of the abovementioned Megatrends prevalent in the world today are listed below. Potential Shareholders should be aware that the below listed headings are examples of certain sub-themes of Megatrends and are for illustrative

purposes only. It is important for potential Shareholders to note that what constitutes a Megatrend sub-theme today may not be classed as such in the future. This is not intended to be an exhaustive list and these sub-themes have the ability to change over time. Therefore, the Fund does not commit to definitively invest in each or all of these Megatrend sub-themes at any time:

- Ageing Population: The ageing of the world's population is widely considered one of the most enduring demographic shifts in human history. Companies which have a focus on improving developments in healthcare, developments in Biotechnology and shifting consumer trends leading to a longer life expectancy are in a position to benefit greatly from this trend;
- Oncology: With cancer diagnoses expected to increase in the next 20 years, companies which are committing capital to cancer research to develop better diagnostics to cure cancer are in a position to benefit from developments in the treatment of cancer;
- Water: Population growth, urbanization and water-intensive dietary changes are adding to rising industrial water demand. Companies at the forefront of new technologies required to accommodate increasing global demand for water are well placed to benefit from this trend;
- Electric & Autonomous Vehicles: With a shift away from internal combustion engine vehicles and movement toward the broad usage of autonomous vehicles, manufacturers of both electric and autonomous vehicles as well as their components and other companies in the supply chain all stand to be beneficiaries from this trend; and
- Drones: Extensive growth in consumer and commercial drone usage means that companies involved in the production of these technologies will benefit from this evolving trend.

II. may invest up to 20% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate;

III. may invest up to 20% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and

At any time, the Fund may only have a maximum exposure of 30%, either directly or through Underlying Funds, to non-Investment Grade debt securities.

Selection of Underlying Funds

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability

of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds being managed by the Manager.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on the Recognised Markets.

Underlying Funds
The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in alternative investment funds ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.[1]

SFDR Disclosures

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of the SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities/basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the

Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the

Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the

underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled “Securities Financing Transactions”.

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund’s net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed “Collateral Policy”.

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund’s portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund’s portfolio is calculated daily and is measured relative to the MSCI World Net Total Return Index (the “Index”), an index which the Manager considers is a comparable benchmark to the Fund’s portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund’s portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund’s Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class	Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type

Class L Acc	€100	Closed	Euro	No	Up to 2%	€1,000 / €100	Accumulating
Class D Acc	€100	Closed	Euro	No	No	€500 / €100	Accumulating

During the Initial Offer Period, Shares are available for subscription at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to the following management fee of the Net Asset Value of each Class of Shares:

Management Fee (% of NAV) for each Share Class	
During the Subscription Period	Up to 0.20%
After the Subscription Period up to the end of year 1	Up to 1.50%
After the end of year 1 up to the end of year 2	Up to 2.50%
After the end of year 2	Up to 2.50%

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding, in which case, in order to avoid double charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first two years of the Fund's operation (or such other period as may be determined by the Directors at their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, investors should take the following risk factors into account: "General Risks", "Investment Risk", "Liquidity Risk", "Redemption Risk", "Credit Risk", "Currency Risk", "Share Currency Designation Risk", "Risks Affect Specific Issuers", "Derivatives Risk", "Investing in Fixed Income Securities", "Below Investment Grade Credit Risk", "Changes in Interest Rates", "Investment in Exchange Traded Funds (ETFs)" and "Additional Risks Applicable to Underlying Funds". Nevertheless, such list is not deemed to be exhaustive and therefore investors are recommended to familiarise themselves with all risk factors described in the above-mentioned section of the Prospectus.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FAM MEGATRENDS TARGET XI
Legal entity identifier: 2549006VK0Z329RDEP81

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The environmental and/or social characteristics of this product include:

a. **Minimum investment in funds in scope of Article 8 and 9 of the SFDR**
The Fund will invest a minimum of 90% in Underlying Funds which fall within the meaning of either Article 8 or Article 9 of the SFDR, which means, that at a minimum, the majority of the Underlying Funds which the Fund holds promote environmental and social characteristics while investing in companies which follow good governance practices.

b. Positive Screening

Consideration of ESG factors are a key element of portfolio construction/fund selection. Portfolio managers will take a holistic approach which includes the analysis of ESG factors as part of their overall risk adjusted valuation assessment. This supports the overall promotion of investment in funds which the Manager deems desirable on ESG grounds. By incorporating positive ESG factors as part of the overall portfolio construction/fund selection, the Fund through its investments supports a tilt towards investment in Underlying Funds that have a more positive impact on the environment or society at large.

c. Fund Level ESG Scoring

A monthly independent analysis and classification of the Fund's ESG score is performed internally by the Manager. A minimum ESG scoring threshold is applied at Fund Level to ensure that the Fund's ESG score does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control serves to highlight a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers on ESG topics.

d. Negative Screening (Norm-based exclusions)

For any potential direct holdings the Manager applies norms-based exclusions based on its Exclusion Policy. The Manager wants its funds under management to avoid making any investments which the Manager or its clients might deem incompatible with minimum responsible investing principles. To align the Fund's investments with this sustainable investment approach, Manager have adopted a firm wide exclusion policy which screens all investments for their compliance with minimum international standards and norms, from which an Exclusion List is derived..

Exclusion categories considered in the Exclusion Policy are:

- United Nations Global Compact Principles
- Controversial Weapons
- Tobacco
- Climate Change
- Forced Labour

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Fund uses the following indicator;

i. The percentage of the Fund portfolio made in sustainable investments;

ii. the percentage of the Fund's Underlying Fund holdings rated A or above by MSCI ESG Manager (or another corresponding rating from a similar rating provider).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments that the Fund intends to make is to promote environmental and/or social characteristics. On the basis that the Fund is currently following

a fund of funds investment approach, the objectives of the sustainable investments that the Fund partially intends to make is linked to the sustainable investments made by the Underlying Funds. The Fund will seek to make investments in Underlying Funds that commit/partially commit to invest in sustainable investments and who have a process for ensuring that their sustainable investments are:

a. Made in investee companies that demonstrate good governance;

b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

c. Made in investee companies that make a positive contribution towards an environmental or social objective. The Fund may allocate between Underlying Funds which make sustainable investments of any type, i.e. investments with an environmental, and/or a social objective. The Fund is not required to favour any specific type of sustainable investment.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective based on the policies adopted by the relevant Underlying Fund investment managers. These policies are considered as part of the Manager's initial and ongoing investment due diligence procedures and are assessed for alignment with the indicators set out in Table 1 and any relevant additional indicator from Tables 2 and 3 of Annex I of the Delegated Regulation.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Principal adverse impact ("PAI") indicators are calculated at both the Fund level and the Underlying Fund level. The results will be compared with that of a chosen proxy benchmark representative of the Fund's investment universe and/or peers. These calculations will be used as the basis of assessment of adverse impacts on sustainability factors in order to determine whether the Manager can improve at Fund level and/or where Manager can engage with Underlying Fund investment managers to improve at the Underlying Fund level. For example, Manager may engage on disclosure if a certain metric is materially misaligned with that of the chosen proxy and/or peers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments which the Fund makes in the Underlying Funds and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are assessed in the following ways;

1. Via PAI monitoring of the following indicators;

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

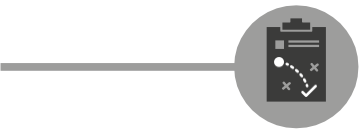
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

2. Through engagement with the Underlying Fund investment managers to ensure that the sustainable investments that the Underlying Funds makes are:

a. Made in investee companies that demonstrate good governance:

b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

c. Made in investee companies that make a positive contribution towards an environmental or social objective.



The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☑ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the Fund portfolio against mandatory and additional PAI indicators. Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report. The PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

☐ No

What investment strategy does this financial product follow?

The investment objective of the Fund is to achieve long-term capital appreciation. The

Fund may invest principally in Underlying Funds that provide exposure to equities issued by companies operating in sectors and geographical regions that benefit from ongoing global megatrends, as further described in the Supplement.

Although the Fund does not have a specific sustainable investment objective, the Manager has fully integrated the ESG Policy into the overall investment process, in particular, the portfolio construction process.

As part of the process to undertake appropriate due diligence on investments, the Manager will generally conduct a level of research on each Underlying Fund which will give the Investment Manager an understanding of the investments underpinning same. This includes a quantitative and qualitative assessment as detailed in the "Investment Objective and Policies" section of the Supplement which involves scrutiny relating to each

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Underlying Fund's approach to ESG factors and consideration of Sustainability Risks.

The Manager integrates these ESG factors and this Sustainability Risk assessment into its investment research process and its risk management process – both initially and on an ongoing basis for the duration of the period the Fund holds an investment or pursues a particular investment strategy.

For investment in Underlying Funds, exclusions of the Underying Fund manager are assessed as part of the initial and ongoing due diligence process.

For any direct investment (i.e. non-underying fund investments), companies that are in breach of UN Global Compact principles (along with certain other Exclusion criteris) are excluded from the investment universe of the Fund as defined by the Manager. Where an investment is deemed inappropriate, no further investment may be made in the instrument, however existing holdings may be retained for a period of time to facilitate orderly divestment. For investment in underlying funds, exclusions of the underying fund manager are assessed as part of the initial and ongoing due diligence process.

For any direct investment (i.e. non-underying fund investments), the Manager recognises and adheres to the principle of responsible stewardship via sustainable proxy voting and collective enagement initiatives as a way of promoting good ESG policies.

The elements of the investment strategy to attain of the environmental or social characteristics promoted by this financial product as described above are systematically integrated throughout the investment process

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

a. Minimum investment in funds in scope of Article 8 and Article 9 SFDR

The Fund will invest a minimum of 90% in other funds which fall within the meaning of either Article 8 and/or Article 9 of the SFDR.

b. Minimum Underlying Fund score

80% of the Fund's Underlying Fund holdings will be rated A by MSCI ESG Manager (or an other corresponding rating from a similar rating provider). If the Sustainable Finance Committee of the Manager determines that the Underlying Fund in question has mitigating reasons for its MSCI ESG score to have fallen below A, the Underlying Fund holding may be maintained within the Fund portfolio.

c. Exclusion Policy

For any direct holdings (i.e. non-underying fund investments), the Manager's Exclusion Policy applies, and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

Not applicable

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

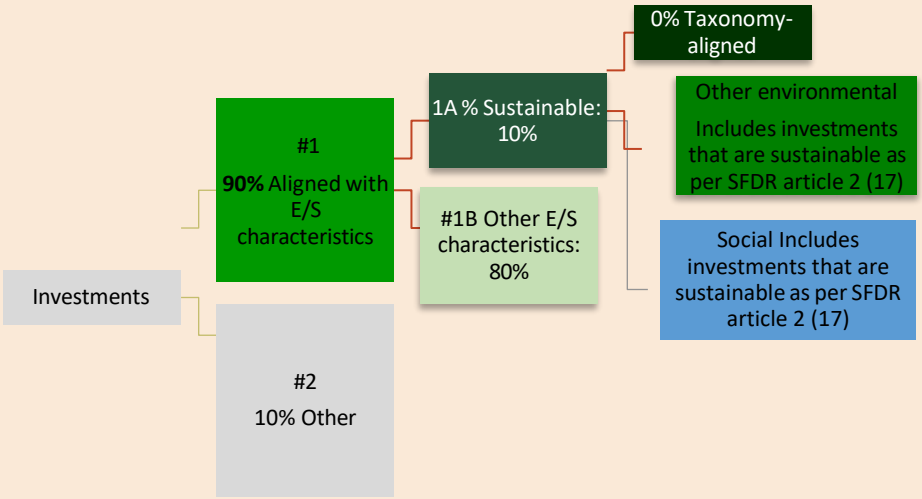
- ***What is the policy to assess good governance practices of the investee companies?***

Good governance is assessed for Underlying Funds through engagement with the Underlying Fund manager via due diligence.

In addition, ensuring that a minimum of 90% of the portfolio is invested in funds which fall within the meaning of Article 8 or 9 of the SFDR, demonstrates that the Manager is limiting the Fund's investment universe of Underlying Funds to focus on those investment funds that must only invest in investee companies that demonstrate good governance practices (in compliance with SFDR).

What is the asset allocation planned for this financial product?

*Investments means the Fund's Net Asset Value which is the total market value of the product.



Asset allocation describes the share of investments in

Taxonomy-aligned activities are expressed as a

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU

by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

At least 80% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund. The Financial product also comments to a minimum proportion of 10% in sustainable investments. The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

The asset allocation may change over time and percentages may be updated in this appendix from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate underlying fund manager data and/or company or third-party data.

***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**

Derivatives are not used to attain the environmental or social characteristics promoted by this Fund.

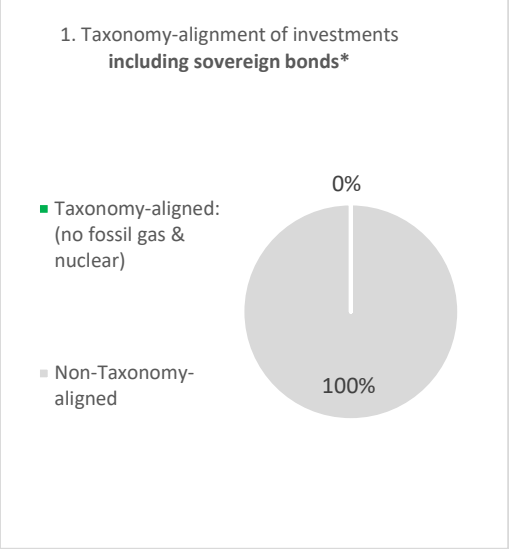
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It

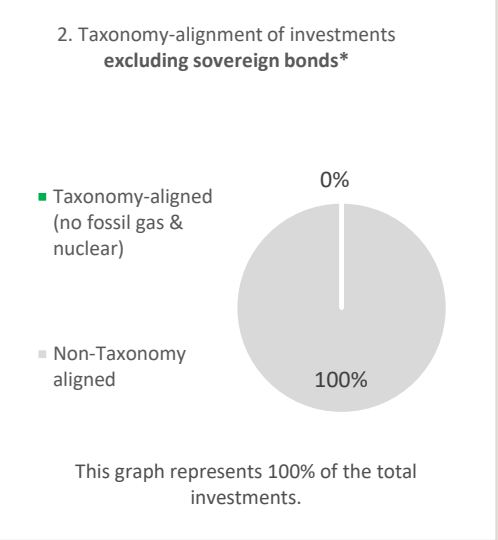
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities are** activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the best performance.

follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[1]?



Yes:

In fossil gas In nuclear energy

No: X

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

What is the minimum share of investments in transitional and enabling activities? 0%.

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

10%*.

What is the minimum share of socially sustainable investments?

10%*

*The Fund commits to invest at least 10% of its assets in sustainable investments. Within this

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

overall commitment, there is no prioritisation of environmental and/or social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the Manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the managers exclusion policy.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Fund, including the Responsible Investment Policy and Exclusion Policy can be found on the Manager's website at the following link FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)

FAM EMERGING MARKETS TARGET II

SUPPLEMENT DATED 30 JUNE 2025

This Supplement contains specific information in relation to **FAM Emerging Markets Target II** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of the ICAV dated 01 DECEMBER 2022 and each Addendum thereto (together the "Prospectus").

The Fund may invest principally in units of Underlying Funds in such proportions as the Manager deems appropriate from time to time. Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. An investment in the Fund involves certain investment risks, including the possible loss of principal. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Subscription Period	The original Subscription Period closed in 2022 (the **Original Subscription Period**). The subsequent Subscription Period means the 60 calendar days from 1 July 2025 to 1 September 2025 or such longer or shorter period, as may be determined by the Directors and on a quarterly basis thereafter at the discretion of the Directors and once notified in advance to Shareholders. Shares will be available for subscription during this time, at the prevailing Net Asset Value (NAV) per Share.

Investment Objective and Policies

The investment objective of the Fund is to achieve long-term capital appreciation.

The Fund:

(1) may invest up to 100% of its assets in units of Underlying Funds that provide exposure to equities and equity-linked instruments (i.e. American depositary receipts and global depositary receipts) issued by issuers in emerging markets. Emerging markets refer to countries that are considered by the Manager to be countries that are characterised as emerging by the World Bank, the United Nations, the International Finance Corporation, the European Bank for Reconstruction and Development, or are included in an emerging markets index by a recognised index provider. Whilst the Fund may invest in Underlying Funds made up of investments that have an exposure to China and India; the Fund will not itself invest in those jurisdictions. Up to 10% of the assets of the Fund may be invested in equities issued by companies incorporated anywhere in the world or in Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world. The Fund's exposure to Russia via investment in the Underlying Funds shall be limited to 20% of the assets of the Fund. The Fund will not directly invest in securities listed or traded in Russia.;

(2) may invest up to 20% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are

not necessarily dependent upon continuous rising markets), hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and

(3) may invest up to 20% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

At any time, the Fund may only have a maximum exposure of 30%, either directly or through Underlying Funds, to non-Investment Grade debt securities.

Selection of Underlying Funds

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers, as follows:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Fund also being managed by the Manager.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in alternative investment funds ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required

to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR..

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the MSCI Emerging Markets Daily Net Total Return (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	Closed	Euro	No	Up to 2%	€1,000 / €100	Accumulating
Class D Acc	€100	Closed	Euro	No	No	€500 / €100	Accumulating

During the Initial Offer Period, Shares are available for subscription at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to the following management fee of the Net Asset Value of each Class of Shares.

Management Fee (% of NAV) for each Share Class	
During the Original Subscription Period	Up to 0.20%
After the Original Subscription Period up to the end of year 1	Up to 1.50%
After the end of year 1 up to the end of year 2	Up to 1.50%
After the end of year 2	Up to 1.50%

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding, in which case, in order to avoid double charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000, will be borne by the Fund and amortised over the first two years of the Fund's operation (or such other period as may be determined by the Directors at their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

FINECO AM SUSTAINABLE TARGET 2024

SUPPLEMENT DATED 21 MAY 2025

This Supplement contains specific information in relation to **Fineco AM Sustainable Target 2024** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub- funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

This Fund may invest principally in units of Underlying Funds in such proportions as the Manager deems appropriate from time to time. Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. An investment in the Fund involves certain investment risks, including the possible loss of principal. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Target Date	03 March 2024
Subscription Period	means the 60 calendar days following the end of Initial Offer Period or such longer or shorter period, as may be determined by the Directors in accordance with the requirements of the Central Bank.

Investment Objective and Policies

The Fund is being structured as a Fund giving a return to investors over the long term. The Fund is organised in a manner that it has two separate investment objectives for different time periods in the Fund's life as follows, and as explained in detail in each sub-section below:

1. **During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund; and**

2. **Following the Subscription Period, the investment objective of the Fund is to achieve long-term capital appreciation.**

As stated above, the main investment objective of the Fund is as set out in (2) above and in the section headed "*After the Subscription Period, up to and after the Target Date*". The reason for having a Subscription Period is to have a short 60 day time period during which the Fund will accept subscriptions and invest them in a manner designed to seek to achieve a positive investment return whilst maintaining liquidity for the Fund. After the Subscription Period subscriptions into the Fund are no longer accepted. Although the Fund will be closed for subscriptions after the Subscription Period, requests for redemptions received prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day (i.e. each Business Day) in accordance with the section of the Prospectus entitled "Redemption of Shares".

During the Subscription Period

During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund. The Manager will seek to achieve this objective by investing principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero- coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

Investment in the Initial Strategies will be selected on the basis that will result in the Fund having a weighted average interest rate duration of no longer than 2 years.

Selection of debt instruments

The debt instruments that may be part of the Initial Strategies will selected based on the Manager's top-down analysis, which includes a view on the global investment outlook and analysis of market opportunities and securities based on an assessment of factors such as income yield, credit risk and bond duration. The Manager's will assess each individual bond and the bond markets to understand the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the bonds under assessment. Following such credit assessment, the Manager appraises a potential investment in a bond in terms of relative value when compared to other bonds that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which bonds to acquire on behalf of the Fund. When an investment in a bond is made, it will be closely monitored by the Manager taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such bond will be kept under review by the Manager. The Manager may invest substantially or fully in government bonds issued by any Member State.

After the Subscription Period, up to and after the Target Date

Following the Subscription Period, the investment objective of the Fund is to achieve long-term capital appreciation.

The Fund seeks to achieve this objective in the following manner:

1. By reducing the Fund's allocation to Initial Strategies on a monthly basis ("Averaging Out").

   For example, it is anticipated that following the last day of the Subscription Period and on a monthly basis the Fund's asset allocation to Initial Strategies will reduce on average by 4.54% of the Fund's assets.

   The Manager, based on their discretion, can alter the above monthly amount by accelerating the reduction to the Initial Strategies according to their view of market conditions. The Manager's view on market conditions will be informed by a proprietary quantitative model designed by the Manager which is described below (the "Quant Model"). Each monthly reduction will be followed by a corresponding investment by the Fund into the Longer Term Strategies (described at point 2 below). This Averaging Out will continue every month up to the Target Date.

   The Manager will run the Quant Model in order to analyse market conditions which will inform them as to how much they should accelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies.

This proprietary Quant Model allows the Manager assess market conditions using quantifiable, definitive and numerical data that can be used for checking portfolio return robustness via historical simulations; i.e. it is analysis on documented and definitive information on the past performance of the relevant market. The Quant Model will be based on technical and market indicators such as the relative strength index which analyses the historical strength or weakness of a stock or market based on closing prices of a recent trading period. The analysis produced by the Quant Model allows the Manager take advantage of favourable market conditions when assessing whether or not to increase the Averaging Out amount above 4.54% a month. Favourable market conditions in this context mean conditions that, once the Manager has run the Quant Model and assessed the resulting data and market indicators arising from the running of the Quant Model, indicate to the Manager that it is favourable for the Manager to accelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies at a favourable price.

The Averaging Out process will occur every month, following the last day of the Subscription Period, for approximately 22 months up to the Target Date. At the Target Date, the Fund will be fully invested in the Longer Term Strategies. The gradual exposure of Shareholders to the Longer Term Strategies allows Shareholders obtain a diversified exposure to the market while neutralizing the effect of short- term price fluctuations in the broader market. In addition, the Quant Model allows the Manager the discretion to take advantage of favourable market conditions (described above) in respect of potentially accelerating Shareholders exposure to the Longer Term Strategies.

2. As described above, every month the Fund will complete the Averaging Out process and the exposure to the Initial Strategies will be reduced and an exposure will be obtained to Underlying Funds as described in detail immediately below (the "Longer Term Strategies"). As part of the Longer Term Strategies the Fund:

    I. may invest principally in Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world that take account of any one or all of the following considerations, environmental, social responsibility and governance ("ESG"), as described below.

    ESG considerations concern the selection of securities which provide exposure to organisations which hold the highest standards of sustainability, ethics and/or corporate governance.

    The environmental element of ESG may look at how an organisation performs as a steward of the natural environment. The social element of ESG may examine how an organisation manages relationships with its employees, service providers and the community at large. The governance element of ESG may consider how an organisation's leadership, executive pay, audits and internal controls work whilst also understanding how shareholders are given the appropriate voting rights.

    As responsible investing is the main focus of the Fund, the Manager will, in addition to the criteria outlined in the section entitled "Selection of Underlying Funds", seek to identify Underlying Funds managed by investment managers which have a commitment to responsible investing and which take account of the ESG criteria as described above. The Manager may do this by analysing if the relevant fund manager of the Underlying Fund is:

- A signatory to the United Nations supported Principles for Responsible Investment organisation or similar body which encourages a responsible approach to investing;
- Incorporating the assessment of ESG factors such as waste and pollution, working conditions and board diversity and structure as a key part of their investment process in identifying and evaluating a potential purchase or disposal of an investment;
- Employing a dedicated ESG analyst or team in respect of the implementation of their ESG strategy; and
- Actively engaging with companies in which they are invested and using their shareholder voting rights to promote ESG standards in these companies.

In the selection of the Underlying Funds the Manager will also assess whether or not the Underlying Fund has a sustainability rating or score provided by a recognised data service provider; and

II. may invest up to 20% of its Net Asset Value in units of Underlying Funds managed with absolute return investment strategies. These strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. These strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements;

III. may invest up to 20% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non- Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate.

At any time, the Fund may only have a maximum exposure of 30%, either directly or through Underlying Funds, to non-Investment Grade debt securities.

Selection of Underlying Funds

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which make up the Initial Strategies and the Longer Term Strategies.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in instruments that make up the Initial Strategies and Longer Term Strategies, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return)

associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and
- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Fund also being managed by the Manager.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested "alternative investment funds" ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and invest in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.[1]
.

SFDR Disclosures

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk) and the Paris Aligned Exclusions ("**PAB Exclusions**").

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial- related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

[1] The Fund currently follows a fund of funds investment approach and can invest principally in UCITS or other investment funds that are eligible for investment by a UCITS as set out in the Prospectus and this Supplement. The Manager therefore relies on data provided by the investment managers of the Underlying Fund investments when calculating the minimum percentage proportion of sustainable investment of the Fund and when calculating the percentages required in the section of Annex II dealing with the planned asset allocation of the Fund.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or

protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall. The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.
Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset

Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the MSCI World Net Total Return Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	**Initial Offer Price**	**Initial Offer Period**	**Currency Denomination**	**and Hedged Class**	**Sales Charge**	**Minimum Initial Subscription and Minimum Subsequent Subscription**	**Distribution Type**
Class L Acc	€100	From 18 February 2022 to 04 March2022	Euro	No	Up to 2%	€1,000 / €100	Accumulating
Class D Acc	€100	From 18 February 2022 to 04 March 2022	Euro	No	No	€500 / €100	Accumulating

During the Initial Offer Period, Shares are available for subscription at the Initial Offer Price, as indicated directly above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading

"Fees and Expenses".

Manager's Fee

The Manager shall be entitled to the following management fee of the Net Asset Value of each Class of Shares:

Management Fee (% of NAV) of each Share Class	
During the Subscription Period	Up to 0.20%
After the Subscription Period up to the end of year 1	Up to 1.5%
After the end of year 1 up to the end of year 2	Up to 2.5%

After the end of year 2	Up to 2.5%

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first two years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Sales Charge

Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding, in which case, in order to avoid double charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long- term.

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, investors should take the following risk factors into account: "General Risks", "Investment Risk", "Liquidity Risk", "Redemption Risk", "Credit Risk", "Currency Risk", "Share Currency Designation Risk", "Risks Affect Specific Issuers", "Derivatives Risk", "Investing in Fixed Income Securities", "Below Investment Grade Credit Risk", "Changes in Interest Rates", "Investment in Exchange Traded Funds (ETFs)" and "Additional Risks Applicable to Underlying Funds". Nevertheless, such list is not deemed to be exhaustive and therefore investors are recommended to familiarise themselves with all risk factors described in the above-mentioned section of the Prospectus.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product name: FINECO AM SUSTAINABLE TARGET 2024
Legal entity identifier: 25490069N47V587BIK70

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective: ___%**	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 51% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective: ___%**	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The environmental and/or social characteristics of this product include:

a. **Minimum investment in funds falling within the meaning of Article 8 and 9 of the SFDR**

The Fund will invest a minimum of 90% in underlying funds classified as falling within the meaning of either Article 8 and/or Article 9 under SFDR, which means, that at a minimum, the majority of the underlying funds which the Fund holds promote

environmental and social characteristics while investing in companies which follow good governance practices.

b. Positive Screening

Consideration of environmental, social and governance ("ESG factors") are a key element of portfolio construction/fund selection. Portfolio managers will take a holistic approach which includes the analysis of ESG factors as part of their overall risk adjusted valuation assessment. This supports the overall promotion of investment in funds which the Manager deems desirable on ESG grounds. By incorporating positive ESG factors as part of the overall portfolio construction/fund selection, the Fund through its investments supports a tilt towards investment in underlying funds that have a more positive impact on the environment or society at large.

c. Fund Level ESG Scoring

A monthly independent analysis and classification of the Fund's ESG score is performed internally by the Manager. A minimum ESG scoring threshold is applied at Fund level to ensure that the Fund's ESG score does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control serves to highlight a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers on ESG topics.

d. Negative Screening (Norm-based exclusions)

For any potential direct holdings the Manager applies its basic exclusions (the "**Basic Exclusions**") as well as the PAB Exclusions in accordance with its Exclusion Policy. The Manager wants its funds under management to avoid making any investments which the Manager or its clients might deem incompatible with minimum responsible investing principles. To align the Fund's investments with this sustainable investment approach, Manager have adopted a firm wide exclusion policy which screens all investments for their compliance with minimum international standards and norms, from which an Exclusion List is derived..

Those exclusions currently include:

a. Issuers that breach the principles of the United Nations Global Compact;
b. Issuers involved in the manufacture or product life cycle of controversial weapons including biological and chemical weapons, cluster munitions and sub-munitions, depleted uranium, landmines including antipersonnel mine and nuclear weapons);
c. Issuers involved in the cultivation and production of tobacco
d. Issuers that derive 1% or more of their revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite;
e. Issuers that derive 10% or more of their revenues from the exploration, extraction, distribution or refining of oil fuels;
f. Issuers that derive 50% or more of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels;
g. Issuers that derive 50% or more of their revenues from electricity generation with a GHF intensity of more than 100g C02 e/kWh
h. Issuers that contravene the United Nations Global Company labour-related principles and International Labour Organisation's ("ILO") broader set of labour standards

The Management Company also assesses whether or not the Underlying Fund manager applies any Basic Exclusion Policy and the PAB Exclusions.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted.

- ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Fund uses the following indicator;

i. The percentage of the Fund portfolio made in sustainable investments;

ii. the percentage of the Fund's underlying fund holdings rated A by MSCI ESG Manager (or an other corresponding rating from a similar rating provider).

- ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments that the Fund intends to make is to promote environmental and/or social characteristics. On the basis that the Fund is currently following a fund of funds investment approach, the objectives of the sustainable investments that the Fund partially intends to make is linked to the sustainable investments made by the underlying funds. The Fund will seek to make investments in underlying funds that commit/partially commit to invest in sustainable investments and who have a process for ensuring that their sustainable investments are:

a. Made in investee companies that demonstrate good governance;

b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

c. Made in investee companies that make a positive contribution towards an environmental or social objective. The Fund may allocate between underlying funds which make sustainable investments of any type, i.e. investments with an environmental, and/or a social objective. The Fund is not required to favour any specific type of sustainable investment.

- ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective based on the policies adopted by the relevant underlying fund investment managers. These policies are considered as part of the Manager's initial and ongoing investment due diligence procedures and are assessed for alignment with the indicators set out in Table 1 and any relevant additional indicator from Tables 2 and 3 of Annex I of the Delegated Regulation and the approach taken by the Manager.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Principal adverse impact ("PAI") indicators are calculated at both the Fund level and the underlying fund level. The results will be compared with that of a chosen proxy benchmark representative of the Fund's investment universe and/or peers. These calculations will be used as the basis of assessment of adverse impacts on sustainability factors in order to determine whether the Manager can improve at Fund level and/or where Manager can engage with underlying fund investment managers to improve at the underlying fund level. For example, Manager may engage on disclosure if a certain metric is materially misaligned with that of the chosen proxy and/or peers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments which the Fund makes in the underlying funds and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are assessed in the following ways;

1. Via PAI monitoring of the following indicators;

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

2. Through engagement with the underlying fund investment managers to ensure that the sustainable investments that the underlying funds makes are:

    a. Made in investee companies that demonstrate good governance:

    b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

    c. Made in investee companies that make a positive contribution towards an environmental or social objective.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the Fund portfolio against mandatory and additional PAI indicators. Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report. The PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

☐ No

What investment strategy does this financial product follow?

The Fund is structured as a Fund giving a return to investors at the Maturity Date. The Fund is organised in a manner that it has two separate investment objectives for different time periods in the Fund's life, as set out below. Please refer to the supplement to the Prospectus titled 'Fineco AM Sustainable Target 2024 (the "Supplement") for definitions of "Maturity Date" and "Subscription Period".

1. During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund. The Manager will seek to achieve this objective by investing principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

2. Following the Subscription Period the investment objective of the Fund is to achieve medium to long-term capital appreciation. The Fund seeks to achieve this objective in the following manner, as set out further in the Supplement:

    - By reducing the Fund's allocation to Initial Strategies on a monthly basis ("Averaging Out").

    - Every month the Fund will complete the Averaging Out process and the exposure to the Initial Strategies will be reduced and an exposure will be obtained to Underlying Funds as described in detail in the Supplement (the "Longer Term Strategies").

As part of the Longer Term Strategies, the Fund may invest principally in underlying funds that provide exposure to equities issued by companies incorporated anywhere in the world, and which take account of a number of ESG factors.

Although the Fund does not have a specific sustainable investment objective, the Fund will pursue an investment strategy that seeks to identify the best investment opportunities by integrating financial analysis with environmental, social responsibility and governance considerations. In order to meet such extra-financial characteristics, the target funds or the assets held directly by the Fund are assessed as related to sustainable and social criteria and where applicable, they must have an explicit commitment to responsible investing as per their investment process.

The ESG rating of each instrument held by the Fund should be reflected in an assessment, and ultimately in the decision on whether to invest in such instrument. The Fund will invest, directly or indirectly through open-ended UCIs and UCITS, in instruments that have better social or environmental ratings and/or are issued by issuers with better social or environmental practices. For example as stated above, the Fund currently intends to invest a minimum of 90% in other funds classified as either Article 8 and/or Article 9 under SFDR, which means, that at a minimum, the majority of the underlying funds which the Fund holds promote environmental and social characterisictics while investing in companies which follow good governance practices.

The Manager also maintains due diligence processes to assess the ESG commitments of underlying investments and underlying fund managers. To this end, the Manager, reviews and assesses on a periodic basis private and public information related to each issuer and/or relevant underlying fund manager, as applicable, and its ESG rating or characteristics. In addition to such assessment, the Manager will obtain from each issuer (and/or the relevant underlying fund manager, as the case may be), which has been

selected for investment by the Fund, any information necessary to assess the ESG rating or characteristics of the relevant underlying investment.

For any direct investment (i.e. non-underying fund investments), companies that are in breach of UN Global Compact principles (along with certain other Exclusion criteris) are excluded from the investment universe of the Fund as defined by the Manager. Where an investment is deemed inappropriate, no further investment may be made in the instrument, however existing holdings may be retained for a period of time to facilitate orderly divestment. For investment in underlying funds, exclusions of the underying fund manager are assessed as part of the initial and ongoing due diligence process.

For any direct investment (i.e. non-underying fund investments), the Manager recognises and adheres to the principle of responsible stewardship via sustainable proxy voting and collective enagement initiatives as a way of promoting good ESG policies.

The elements of the investment strategy to attain of the environmental or social characteristics promoted by this financial product as described above are systematically integrated throughout the investment process

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

  a. **Minimum investment in funds falling within the meaning of Article 8 and Article 9 of the SFDR**
  The Fund will invest a minimum of 90% in other funds classified as falling within the meaning of either Article 8 and/or Article 9 under the SFDR.

  b. **Minimum underlying fund score**
  80% of the Fund's underlying fund holdings will be rated A by MSCI ESG Manager (or an other corresponding rating from a similar rating provider). If the Sustainable Finance Committee of the Manager determines that the underlying fund in question has mitigating reasons for its MSCI ESG score to have fallen below A, the underlying fund holding may be maintained within the Fund portfolio.

  c. **Exclusion Policy**
  For any direct holdings (i.e. non-underying fund investments), the Manager's Exclusion Policy applies, and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

  Not applicable

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

- ***What is the policy to assess good governance practices of the investee companies?***

  Good governance is assessed for underlying funds through engagement with the underlying fund manager via due diligence.

  In addition, ensuring that a minimum of 90% of the portfolio is invested in funds falling within the meaning of Article 8 or Article 9 of the SFDR, demonstrates that the Manager is limiting the Fund's investment universe of underlying funds to focus on those investment

funds that must only invest in investee companies that demonstrate good governance practices (in compliance with SFDR).

In addition, direct holdings (i.e. non-underlying fund investments) in the Fund must have a minimum rating of BB according to MSCI ESG Manager (or an other corresponding rating from a similar rating provider). This ensures a level of good governance vis a vis the above scores. Limited exceptions to this rule may apply.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

*Investments means the products Net Asset Value which is the total market value of the product.

At least 90% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund. The Financial product also comments to a minimum proportion of 51% in sustainable investments. The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

The asset allocation may change over time and percentages may be updated in this appendix from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate underlying fund manager data and/or company or third-party data.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities are** activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the best performance.

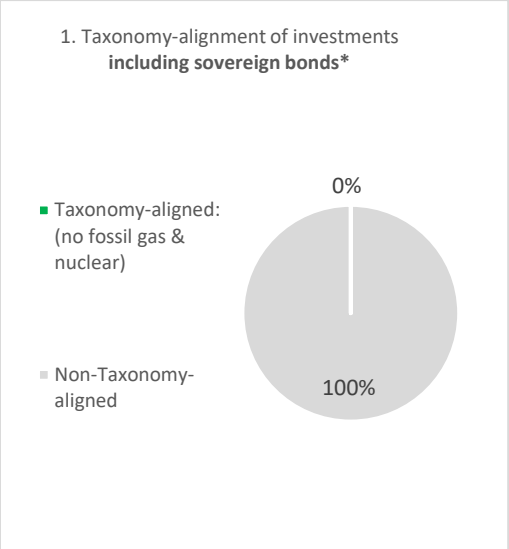
are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**

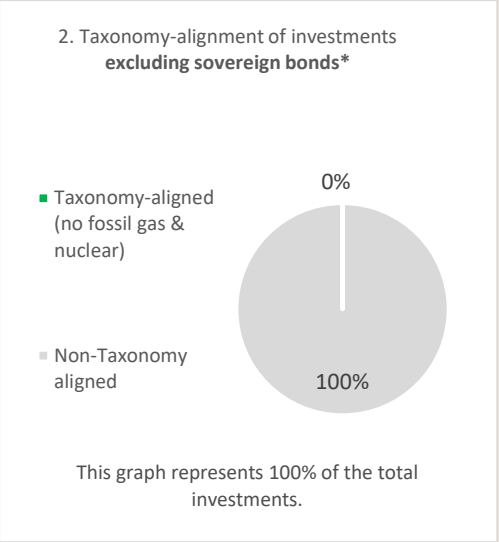
Derivatives are not used to attain the environmental or social characteristics promoted by this Fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy1?



Yes:

In fossil gas In nuclear energy

No: X

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

What is the minimum share of investments in transitional and enabling activities? 0%.

There is no commitment to a minimum proportion of investments in transitional and enabling

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

51%*.

What is the minimum share of socially sustainable investments?

51%*.

*The Fund commits to invest at least 51% of its assets in sustainable investments. Within this overall commitment, there is no prioritisation of environmental and/or social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the Manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the Managers Exclusion Policy.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Responsible Investment Policy, summary investment process and Exclusion Policy can be found on the Manager's website at the following link: FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)

FINECO AM MEGATRENDS TARGET 2027

SUPPLEMENT DATED 7th July 2023

This Supplement contains specific information in relation to **Fineco AM MegaTrends Target 2027** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub- funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. An investment in the Fund involves certain investment risks, including the possible loss of principal. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Target Date 05 March 2027

Subscription Period means the 60 calendar days following the end of the Initial Offer Period or such longer or shorter period, as may be determined by the Directors in accordance with the requirements of the Central Bank.

Investment Objective and Policies

The Fund is being structured as a Fund giving a return to investors at the TargetDate. The Fund is organised in a manner that it has two separate investment objectives for different time periods in the Fund's life as follows, and as explained in detail in each sub-section below:

1. **During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund; and**

2. **Following the Subscription Period, the investment objective of the Fund is to achieve long-term capital appreciation.**

As stated above, the main investment objective of the Fund is as set out in (2) above and in the section headed *"After the Subscription Period and up to the TargetDate*". The reason for having a Subscription Period is to have a short 60 day time period during which the Fund will accept subscriptions and invest them in a manner designed to seek to achieve a positive investment return whilst maintaining liquidity for the Fund. After the Subscription Period, subscriptions into the Fund are no longer accepted. Although the Fund will be closed for subscriptions after the Subscription Period, requests for redemptions received prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day (i.e. each Business Day) in accordance with the section of the Prospectus entitled "Redemption of Shares".

During the Subscription Period

During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund. The Manager will seek to achieve this objective by investing principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

Investment in the Initial Strategies will be selected on the basis that will result in the Fund having a weighted average interest rate duration of no longer than 4.5 years.

Selection of debt instruments

The debt instruments that may be part of the Initial Strategies will selected based on the Manager's top-down analysis, which includes a view on the global investment outlook and analysis of market opportunities and securities based on an assessment of factors such as income yield, credit risk and bond duration. The Manager's will assess each individual bond and the bond markets to understand the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the bonds under assessment. Following such credit assessment, the Manager appraises a potential investment in a bond in terms of relative value when compared to other bonds that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which bonds to acquire on behalf of the Fund. When an investment in a bond is made, it will be closely monitored by the Manager taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such bond will be kept under review by the Manager. The Manager may invest substantially or fully in government bonds issued by any Member State.

After the Subscription Period and up to the TargetDate

Following the Subscription Period, the investment objective of the Fund is to achieve long- term capital appreciation.

The Fund seeks to achieve this objective in the following manner:

1. By reducing the Fund's allocation to Initial Strategies on a monthly basis ("Averaging Out").

   For example, it is anticipated that following the last day of the Subscription Period and on a monthly basis, the Fund's asset allocation to Initial Strategies will reduce on average by 1.72% of the Fund's assets.

   The Manager, based on their discretion, can alter the above monthly amount by accelerating the reduction to the Initial Strategies according to their view of market conditions. The Manager's view on market conditions will be informed by a proprietary quantitative model designed by the Manager which is described below (the "Quant Model"). Each monthly reduction will be followed by a corresponding investment by the Fund in the Longer Term Strategies (described at point 2 below). This Averaging Out will continue every month up to the TargetDate.

   The Manager will run the Quant Model in order to analyse market conditions which will inform them as to how much they should accelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies.

This proprietary Quant Model allows the Manager to assess market conditions using quantifiable, definitive and numerical data that can be used for checking portfolio return robustness via historical simulations; i.e. it is analysis on documented and definitive information on the past performance of the relevant market. The Quant Model will be based on technical and market indicators such as the relative strength index which analyses the historical strength or weakness of a stock or market based on closing prices of a recent trading period. The analysis produced by the Quant Model allows the Manager to take advantage of favourable market conditions when assessing whether or not to increase the Averaging Out amount above 1.72% a month. Favourable market conditions in this context mean conditions that, once the Manager has run the Quant Model and assessed the resulting data and market indicators arising from the running of the Quant Model, indicate to the Manager that it is favourable for the Manager to accelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies at a favourable price.

The Averaging Out process will occur every month, following the last day of the Subscription Period, for approximately 58 months up to the Target Date. At the Target Date the Fund will be fully invested in the Longer Term Strategies. The gradual exposure of Shareholders to the Longer Term Strategies allows Shareholders to obtain a diversified exposure to the market while neutralizing the effect of short-term price fluctuations in the broader market. In addition, the Quant Model gives Manager the discretion to take advantage of favourable market conditions (described above) in respect of potentially accelerating Shareholders exposure to the Longer Term Strategies.

2. As described above, every month the Fund will complete the Averaging Out process and the exposure to the Initial Strategies will be reduced and an exposure will be obtained to Underlying Funds as described in detail immediately below (the "Longer Term Strategies"). As part of the Longer Term Strategies the Fund:

I. may invest principally in Underlying Funds that have a primary focus on providing exposure to equities issued by companies operating in sectors and geographical regions that benefit from ongoing global megatrends.

Global megatrends ("Megatrends") are generally defined as global forces of development that create fundamental shifts in the progress of society thus impacting business, the economy, culture and the way we live. Examples of Megatrends that are reshaping our world currently are demographic and social changes, climate change and resource scarcity, technological breakthroughs and rapid urbanization. Megatrends evolve independently of the economic cycle and thus possess the capacity to continuously redraw the financial landscape. Underpinning these Megatrends, it is possible to identify investment sub-themes which act as both drivers and beneficiaries of these Megatrends.

A summary of some of the sub-themes of the abovementioned Megatrends prevalent in the world today are listed below. Potential Shareholders should be aware that the below headings listed 1-5 are examples of certain sub-themes of Megatrends and are for illustrative purposes only. It is important for potential Shareholders to note that what constitutes a Megatrend sub-theme today may not be classed as such in the future. This is not intended to be an exhaustive list and these sub-themes have the ability to change over time. Therefore, the Fund does not commit to definitively invest in each or all of these Megatrend sub-themes at any time:

- Ageing Population: The ageing of the world's population is widely considered one of the most enduring demographic shifts in human history. Companies

which have a focus on improving developments in healthcare, developments in BioTechnology and shifting consumer trends leading to a longer life expectancy are in a position to benefit greatly from this trend;

- Oncology: With cancer diagnoses expected to increase in the next 20 years, companies which are committing capital to cancer research to develop better diagnostics to cure cancer are in a position to benefit from developments in the treatment of cancer;
- Water: Population growth, urbanization and water-intensive dietary changes are adding to rising industrial water demand. Companies at the forefront of new technologies required to accommodate increasing global demand for water are well placed to benefit from this trend;
- Electric & Autonomous Vehicles: With a shift away from internal combustion engine vehicles and movement toward the broad usage of autonomous vehicles, manufacturers of both electric and autonomous vehicles as well as their components and other companies in the supply chain all stand to be beneficiaries from this trend; and
- Drones: Extensive growth in consumer and commercial drone usage means that companies involved in the production of these technologies will benefit from this evolving trend.

II. may invest up to 20% of its Net Asset Value in units of Underlying Funds managed with absolute return investment strategies. These strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. These strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements; and

III. may invest up to 20% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate.

At any time, the Fund may only have a maximum exposure of 30%, either directly or through Underlying Funds, to non-Investment Grade debt securities.

Selection of Underlying Funds

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which make up the Initial Strategies and the Longer Term Strategies.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in instruments that make up the Initial Strategies and Longer Term Strategies, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times

consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers, as follows:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and
- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Fund also being managed by the Manager.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested "alternative investment funds" ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

SFDR Classification: The Manager has categorised the Fund as meeting the provisions set out in Article 8 of SFDR for products which promote environmental and/or social characteristics and

invest in companies that follow good governance practices, as further described in Annex II at the end of this Supplement.

SFDR Disclosures

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

The Manager has determined that the Fund may have a lower prospect of being impacted by Sustainability Risk given that the Fund falls within the meaning of Article 8 of the SFDR. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to

hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the MSCI World Net Total Return Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net

Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility. The Fund is not designed for investors who need current income.

Base Currency: Euro

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial OfferPrice	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	From 18 February2022 to 04 March2022	Euro	No	Up to 2%	€1,000 / €100	Accumulating
Class D Acc	€100	From 18 February 2022 to 04 March 2022	Euro	No	No	€500 / €100	Accumulating

*Class D Shares in the Fund shall only be made available for subscription to such entities or persons as the Manager may determine from time to time in its absolute discretion.

During the Initial Offer Period, Shares are available for subscription at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to the following management fee of the Net Asset Value of each Class of Shares.

Management Fee (% of NAV) for each Share Class	
During the Subscription Period	Up to 0.20%
After the Subscription Period up to the end of year 1	Up to 1%
After the end of year 1 up to the end of year 2	Up to 1.4%
After the end of year 2 up to the end of year 3	Up to 1.75%
After the end of year 3 up to the end of year 4	Up to 2.10%
After the end of year 4	Up to 2.55%

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding, in which case, in order to avoid double charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long- term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors at their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, investors should take the following risk factors into account: "General Risks", "Investment Risk", "Liquidity Risk", "Redemption Risk", "Credit Risk", "Currency Risk", "Share Currency Designation Risk", "Risks Affect Specific Issuers", "Derivatives Risk", "Investing in Fixed Income Securities", "Below Investment Grade Credit Risk", "Changes in Interest Rates", "Investment in Exchange Traded Funds (ETFs)" and "Additional Risks Applicable to Underlying Funds". Nevertheless, such list is not deemed to be exhaustive and therefore investors are recommended to familiarise themselves with all risk factors described in the above-mentioned section of the Prospectus.

ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: FINECO AM MEGATRENDS TARGET 2027
Legal entity identifier: 254900W5V6EWXXOHME20

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective: ___%**	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 0% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective: ___%**	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The environmental and/or social characteristics of this product include:

a. Minimum investment in funds in scope of Article 8 and 9 of the SFDR

The Fund will invest a minimum of 90% in Underlying Funds which fall within the meaning of either Article 8 or Article 9 of the SFDR, which means, that at a minimum, the majority of the Underlying Funds which the Fund holds promote environmental and social characteristics while investing in companies which follow good governance practices.

b. Positive Screening

Consideration of ESG factors are a key element of portfolio construction/fund selection. Portfolio managers will take a holistic approach which includes the analysis of ESG factors as part of their overall risk adjusted valuation assessment. This supports the overall promotion of investment in funds which the Manager deems desirable on ESG grounds. By incorporating positive ESG factors as part of the overall portfolio construction/fund selection, the Fund through its investments supports a tilt towards investment in Underlying Funds that have a more positive impact on the environment or society at large.

c. Fund Level ESG Scoring

A monthly independent analysis and classification of the Fund's ESG score is performed internally by the Manager. A minimum ESG scoring threshold is applied at Fund Level to ensure that the Fund's ESG score does not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control serves to highlight a minimum Fund level ESG score and promotes engagement and challenge of portfolio managers on ESG topics.

d. Negative Screening (Norm-based exclusions)

For any potential direct holdings the Manager applies norms-based exclusions based on its Exclusion Policy. The Manager wants its funds under management to avoid making any investments which the Manager or its clients might deem incompatible with minimum responsible investing principles. To align the Fund's investments with this sustainable investment approach, Manager have adopted a firm wide exclusion policy which screens all investments for their compliance with minimum international standards and norms, from which an Exclusion List is derived..

Exclusion categories considered in the Exclusion Policy are:

- United Nations Global Compact Principles
- Controversial Weapons
- Tobacco
- Climate Change
- Forced Labour

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Fund uses the following indicator;

i. The percentage of the Fund portfolio made in sustainable investments;

ii. the percentage of the Fund's Underlying Fund holdings rated A or above by MSCI ESG Manager (or another corresponding rating from a similar rating provider).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The objectives of the sustainable investments that the Fund intends to make is to promote environmental and/or social characteristics. On the basis that the Fund is currently following a fund of funds investment approach, the objectives of the sustainable investments that the Fund partially intends to make is linked to the sustainable investments made by the Underlying Funds. The Fund will seek to make investments in Underlying Funds that commit/partially commit to invest in sustainable investments and who have a process for ensuring that their sustainable investments are:

a. Made in investee companies that demonstrate good governance;

b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

c. Made in investee companies that make a positive contribution towards an environmental or social objective. The Fund may allocate between Underlying Funds which make sustainable investments of any type, i.e. investments with an environmental, and/or a social objective. The Fund is not required to favour any specific type of sustainable investment.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective based on the policies adopted by the relevant Underlying Fund investment managers. These policies are considered as part of the Manager's initial and ongoing investment due diligence procedures and are assessed for alignment with the indicators set out in Table 1 and any relevant additional indicator from Tables 2 and 3 of Annex I of the Delegated Regulation.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Principal adverse impact ("PAI") indicators are calculated at both the Fund level and the Underlying Fund level. The results will be compared with that of a chosen proxy benchmark representative of the Fund's investment universe and/or peers. These calculations will be used as the basis of assessment of adverse impacts on sustainability factors in order to determine whether the Manager can improve at Fund level and/or where Manager can engage with Underlying Fund investment managers to improve at the Underlying Fund level. For example, Manager may engage on disclosure if a certain metric is materially misaligned with that of the chosen proxy and/or peers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments which the Fund makes in the Underlying Funds and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are assessed in the following ways;

1. Via PAI monitoring of the following indicators;

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

2. Through engagement with the Underlying Fund investment managers to ensure that the sustainable investments that the Underlying Funds makes are:

    a. Made in investee companies that demonstrate good governance:

    b. Made in a manner that demonstrates that they do no signifcant harm to other environmental objectives; and

    c. Made in investee companies that make a positive contribution towards an environmental or social objective.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

✖ Yes, principal adverse impacts are considered on an ongoing basis by monitoring the Fund portfolio against mandatory and additional PAI indicators. Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report. The PAI indicators that are taken into consideration are subject to data availability and may evolve with improving data quality and availability.

☐ No

What investment strategy does this financial product follow?

The Fund is being structured as a Fund giving a return to investors at the Maturity Date. The Fund is organised in a manner that it has two separate investment objectives for different time periods in the Fund's life, as set out below. Please refer to the supplement to the Prospectus titled "Fineco AM Megatrends Target 2027" (the "Supplement") for definitions of "Maturity Date" and "Subscription Period".

1. During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund. The Manager will seek to achieve this objective by investing principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury

bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the “Initial Strategies”).

2. Following the Subscription Period, the investment objective of the Fund is to achieve long-term capital appreciation. The Fund seeks to achieve this investment objective in the following manner, as further set out in the Supplement:

- By reducing the Fund’s allocation to Initial Strategies on a monthly basis (“Averaging Out”).
- Every month the Fund will complete the Averaging Out process and the exposure to the Initial Strategies will be reduced and an exposure will be obtained to a diversified portfolio of Underlying Funds as described in detail in the Supplement (the “Longer Term Strategies”).

As part of the Longer Term Strategies, the Fund may invest principally in Underlying Funds that have a primary focus on providing exposure to equities issued by companies operating in sectors and geographical regions that benefit from ongoing global megatrends, as further described in the Supplement.

Although the Fund does not have a specific sustainable investment objective, the Manager has fully integrated its ESG Policy into the overall investment process, in particular, the portfolio construction process.

As part of the process to undertake appropriate due diligence on investments, the Manager will generally conduct a level of research on each Underlying Fund which will give the Investment Manager an understanding of the investments underpinning same. This includes a quantitative and qualitative assessment as detailed in the "Investment Objective and Policies" section of the Supplement which involves scrutiny relating to each Underlying Fund's approach to ESG factors and consideration of Sustainability Risks.

The Manager integrates these ESG factors and this Sustainability Risk assessment into its investment research process and its risk management process – both initially and on an ongoing basis for the duration of the period the Fund holds an investment or pursues a particular investment strategy.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

For investment in Underlying Funds, exclusions of the Underying Fund manager are assessed as part of the initial and ongoing due diligence process.

For any direct investment (i.e. non-underying fund investments), companies that are in breach of UN Global Compact principles (along with certain other Exclusion criteris) are excluded from the investment universe of the Fund as defined by the Manager. Where an investment is deemed inappropriate, no further investment may be made in the instrument, however existing holdings may be retained for a period of time to facilitate orderly divestment. For investment in underlying funds, exclusions of the underying fund manager are assessed as part of the initial and ongoing due diligence process.

For any direct investment (i.e. non-underying fund investments), the Manager recognises and adheres to the principle of responsible stewardship via sustainable proxy voting and collective enagement initiatives as a way of promoting good ESG policies.

The elements of the investment strategy to attain of the environmental or social characteristics promoted by this financial product as described above are systematically integrated throughout the investment process

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

a. Minimum investment in funds in scope of Article 8 and Article 9 SFDR
The Fund will invest a minimum of 90% in other funds which fall within the meaning of either Article 8 and/or Article 9 of the SFDR.

b. Minimum Underlying Fund score
80% of the Fund's Underlying Fund holdings will be rated A by MSCI ESG Manager (or an other corresponding rating from a similar rating provider). If the Sustainable Finance Committee of the Manager determines that the Underlying Fund in question has mitigating reasons for its MSCI ESG score to have fallen below A, the Underlying Fund holding may be maintained within the Fund portfolio.

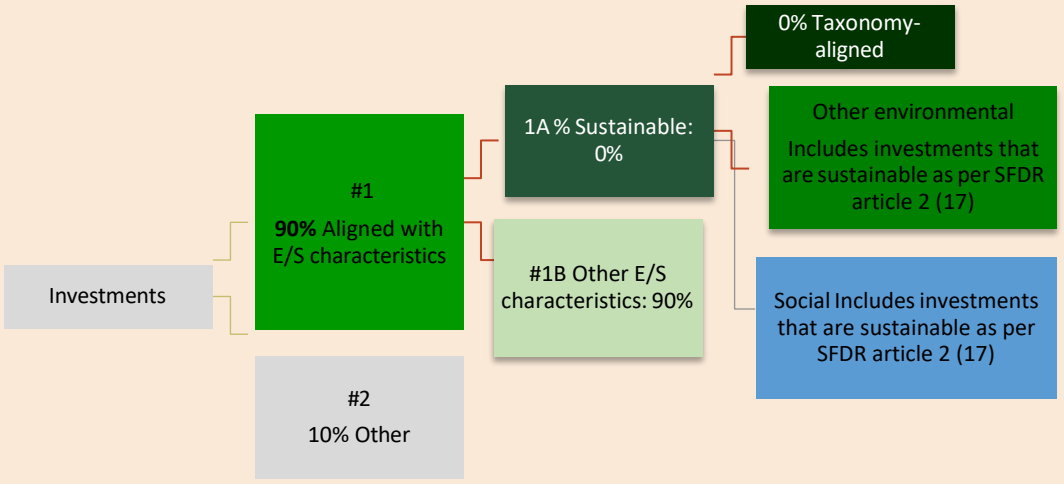
c. Exclusion Policy
For any direct holdings (i.e. non-underying fund investments), the Manager's Exclusion Policy applies, and this reduces the investment universe accordingly to exclude issuers that fail to comply with the minimum standards set out therein.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

Not applicable

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

- ***What is the policy to assess good governance practices of the investee companies?***



Good governance is assessed for Underlying Funds through engagement with the Underlying Fund manager via due diligence.

In addition, ensuring that a minimum of 90% of the portfolio is invested in funds which fall within the meaning of Article 8 or 9 of the SFDR, demonstrates that the Manager is limiting the Fund's investment universe of Underlying Funds to focus on those investment funds that must only invest in investee companies that demonstrate good governance practices (in compliance with SFDR).

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*Investments means the Fund's Net Asset Value which is the total market value of the product.

At least 80% of the Fund's Investments will be aligned with the environmental and/or social characteristics promoted by the Fund. The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

The asset allocation may change over time and percentages may be updated in this appendix from time to time. There is no specific allocation among #1A. Calculations may rely on incomplete or inaccurate underlying fund manager data and/or company or third-party data.

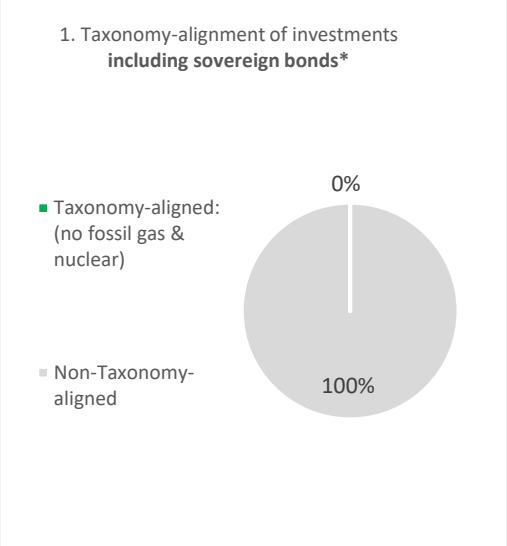
- ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product*?**
  Derivatives are not used to attain the environmental or social characteristics promoted by this Fund.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

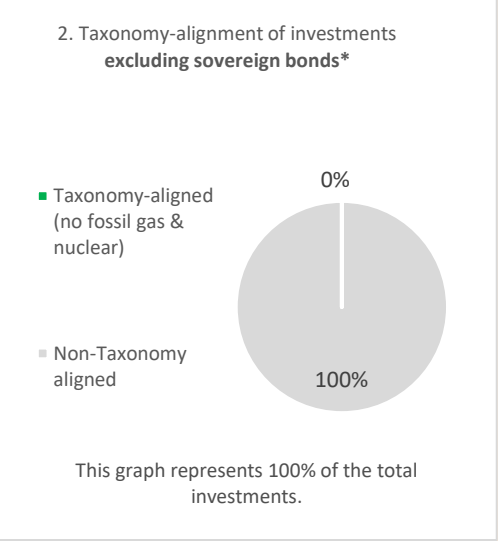
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities are** activities for which low-carbon alternatives are not yet available ad among others have greenhouse gas emission levels corresponding to the best performance.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation is not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy1?



Yes:

In fossil gas In nuclear energy

No: X

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU

What is the minimum share of investments in transitional and enabling activities? 0%.

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

0%*.

What is the minimum share of socially sustainable investments?

0%*

*The Fund commits to invest at least 0% of its assets in sustainable investments. Within this overall commitment, there is no prioritisation of environmental and/or social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the Manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The remaining investments of the Fund may be invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes.

Any "#2 Other" potential investments, other than cash or cash equivalents will be screened according to the managers exclusion policy.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

An index has not been designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

  N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

  N/A

- ***How does the designated index differ from a relevant broad market index?***

  N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

  N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

More product-specific information can be found on the website:

Further details on the Responsible Investment Policy, summary investment process and Exclusion Policy can be found on the Manager's website at the following link FAM - Sustainability | Fineco FAM - Fineco FAM (finecoassetmanagement.com)

FINECO AM PASSIVE UNDERLYINGS 3

SUPPLEMENT DATED 7th July 2023

This Supplement contains specific information in relation to **Fineco AM Passive Underlyings 3** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 01 December 2022 and the addendum thereto (together the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Investment Objective and Policies

The investment objective of the Fund is to achieve medium to long-term capital appreciation.

The Fund seeks to achieve its investment objective by primarily investing its Net Asset Value in units of a diversified portfolio of Underlying Funds. The Fund:

(1) may invest up to 25% of its Net Asset Value in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world;

(2) may invest up to 90% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate and cash, provided that exposure to non-Investment Grade will be limited to maximum 30% of the Net Asset Value of the Fund;

(3) may invest up to 15% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and

(4) may invest up to 80% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances. Temporary fluctuations, outside of the Manager's control, from this range may from time to time occur.

Asset allocation of the Fund will rotate over time depending on prevailing market conditions, i.e. the Manager will adjust the mix of investments, mentioned above, that the Fund holds based on the application of the investment selection analysis described below to the given market that such investments are in at a given point in time. This Fund will not have any particular industry or geographic focus.

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in equity and debt securities' markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest in Underlying Funds which have a low cost such as passive index-tracking funds, for example ETF products, and have a preference to invest in such low cost Underlying Funds.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

The Fund may also invest up to 7.5% of its Net Asset Value in exchange traded commodities ("ETCs") being instruments that give investors indirect exposure to commodities in the form of certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movement of commodities - such as oil, gold and silver or a basket of commodities - and fluctuate in value based on the underlying commodity(ies). ETCs will be used by the Fund to gain indirect exposure to gold only. While such investment is mainly for the purposes of managing risk and protecting the value of the portfolio, it may be used for investment purposes in certain market conditions (e.g. in times of inflation). Exposure could potentially be through ETCs and/or through

the Underlying Funds referred to under (3) above.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in non-UCITS (so-called "alternative investment funds"), therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the

ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the

relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled “Securities Financing Transactions”.

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund’s net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed “Collateral Policy”.

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund’s portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund’s portfolio is calculated daily and is measured relative to a benchmark composed of 75% of Bloomberg Euro Aggregate Index and 25% MSCI World Net Total Return EUR Index (the “Index”), an index which the Manager considers is a comparable benchmark to the Fund’s portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund’s portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund’s Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the medium-to- long term who are willing to accept a medium level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally

sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying

investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to either high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks;

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	**Initial Offer Price**	**Initial Offer Period**	**Currency Denomination and Hedged Class**		**Sales Charge**	**Minimum Initial Subscription and Minimum Subsequent Subscription**	**Distribution Type**
Class L Acc	€100	2 December 2022 – 1 June 2023	Euro	No	Yes/3%	€1,000 / €100	Accumulating

Class A Acc	€100	Closed	Euro	No	No	€1,000 / €100	Accumulating

During the Initial Offer Period Shares are available for subscription at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Definitions

Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of the Fund:

"Dealing Deadline" means 1:30pm (Irish time) on the Business Day prior to the relevant Dealing Day.

"Valuation Point" means 11.59pm (Irish time) on the relevant Dealing Day.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 1.50% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Sales Charge
Up to 3% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

FINECO AM PASSIVE UNDERLYINGS 4

SUPPLEMENT 12 May 2025

This Supplement contains specific information in relation to **Fineco AM Passive Underlyings 4** (the "Fund"), a sub- fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset- management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 01 December 2022 and the addendum thereto (together the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Investment Objective and Policies

The investment objective of the Fund is to achieve medium to long-term capital appreciation.

The Fund seeks to achieve its investment objective by primarily investing its Net Asset Value in units of a diversified portfolio of Underlying Funds. The Fund: (1) may invest up to 35% of its Net Asset Value in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world; (2) may invest up to 85% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate and cash, provided that exposure to non-Investment Grade will be limited to maximum 30% of the Net Asset Value of the Fund; (3) may invest up to 25% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and (4) may invest up to 30% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances. Temporary fluctuations, outside of the Manager's control, from this range may from time to time occur.

Asset allocation of the Fund will rotate over time depending on prevailing market conditions, i.e. the Manager will adjust the mix of investments, mentioned above, that the Fund holds based on the application of the investment selection analysis described below to the given market that such investments are in at a given point in time. This Fund will not have any particular industry or geographic focus.

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in equity and debt securities' markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative

analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest in Underlying Funds which have a low cost such as passive index-tracking funds, for example ETF products, and have a preference to invest in such low cost Underlying Funds.

The Fund may from time to time hold up to 10% of its Net Asset Value in cash on deposit or hold up to 20% of its Net Asset Value in money market instruments such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances; each for investment purposes and in order to meet redemption payments or the payment of expenses, or pending the investment of subscription proceeds in Underlying Funds. Such holdings may result in the Fund not being fully invested in Underlying Funds but shall be in accordance with Schedule II of the Prospectus.

The Fund may also invest up to 7.5% of its Net Asset Value in exchange traded commodities ("ETCs") being instruments that give investors indirect exposure to commodities in the form of certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movement of commodities - such as oil, gold and silver or a basket of commodities - and fluctuate in value based on the underlying commodity(ies). ETCs will be used by the Fund to gain indirect exposure to gold only. While such investment is mainly for the purposes of managing risk and protecting the value of the portfolio, it may be used for investment purposes in certain market conditions (e.g. in times of inflation). Exposure could potentially be through ETCs and/or through the Underlying Funds referred to under (3) above.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in non-UCITS (so-called "alternative investment funds"), therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities /basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest

rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to a benchmark composed of 80% of Bloomberg Euro Aggregate Index and 20% MSCI ACWI Net Total Return EUR Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the medium-to-long term who are willing to accept a medium level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to either high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses

Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks;

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	**Initial Offer Price**	**Initial Offer Period**	**Currency Denomination and Hedged Class**		**Sales Charge**	**Minimum Initial Subscription and Minimum Subsequent Subscription**	**Distribution Type**
Class L Acc	€100	13 May 2025 – 13 November 2025	Euro	No	Yes/ 3%	€1,000 / €100	Accumulating
Class A Acc	€100	Closed	Euro	No	No	€1,000 / €100	Accumulating
*Class C Dist	€100	13 May 2025	Euro	No	No	€100 / €100	Distributing

*Class C Dist Shares in the Fund shall only be made available for subscription to such entities or persons as the Manager may determine from time to time in its absolute discretion. Class C Dist is established as a charitable Share Class such that, to the extent distributions are payable (in accordance with the terms of the distribution policy as disclosed in the Prospectus), 100% of any

distributable amount shall be paid to the registered charitable organisation basis.point, CRA number 20084141. Details on basis.point are available on www.basispoint.ie. Distributions will not be paid out of the capital of the fund.

During the Initial Offer Period, Shares are available for subscription at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Definitions

Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of the Fund:

"Dealing Deadline" means 1:30pm (Irish time) on the Business Day prior to the relevant Dealing Day.

"Valuation Point" means 11.59pm (Irish time) on the relevant Dealing Day.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 1.50% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares other than the Class C Dist Shares.

No fee is payable to the Manager in respect of Class C Dist Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Sales Charge
Up to 3% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

FINECO AM PASSIVE UNDERLYINGS 5

SUPPLEMENT DATED 7th July 2023

This Supplement contains specific information in relation to **Fineco AM Passive Underlyings 5** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 01 December 2022 and the addendum thereto (together the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Investment Objectives and Policies

The investment objective of the Fund is to achieve medium to long-term capital appreciation.

The Fund seeks to achieve its investment objective by primarily investing its Net Asset Value in units of a diversified portfolio of Underlying Funds. The Fund: (1) may invest up to 45% of its Net Asset Value in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world; (2) may invest up to 80% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate, provided that exposure to non-Investment Grade will be limited to maximum 30% of the Net Asset Value of the Fund; (3) may invest up to 25% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and (4) may invest up to 30% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

Asset allocation of the Fund will rotate over time depending on prevailing market conditions, i.e. the Manager will adjust the mix of investments, mentioned above, that the Fund holds based on the application of the investment selection analysis described below to the given market that such investments are in at a given point in time. This Fund will not have any particular industry or geographic focus.

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in equity and debt securities' markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including

but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture(i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest in Underlying Funds which have a low cost such as passive index-tracking funds, for example ETF products, and have a preference to invest in such low cost Underlying Funds.

The Fund may from time to time hold up to 10% of its Net Asset Value in cash on deposit or hold up to 20% of its Net Asset Value in money market instruments such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances; each for investment purposes and in order to meet redemption payments or the payment of expenses, or pending the investment of subscription proceeds in Underlying Funds. Such holdings may result in the Fund not being fully invested in Underlying Funds but shall be in accordance with Schedule II of the Prospectus.

The Fund may also invest up to 7.5% of its Net Asset Value in exchange traded commodities ("ETCs") being instruments that give investors indirect exposure to commodities in the form of certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movements of commodities - such as oil, gold and silver or a basket of commodities - and fluctuate in value based on the underlying commodity(ies). ETCs will be used by the Fund to gain indirect exposure to gold only. While such investment is mainly for the purposes of managing risk and protecting the value of the portfolio, it may be used for investment purposes in certain market conditions (e.g. in times of inflation). Exposure could potentially be through ETCs and/or through the Underlying Funds referred to under (3) above.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be

invested in non-UCITS (so-called "alternative investment funds"), therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/ basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or

management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled “Securities Financing Transactions”.

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund’s net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed “Collateral Policy”.

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund’s portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund’s portfolio is calculated daily and is measured relative to a benchmark composed of 70% of Bloomberg Euro Aggregate Bond Index and 30% MSCI ACWI Net Total Return EUR Index (the “Index”), an index which the Manager considers is a comparable benchmark to the Fund’s portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund’s portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund’s Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the medium-to- long term who are willing to accept a medium level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to either high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks;

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund and does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that such an assessment of Sustainability Risk may influence a decision by the Manager not to make an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class	Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type

Class L Acc	€100	10 January 2023 – 10 July 2023	Euro	No	Yes/ 3%	€1,000 / €100	Accumulating

Class A Acc	€100	Closed	Euro	No	No	€1,000 / €100	Accumulating

During the Initial Offer Period, Shares are available for subscription at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Definitions

Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of the Fund:

"Dealing Deadline" means 1:30pm (Irish time) on the Business Day prior to the relevant Dealing Day.

"Valuation Point" means 11.59pm (Irish time) on the relevant Dealing Day.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 1.50% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Sales Charge
Up to 3% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

FINECO AM PASSIVE UNDERLYINGS 6

SUPPLEMENT DATED 7th July 2023

This Supplement contains specific information in relation to **Fineco AM Passive Underlyings 6** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 01 December 2022 and the addendum thereto (together the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time.

An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Investment Objective and Policies

The investment objective of the Fund is to achieve medium to long-term capital appreciation. The Fund seeks to achieve its investment objective by primarily investing its Net Asset Value in units of a diversified portfolio of Underlying Funds. The Fund: (1) may invest up to 60% of its Net Asset Value in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world; (2) may invest up to 70% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate, provided that exposure to non-Investment Grade will be limited to maximum 30% of the Net Asset Value of the Fund; (3) may invest up to 25% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and (4) may invest up to 30% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

Asset allocation of the Fund will rotate over time depending on prevailing market conditions, i.e. the Manager will adjust the mix of investments, mentioned above, that the Fund holds based on the application of the investment selection analysis described below to the given market that such investments are in at a given point in time. This Fund will not have any particular industry or geographic focus.

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in equity and debt securities' markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated

with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest in Underlying Funds which have a low cost such as passive index-tracking funds, for example ETF products, and have a preference to invest in such low cost Underlying Funds.

The Fund may from time to time hold up to 10% of its Net Asset Value in cash on deposit or hold up to 20% of its Net Asset Value in money market instruments such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances; each for investment purposes and in order to meet redemption payments or the payment of expenses, or pending the investment of subscription proceeds in Underlying Funds. Such holdings may result in the Fund not being fully invested in Underlying Funds but shall be in accordance with Schedule II of the Prospectus.

The Fund may also invest up to 7.5% of its Net Asset Value in exchange traded commodities ("ETCs") being instruments that give investors indirect exposure to commodities in the form of certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movements of commodities - such as oil, gold and silver or a basket of commodities - and fluctuate in value based on the underlying commodity(ies). ETCs will be used by the Fund to gain indirect exposure to gold only. While such investment is mainly for the purposes of managing risk and protecting the value of the portfolio, it may be used for investment purposes in certain market conditions (e.g. in times of inflation). Exposure could potentially be through ETCs and/or through the Underlying Funds referred to under (3) above.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in non-UCITS (so-called "alternative investment funds"), therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond

prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in

currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to a benchmark composed of 60% of Bloomberg Euro Aggregate Bond Index and 40% MSCI ACWI Net Total Return EUR Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a

shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the medium-to-long term who are willing to accept a medium level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to either high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks;

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make

an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	10 January 2023 – 10 July 2023	Euro	No	Yes/3%	€1,000 / €100	Accumulating
Class A Acc	€100	Closed	Euro	No	No	€1,000 / €100	Accumulating

During the Initial Offer Period Shares are available for subscription at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Definitions

Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of the Fund:

"Dealing Deadline" means 1:30pm (Irish time) on the Business Day prior to the relevant Dealing Day.

"Valuation Point" means 11.59pm (Irish time) on the relevant Dealing Day.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

The Manager shall be entitled to a management fee of up to 1.50% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing

of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Sales Charge

Up to 3% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

FINECO AM PASSIVE UNDERLYINGS 7

SUPPLEMENT DATED 7th July 2023

This Supplement contains specific information in relation to **Fineco AM Passive Underlyings 7** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 01 December 2022 and the addendum thereto (together the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Investment Objective and Policies

The investment objective of the Fund is to achieve long-term capital appreciation.

The Fund seeks to achieve its investment objective by investing its Net Asset Value in units of a diversified portfolio of Underlying Funds. The Fund: (1) may invest up to 80% of its Net Asset Value in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world; (2) may invest up to 50% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate, provided that exposure to non-Investment Grade will be limited to maximum 30% of the Net Asset Value of the Fund; (3) may invest up to 25% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and (4) may invest up to 30% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

Asset allocation of the Fund will rotate over time depending on prevailing market conditions, i.e. the Manager will adjust the mix of investments, mentioned above, that the Fund holds based on the application of the investment selection analysis described below to the given market that such investments are in at a given point in time. This Fund will not have any particular industry or geographic focus.

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in global equity markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in

line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest in Underlying Funds which have a low cost such as passive index-tracking funds, for example ETF products, and have a preference to invest in such low cost Underlying Funds.

The Fund may from time to time hold up to 10% of its Net Asset Value in cash on deposit or hold up to 20% of its Net Asset Value in money market instruments such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances; each for investment purposes and in order to meet redemption payments or the payment of expenses, or pending the investment of subscription proceeds in Underlying Funds. Such holdings may result in the Fund not being fully invested in Underlying Funds but shall be in accordance with Schedule II of the Prospectus.

The Fund may also invest up to 7.5% of its Net Asset Value in exchange traded commodities ("ETCs") being instruments that give investors indirect exposure to commodities in the form of certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movements of commodities - such as oil, gold and silver or a basket of commodities - and fluctuate in value based on the underlying commodity(ies). ETCs will be used by the Fund to gain indirect exposure to gold only. While such investment is mainly for the purposes of managing risk and protecting the value of the portfolio, it may be used for investment purposes in certain market conditions (e.g. in times of inflation). Exposure could potentially be through ETCs and/or through the Underlying Funds referred to under (3) above.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in non-UCITS (so-called "alternative investment funds"), therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional

exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to a benchmark composed of 40% of Bloomberg Euro Aggregate Bond Index and 60% MSCI ACWI Net Total Return EUR Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a medium to high level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to either high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks;

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	10 January 2023 – 10 July 2023	Euro	No	Yes/3 %	€1,000 / €100	Accumulating
Class A Acc	€100	Closed	Euro	No	No	€1,000 / €100	Accumulating

During the Initial Offer Period, Shares are available for subscription at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Definitions

Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of the Fund:

"Dealing Deadline" means 1:30pm (Irish time) on the Business Day prior to the relevant Dealing Day.

"Valuation Point" means 11.59pm (Irish time) on the relevant Dealing Day.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 1.50% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Sales Charge
Up to 3% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in

respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors

The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus.

FINECO AM PASSIVE UNDERLYINGS 8

SUPPLEMENT DATED 7th July 2023

This Supplement contains specific information in relation to **Fineco AM Passive Underlyings 8** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 01 December 2022 and the addendum thereto (together, the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Investment Objective and Policies

The investment objective of the Fund is to achieve long-term capital appreciation.

The Fund seeks to achieve its investment objective by investing its Net Asset Value in units of a diversified portfolio of Underlying Funds. The Fund: (1) may invest up to 100% of its assets in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world; (2) may invest up to 40% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate; (3) may invest up to 15% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and (4) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

Asset allocation of the Fund will rotate over time depending on prevailing market conditions, i.e. the Manager will adjust the mix of investments, mentioned above, that the Fund holds based on the application of the investment selection analysis described below to the given market that such investments are in at a given point in time. This Fund will not have any particular industry or geographic focus.

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in global equity markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment

under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest in Underlying Funds which have a low cost such as passive index-tracking funds, for example ETF products, and have a preference to invest in such low cost Underlying Funds.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

The Fund may also invest up to 7.5% of its Net Asset Value in exchange traded commodities ("ETCs") being instruments that give investors indirect exposure to commodities in the form of certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movements of commodities - such as oil, gold and silver or a basket of commodities - and fluctuate in value based on the underlying commodity(ies). ETCs will be used by the Fund to gain indirect exposure to gold only. While such investment is mainly for the purposes of managing risk and protecting the value of the portfolio, it may be used for investment purposes in certain market conditions (e.g. in times of inflation). Exposure could potentially be through ETCs and/or through the Underlying Funds referred to under (3) above.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in non-UCITS (so-called "alternative investment funds"), therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain

or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to a benchmark composed of 15% Bloomberg Euro Aggregate Bond Index and 85% MSCI ACWI Net Total Return EUR Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a high level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to either high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks;

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	2 December 2022 – 1 June 2023	Euro	No	Yes/3 %	€1,000 / €100	Accumulating
Class A Acc	€100	Closed	Euro	No	No	€1,000 / €100	Accumulating

During the Initial Offer Period Shares are available for subscription at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Definitions

Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of the Fund:

"Dealing Deadline" means 1:30pm (Irish time) on the Business Day prior to the relevant Dealing Day.

"Valuation Point" means 11.59pm (Irish time) on the relevant Dealing Day.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 1.50% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Sales Charge
Up to 3% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common

management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

FINECO AM EMERGING MARKETS TARGET 2027 I

SUPPLEMENT DATED 7th July 2023

This Supplement contains specific information in relation to **Fineco AM Emerging Markets Target 2027 I** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of the ICAV dated 1 December 2022 and the Addendum thereto (together the "Prospectus").

The Fund may invest principally in units of Underlying Funds in such proportions as the Manager deems appropriate from time to time. Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. An investment in the Fund involves certain investment risks, including the possible loss of principal. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Target Date	4 June 2027
Subscription Period	means the 60 calendar days following the end of the Initial Offer Period or such longer or shorter period, as may be determined by the Directors in accordance with the requirements of the Central Bank.

Investment Objective and Policies

The Fund is being structured as a Fund giving a return to investors over the long term. The Fund is organised in a manner that it has two separate investment objectives for different time periods in the Fund's life as follows, and as explained in detail in each sub-section below:

1. **During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund; and**

2. **Following the Subscription Period, the investment objective of the Fund is to achieve long-term capital appreciation.**

As stated above, the main investment objective of the Fund is as set out in (2) above and in the section headed "*After the Subscription Period, up to and after the Target Date*". The reason for having a Subscription Period is to have a short 60 day time period during which the Fund will accept subscriptions and invest them in a manner designed to seek to achieve a positive investment return whilst maintaining liquidity for the Fund. After the Subscription Period, subscriptions into the Fund are no longer accepted. Although the Fund will be closed for subscriptions after the Subscription Period, requests for redemptions received prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day (i.e. each Business Day) in accordance with the section of the Prospectus entitled "Redemption of Shares".

During the Subscription Period

During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund. The Manager will seek to achieve this objective by investing principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by

sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

Investment in the Initial Strategies will be selected on the basis that will result in the Fund having a weighted average interest rate duration of no longer than 4.5 years.

Selection of debt instruments

The debt instruments that may be part of the Initial Strategies will be selected on the basis of the Manager's top-down analysis, which includes a view on the global investment outlook and analysis of market opportunities and securities based on an assessment of factors such as income yield, credit risk and bond duration. The Manager will assess each individual bond and the bond markets to understand the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the bonds under assessment. Following such credit assessment, the Manager appraises a potential investment in a bond in terms of relative value when compared to other bonds that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which bonds to acquire on behalf of the Fund. When an investment in a bond is made, it will be closely monitored by the Manager taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such bond will be kept under review by the Manager. The Manager may invest substantially or fully in government bonds issued by any Member State.

After the Subscription Period, up to and after the Target Date

Following the Subscription Period, the investment objective of the Fund is to achieve long-term capital appreciation.

The Fund seeks to achieve this objective in the following manner:

1. By reducing the Fund's allocation to the Initial Strategies, on a monthly basis ("Averaging Out").

   For example, it is anticipated that following the last day of the Subscription Period and, on a monthly basis, the Fund's asset allocation to Initial Strategies will reduce on average by 1.72% of the Fund's assets.

   The Manager, based on their discretion, can alter the above monthly amount by accelerating the reduction to the Initial Strategies on the basis of the Manager's top-down analysis which considers the key macroeconomic indicators and ratios of the major world economies, as described below in more detail.

   The aim of the Manager's top-down analysis is to develop a broad understanding of the current macroeconomic outlook and key trends that could influence financial markets. Important factors include but are not limited to a range of data on economic growth, unemployment rates, global and country-specific gross domestic product, inflation rates, currency, yield level, equity valuations, cash flows, earnings momentum, country risk profile, confidence indices as well as the monetary and fiscal policies implemented by Central Banks (for example the European Central Bank, the Bank of England etc.). Further attention is also given to the spreads on bond market debt across countries and sectors.

   The top-down analysis allows the Manager to take advantage of favourable market conditions when assessing whether or not to increase the Averaging Out amount above 1.72% a month. Favourable market conditions in this context mean conditions that, once the Manager has run this top-down analysis and assessed the resulting data and market indicators, indicate that it is favourable for the Manager to accelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies at a favourable price.

   The Averaging Out process will occur every month following the last day of the Subscription Period for approximately 58 months up to the Target Date. At the Target Date the Fund will be fully invested in the Longer Term Strategies. The gradual exposure of Shareholders to the Longer Term Strategies allows Shareholders to obtain a diversified exposure to the market while neutralizing the effect of short- term price fluctuations in the broader market.

2. As described above, every month the Fund will complete the Averaging Out process and the exposure to the Initial Strategies will be reduced and an exposure will be obtained to a diversified portfolio of Underlying Funds as described in detail immediately below (the "Longer Term Strategies").

   The Longer Term Strategies are made up of Underlying Funds that provide the Fund with a mixed exposure to certain asset classes while respecting the investment limits outlined below. This means that, as part of the Longer Term Strategies, the Fund:

   (1) may invest up to 100% of its assets in units of Underlying Funds that provide exposure to equities and equity-linked instruments (i.e. American depositary receipts and global depositary receipts) issued by issuers in emerging markets. Emerging markets refer to countries that are considered by the Manager to be countries that are characterised as emerging by the World Bank, the United Nations, the International Finance Corporation, the European Bank for Reconstruction and Development, or are included in an emerging markets index by a recognised index provider. Whilst the Fund may invest in Underlying Funds made up of investments that have an exposure to China and India; the Fund will not itself invest in those jurisdictions. Up to 10% of the assets of the Fund may be invested in equities issued by companies incorporated anywhere in the world or in Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world. The Fund's exposure to Russia via investment in the Underlying Funds shall be limited to 20% of the assets of the Fund. The Fund will not directly invest in securities listed or traded in Russia.;

   (2) may invest up to 20% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets), hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and

   (3) may invest up to 20% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

At any time, the Fund may only have a maximum exposure of 30%, either directly or through Underlying Funds, to non-Investment Grade debt securities.

Selection of Underlying Funds

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which make up the Initial Strategies and the Longer Term Strategies.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in equity markets in countries considered by the Manager to be emerging markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective.

The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers, as follows:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and
- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Fund also being managed by the Manager.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

Underlying Funds
The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in alternative investment funds ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to either high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risk; and

(ii) The Manager also assess whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

The Manager has determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risks may influence a decision by the Manager to not make an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction; and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds; and, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures on bonds and/or call options on bonds as well as buying put options has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall. The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend market e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to

an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered

into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled “Securities Financing Transactions”.

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund’s net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund’s portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund’s portfolio is calculated daily and is measured relative to the MSCI Emerging Markets Daily Net Total Return (the “Index”), an index which the Manager considers is a comparable benchmark to the Fund’s portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund’s portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund’s Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class	Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type

Class L Acc	€100	From 19 May 2022 to 7 June 2022	Euro	No	Up to 2%	€1,000 / €100	Accumulating
Class D Acc	€100	From 19 May 2022 to 7 June 2022	Euro	No	No	€500 / €100	Accumulating

During the Initial Offer Period, Shares are available for subscription at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee

The Manager shall be entitled to the following management fee of the Net Asset Value of each Class of Shares.

Management Fee (% of NAV) for each Share Class	
During the Subscription Period	Up to 0.20%
After the Subscription Period up to the end of year 1	Up to 1%
After the end of year 1 up to the end of year 2	Up to 1.4%
After the end of year 2 up to the end of year 3	Up to 1.75%
After the end of year 3 up to the end of year 4	Up to 2.10%
After the end of year 4	Up to 2.55%

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding, in which case, in order to avoid double charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000, will be borne by the Fund and amortised over the first two years of the Fund's operation (or such other period as may be determined by the Directors at their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

FINECO AM ADVISORY 9 TARGET III

SUPPLEMENT DATED 30 JUNE 2025

This Supplement contains specific information in relation to **Fineco AM Advisory 9 Target III** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus dated of FAM Evolution ICAV dated 01 December 2022 and each addendum thereto (together the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Subscription Period	The original Subscription Period closed in 2022 (the **Original Subscription Period**). The subsequent Subscription Period means the 60 calendar days from 1 July 2025 to 1 September 2025 or such longer or shorter period, as may be determined by the Directors and on a quarterly basis thereafter at the discretion of the Directors and once notified in advance to Shareholders. Shares will be available for subscription during this time, at the prevailing Net Asset Value (NAV) per Share.

Investment Objective and Policies

The investment objective of the Fund is to achieve long-term capital appreciation.

The Fund:

(1) may invest up to 100% (only after the completion of the Averaging Out process) of its Net Asset Value in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world;

(2) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate;

(3) may invest up to 15% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and

(4) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

At any time, the Fund may only have a maximum exposure of 30%, through Underlying Funds, to non-Investment Grade debt securities.

Selection of Underlying Funds

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and
- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

Any Fund assets directly held by the Fund (i.e. not held through Underlying Funds) will be listed or traded on Recognised Markets as set out in Schedule I of the Prospectus entitled "Recognised Markets". For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

The Fund may also invest directly up to 10% of its Net Asset Value in exchange traded commodities ("ETCs") being instruments that give investors indirect exposure to commodities in the form of certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movements of commodities – such as oil, gold and silver or a basket of commodities – and fluctuate in value based on the underlying commodity(ies).

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in alternative investment funds ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in

the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities /basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by “locking in” gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund’s bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond’s portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund’s investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies (“FX Forwards”) to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund’s overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager’s view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps (“IRS”)

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases,

reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised
inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the

Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the MSCI ACWI Net Total Return EUR Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate to high level of volatility. The Fund is not designed for investors who need current income.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to either high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assess whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given

that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risks may influence a decision by the Manager not to make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	Closed	Euro	No	Up to 2%	€1,000 / €100	Accumulating
Class D Acc	€100	Closed	Euro	No	No	€500 / €100	Accumulating

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to the following management fee of the Net Asset Value of each Class of Shares;

Management Fee (% of NAV) each Share Class	
During the Original Subscription Period	Up to 0.20%
After the Original Subscription Period up to the end of year 1	Up to 1.50%
After the end of year 1 up to the end of year 2	Up to 2.50%
After the end of year 2	Up to 2.50%

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

FINECO AM CUBE TREND OPPORTUNITY FUND

SUPPLEMENT DATED 7th July 2023

This Supplement contains specific information in relation to **Fineco AM Cube Trend Opportunity Fund** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorized by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 01 December 2022 and the addendum thereto (together the "Prospectus").

The Fund may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time.

An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Investment Objective and Policies

The investment objective of the Fund is to achieve long-term capital appreciation.

The Fund seeks to achieve its investment objective by primarily investing its Net Asset Value in units of a diversified portfolio of Underlying Funds. The Fund: (1) may invest up to 70% of its Net Asset Value in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world, including global equities, both public (listed on securities markets and exchanges around the world) and private equity-related instruments, such as preferred stocks, warrants as well as diversified portfolios of equities of companies which derive revenues from activities related to real estate (REITs); (2) may invest up to 90% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, inflation linked bonds, municipal bonds, convertible debt, and commercial paper) with a fixed or floating rate, provided that exposure to non-Investment Grade will be limited to maximum 30% of the Net Asset Value of the Fund; (3) invest up to 20% of its Net Asset Value in units of Underlying Funds or ETCs, as described below, which provide the Fund with an indirect exposure to commodities (4) may invest up to 25% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and (5) may invest up to 40% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

Asset allocation of the Fund will rotate over time depending on prevailing market conditions, i.e. the Manager will adjust the mix of investments, mentioned above, that the Fund holds based on the application of the investment selection analysis described below to the given market that such investments are in at a given point in time. This Fund will not have any particular industry or geographic focus.

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds. The asset allocation of the Fund is intended to be flexible to permit the Fund to allocate across a wide range of countries and asset classes and retain the ability to modify its exposure based on market conditions, as further described below.

The Manager will select the Underlying Funds by analyzing the universe of relevant Underlying Funds, which have a focus on investing in equity and debt securities' markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence

will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity.

Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and
- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest in Underlying Funds which have a low cost such as passive index-tracking funds, for example ETF products, and have a preference to invest in such low cost Underlying Funds.

Asset allocation

The Manager's asset allocation strategy will be informed by a proprietary quantitative model (the "Model"), which is described below. This proprietary Model will be based upon moving average strategies which identify directional trends that may assist the Manager in achieving the optimal asset allocation of the Fund's portfolio. A moving average represents a series of asset price averages over time. Using a moving average to analyze price movements can make it easier for the Manager to see at a glance which way the current price of the underlying instrument is trending up or down. When asset prices cross over their moving average, the Model produces signals which may allow the Manager to react to price changes immediately and adjust the portfolio composition accordingly. For example, if the Model generates an overweight equity signal, the Manager may decide, on a discretionary basis, to weigh more heavily (above 50% of the Fund's Net Asset Value) towards Underlying Funds which provide an exposure to equities. Conversely, if the Model generates an underweight signal, the Manager may decide to reduce the allocation to Underlying Funds which provide an exposure to equities (below 50% Fund's Net Asset Value) and weigh more heavily towards Underlying Funds which provide an exposure to debt instruments. On a daily basis, new price data is processed by the Model and included in the calibration for the next day's trading signals.

The Fund may from time to time hold up to 10% of its Net Asset Value in cash on deposit for ancillary liquidity purposes (which 10% limit may be raised up to 20% in the case of deposits made with the Depositary subject to and in accordance with Schedule II of the Prospectus). The Fund may also hold up to 40% of its Net Asset Value in money market instruments such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances; each for investment purposes and in order to meet redemption payments or the payment of expenses, or pending the investment of subscription proceeds in Underlying Funds. Such holdings may result in the Fund not being fully invested in Underlying Funds but shall be in accordance with Schedule II of the Prospectus.

Further to the above, the Fund may invest up to 20% of its Net Asset Value in exchange traded commodities ("ETCs") being instruments that give investors indirect exposure to commodities in the form of certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movements of

commodities – such as oil, gold and silver or a basket of commodities – and fluctuate in value based on the underlying commodity(ies).The Fund may also invest up to 20% of its Net Asset Value in fixed and/or floating rate transferable debt securities of Investment Grade (including corporate debt securities, bonds and notes, zero-coupon, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide. The Manager may decide to invest directly in the above-mentioned instruments when expected returns similar to those of Underlying Funds are offered with a better risk/reward ratio.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in non-UCITS (so-called "alternative investment funds"), therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii)risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds; and, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)–(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address

this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall. The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to a benchmark composed of 50% of Bloomberg Barclays Euro Aggregate Total Return Index Value Unhedged EUR and 50% MSCI World Net Total Return Index (the "Index"), which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a moderate level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying**

investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to either high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assess whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor have Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager not to make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	Closed	Euro	No	Yes/3%	€500,000 / €10,000	Accumulating
Class A Acc	€100	2 December 2022 - 1 June 2023	Euro	No	No	€500,000 / €10,000	Accumulating

During the Initial Offer Period Shares are available for subscription at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading

"Fees and Expenses".

Manager's Fee

The Manager shall be entitled to a management fee of up to 1.50% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Sales Charge

Up to 3% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

FINECO AM PASSIVE UNDERLYINGS 8 TARGET 2026

SUPPLEMENT DATED 7th July 2023

This Supplement contains specific information in relation to **Fineco AM Passive Underlyings 8 Target 2026** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus of FAM Evolution ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Target Date	13 February 2026
Subscription Period	means the 60 calendar days following the end of Initial Offer Period or such longer period, as may be determined by the Directors in accordance with the requirements of the Central Bank.

Investment Objective and Policies

The Fund is being structured as a Fund giving a return to investors at the Target Date. The Fund is organised in a manner that it has two separate investment objectives for different time periods in the Fund's life as follows, and as explained in detail in each sub-section below:

1. **During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund; and**
2. **Following the Subscription Period the investment objective of the Fund is to achieve long-term capital appreciation**.

As stated above, the main investment objective of the Fund is as set out in (2) above and in the section headed "After the Subscription Period and up to the Target Date". The reason for having a Subscription Period is to have a short 60 day time period during which the Fund will accept subscriptions and invest them in a manner designed to seek to achieve a positive investment return whilst maintaining liquidity for the Fund. After the Subscription Period subscriptions into the Fund are no longer accepted. Although the Fund will be closed for subscriptions after the Subscription Period, requests for redemptions received prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day (i.e. each Business Day) in accordance with the section of the Prospectus entitled **"**Redemption of Shares".

During the Subscription Period

During the Subscription Period, the objective of the Fund will be to seek to provide capital appreciation whilst maintaining liquidity for the Fund. The Manager will seek to achieve this objective by principally investing its Net Asset Value in units of a diversified portfolio of Underlying Funds, which provide an exposure to short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and short term fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide the ("Initial Strategies").

Investment in the Initial Strategies will be selected on the basis that will result in the Fund having a weighted average interest rate duration of no longer than 3 years.

After the Subscription Period, up to and after the Target Date

Following the Subscription Period the investment objective of the Fund is to achieve long-term capital appreciation.

The Fund seeks to achieve this objective in the following manner:

1. By reducing the Fund's allocation to Initial Strategies on a monthly basis ("Averaging Out").

   For example, it is anticipated that, following the last day of the Subscription Period and on a monthly basis, the Fund's asset allocation to Initial Strategies will reduce by approximately 2.94% of the Fund's assets.

   The Manager, based on their discretion, can alter the above monthly amount by accelerating the reduction to the Initial Strategies according to their view of market conditions. The Manager's view on market conditions will be informed by a proprietary quantitative model designed by the Manager which is described below (the "Quant Model"). Each monthly reduction will be followed by a corresponding investment by the Fund in the Longer Term Strategies (described at point 2 below). This Averaging Out will continue every month up to the Target Date.

   The Manager will run the Quant Model in order to analyse market conditions which will inform them as to how much they should accelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies.

   This proprietary Quant Model allows the Manager assess market conditions using quantifiable, definitive and numerical data that can be used for checking portfolio return robustness via historical simulations; i.e. it is analysis on documented and definitive information on the past performance of the relevant market. The Quant Model will be based on technical and market indicators such as the relative strength index which analyses the historical strength or weakness of a stock or market based on closing prices of a recent trading period. The analysis produced by the Quant Model allows the Manager take advantage of favourable market conditions when assessing whether or not to increase the Averaging Out amount above 2.94% a month. Favourable market conditions in this context mean conditions that, once the Manager has run the Quant Model and assessed the resulting data and market indicators arising from the running of the Quant Model, indicate to the Manager that it is favourable for the Manager to accelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies at a favourable price.

   The Averaging Out process will occur every month following the last day of the Subscription Period for 34 months up to the Target Date. At the Target Date the Fund will be fully invested in the Longer Term Strategies. This gradual exposure of Shareholders to the Longer Term Strategies allows Shareholders obtain a diversified exposure to the market while neutralizing the effect of short-term price fluctuations in the broader market. In addition, the Quant Model allows the Manager the discretion to take advantage of favourable market conditions (described above) in respect of potentially accelerating Shareholders exposure to the Longer Term Strategies.
2. As described above, every month the Fund will complete the Averaging Out process and the exposure to the Initial Strategies will be reduced and an exposure will be obtained to a diversified portfolio of Underlying Funds as described in detail immediately below (the "Longer Term Strategies"). The Longer Term Strategies are made up of Underlying Funds that provide the Fund with a mixed exposure to certain asset classes while respecting the investment limits outlined below. This means that as part of the Longer Term Strategies the Fund:

   (1) may invest principally (only after the completion of the Averaging Out process) in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world;

   (2) may invest up to 40% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate;

   (3) may invest up to 15% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the

UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and

(4) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

Selection of Underlying Funds

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which make up the Initial Strategies and the Longer Term Strategies.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in money market instruments, equity and debt securities' markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and
- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest in Underlying Funds which have a low cost such as passive index-tracking funds, for example ETF products, and have a preference to invest in such low cost Underlying Funds.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

Any Fund assets directly held by the Fund (i.e. not held through Underlying Funds) will be listed or traded on Recognised Markets as set out in Schedule I of the Prospectus entitled "Recognised Markets". For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

The Fund may also invest directly up to 7.5% of its Net Asset Value in exchange traded commodities ("ETCs") being instruments that give investors indirect exposure to commodities in the form of certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movements of commodities – such as oil, gold and silver or a basket of commodities – and fluctuate in value based on the underlying commodity(ies). ETCs will be used by the Fund to gain indirect exposure to gold only. While such investment is mainly for the purposes of managing risk and protecting the value of the portfolio, it may be used for investment purposes in certain market conditions (e.g. in times of inflation). Exposure could potentially be through ETCs and/or through the Underlying Funds referred to under (3) above.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in alternative investment funds ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations.

Following this “look through” analysis, if the Fund’s exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund’s bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond’s portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by “locking in” gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund’s bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond’s portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund’s investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies (“FX Forwards”) to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund’s overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager’s view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the

Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled “Securities Financing Transactions”.

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund’s net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed “Collateral Policy”.

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund’s portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund’s portfolio is calculated daily and is measured relative to a benchmark composed of 15% Bloomberg Euro Aggregate Bond Index and 85% MSCI ACWI Net Total Return EUR Index (the “Index”), an index which the Manager considers is a comparable benchmark to the Fund’s portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund’s portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund’s Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a high level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure
The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund’s underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund’s investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold**

underlying investments which may expose the Fund to either high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Acc	€100	From 16 February 2023 to 17 February 2023	Euro	No	No	€1,000 / €100	Accumulating

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to the following management fee of the Net Asset Value of each Class of Shares:

Management Fee (% of NAV) each Share Class	
During the Subscription Period	Up to 0.20%
After the Subscription Period	Up to 1.50%

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

ADVISORY 9 PROGRESSION 2025 FINECO AM FUND

SUPPLEMENT DATED 01 SEPTEMBER 2023

This Supplement contains specific information in relation to **Advisory 9 Progression 2025 Fineco AM Fund** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus dated of FAM Evolution ICAV dated 01 December 2022 and the addendum thereto (together the "Prospectus").

The Fund may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed nor a capital protected product. In seeking to achieve its investment objective, the Fund will at times, as described in greater detail below, invest directly or indirectly in a diversified portfolio of instruments and may enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund may bear credit risk in respect of its portfolio of instruments so that if one or more of the issuers of any of those instruments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day	means every Wednesday or if a particular Wednesday is not a day on which retail banks and securities markets in Luxembourg are normally open for business, the next following day on which retail banks and securities markets in Luxembourg are normally open for business.
Target Date	21 May 2025
Subscription Period	means from 06 September 2023 to 14 November 2023, as may be determined by the Directors in accordance with the requirements of the Central Bank.

Investment Objective and Policies

The investment objective of the Fund is to seek to (i) protect the Fund's Net Asset Value per Share at certain percentages of the Initial Offer Price up to the Target Date as detailed under the section headed "Net Asset Value Protection during the Phases" below and (ii) achieve long-term capital appreciation.

The Fund is organised in such a manner that encompasses three distinct phases of the Fund, as explained in the subsequent subsections.

Phase 1: During the Subscription Period

During the Subscription Period, the Manager will invest principally , either directly, or indirectly via units of

Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

The reason for having a Subscription Period is to have a short period during which the Fund will accept subscriptions and invest them in a manner designed to seek to achieve a positive investment return whilst maintaining liquidity for the Fund. After the Subscription Period subscriptions into the Fund are no longer accepted. Although the Fund will be closed for subscriptions after the Subscription Period, requests for redemptions received prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day (i.e. each Business Day) in accordance with the section of the Prospectus entitled **"**Redemption of Shares".

Selection of direct investments

The instruments that may be part of the Initial Strategies will be selected based on the Manager's top-down analysis, which includes a view on the global investment outlook and analysis of market opportunities and securities based on an assessment of factors such as income yield, credit risk and bond duration. The Manager will assess each individual security and the bond markets to understand the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the securities under assessment. Following such credit assessment, the Manager appraises a potential investment in a security in terms of relative value when compared to other securities that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which instruments to acquire on behalf of the Fund. When an investment is made, it will be closely monitored by the Manager taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such instrument will be kept under review by the Manager. The Manager may invest substantially or fully in government bonds issued by any Member State.

As part of the Initial Strategies, the Fund may use the financial derivative instruments listed in the section of this Supplement headed "Types of Financial Derivative Instruments".

Phase 2: After the Subscription Period and up to the Target Date

Following the Subscription Period, the Fund will gradually reduce its allocation to the Initial Strategies up to the Target Date in the following manner:

1. It is anticipated that following the last day of the Subscription Period, the Fund's asset allocation to the Initial Strategies will reduce by approximately (i)15% at the end of the first six months, (ii) 15% at the end of the second six months and (iii) 70% at the end of the third six months. Each reduction will be followed by a corresponding investment by the Fund in the Longer Term Strategies (described at point 2 below) (the "Gradual Exposure").

   The Manager, based on their discretion, can alter the percentages disclosed above by decelerating the reduction to the Initial Strategies according to their view of market conditions and to mitigate the risk of short-term price fluctuations in the market at or around each six month period end. The Manager's view on market conditions will be informed by a proprietary quantitative model designed by the Manager which is described below (the "Quant Model") and/or by qualitative considerations that include macroeconomic conditions, valuations and risk sentiment.

   This analysis of market conditions will inform the Manager as to whether and by how much they should decelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies.

   The proprietary Quant Model allows the Manager assess market conditions using quantifiable, definitive and numerical data that can be used for checking portfolio return robustness via historical simulations; i.e. it is analysis on documented and definitive information on the past performance of the relevant market. It is based on technical and market indicators such as the relative strength index which analyses the historical strength or weakness of a stock or market based on closing prices of a recent trading period.

2. As described above, every six months following the last day of the Subscription Period, the exposure to the Initial Strategies will be reduced and an exposure will be obtained to a diversified portfolio of Underlying Funds as described in detail immediately below (the "Longer Term Strategies"). The Longer Term Strategies are made up of Underlying Funds that provide the Fund with a mixed exposure to certain asset classes while respecting the investment limits outlined below. This means that as part of the Longer Term Strategies the Fund:

   (1) may invest principally in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world;

   (2) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate;

   (3) may invest up to 15% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and

   (4) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

At the time of purchase of the debt securities either directly or via Underlying Funds, the Fund may only have a maximum exposure of 30% of its Net Asset Value to non-Investment Grade debt securities. Where a debt security ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security either directly or indirectly via Underlying Funds.

Selection of Underlying Funds

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which may make up the Initial Strategies and will make up the Longer Term Strategies.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in money market instruments, equity and debt securities' markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down

market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

Any Fund assets directly held by the Fund (i.e. not held through Underlying Funds) will be listed or traded on Recognised Markets as set out in Schedule I of the Prospectus entitled "Recognised Markets". For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

The Fund may also invest directly up to 10% of its Net Asset Value in exchange traded commodities ("ETCs") being instruments that give investors indirect exposure to commodities in the form of certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movements of commodities – such as oil, gold and silver or a basket of commodities – and fluctuate in value based on the underlying commodity(ies).

Underlying Funds
The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in alternative investment funds ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Phase 3: After the Target Date

At the Target Date, it is expected (subject to the Manager's discretion as disclosed above) that the Fund will be fully invested in the Longer Term Strategies.

This gradual exposure of Shareholders to the Longer Term Strategies allows Shareholders obtain a diversified exposure to the market while neutralizing the effect of short-term price fluctuations in the broader market.

Net Asset Value Protection during the Phases

The Fund will seek to protect the Initial Offer Price per Share of redeeming Shareholders (subject to any anti-dilution levy that may be applied as set out in the Prospectus on page 42) in line with the below table. The Fund will seek to achieve this by entering into a total return swap ("TRS") in which it will swap out the performance and income of the instruments that make up the Initial Strategies it has purchased in return for the payment by a OTC counterparty of a fixed rate on the notional amount of the TRS (i.e. on the face value of the TRS), subject to the non-default of the OTC counterparty. The TRS will be unfunded. The TRS will contain a provision which will allow the Manager aim to return to redeeming Shareholders a percentage of the Initial Offer Price per Share for the corresponding period of the Gradual Exposure and as set out in the following table:

Period	Percentage
Phase 1: During the Subscription Period	aim to protect 100% of the Initial Offer Price per Share
Phase 2: From the end of the Subscription Period up to the end of the sixth month thereafter	aim to protect 100% of the Initial Offer Price per Share
Phase 2: From the start of the seventh month up to the end of the twelfth month after the Subscription Period	aim to protect 85% of the Initial Offer Price per Share
Phase 2: From the start of the thirteenth month up to the end of the eighteenth month after the Subscription Period	aim to protect 70% of the Initial Offer Price per Share
Phase 3: After the Target Date	aim to protect 0% of the Initial Offer Price per Share.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or over the counter ("OTC") FDI for hedging, risk reduction, or investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDI, please refer to the "Risk Factors" section of the Prospectus.

Types of Financial Derivative Instruments

(i) futures contracts on dividends, bonds, interest rates, equity securities/basket of equity securities, equity/fixed income indices, or basket of equity/fixed income indices;
(ii) forwards on currencies and/or bonds;
(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices, (iii) futures;
(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and
(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i) –(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Takingthese actions, the Fund may reduce the duration of the Fund's bond portfolio exposure. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interestrates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities, equity indices or a basket of equity indices in order to provide an efficient,liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value. When the Fund is using futures in these circumstances, the Fund would be taking a short position for risk reduction.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking such actions,the Fund may increase the duration of the Fund's bond portfolio exposure. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall. The Fund may engage in an interest rate swap transaction with the same purpose This strategy can be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bondprices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure toequity markets, and to enhance performance and/or to manage equity market risk to reflect a view on thefuture direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit (i.e. the purchase and sale of an asset in order to profit from a difference in the asset's price between markets whilst ensuring that prices do not deviate substantially from fair value for long periods of time), to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposureof securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use options and forwards on currencies ("FX forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce riskas described in detail in this paragraph.

Forwards

The Fund may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets which the Fund may hold or which the Fund may wish to buy.

Interest Rate Futures and Interest Rate Swaps

The Fund may use interest rate futures or interest rate swaps in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When interest rate futures or swaps are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

TRS

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of

assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivatives Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the MSCI ACWI Net Total Return EUR Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. The Index is an equity index designed to represent the performance of large and mid-cap stocks across 23 developed markets. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 350% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term and seeking protection of the value of their initial investment at certain percentages of the Initial Offer Price up to the Target Date and who are willing to accept a moderate to high level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable

economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	From 05 September 2023 – to 05 September 2023	Euro	No	Up to 2%	€100 / €100	Accumulating
Class D Acc	€100	From 05 September 2023 to 05	Euro	No	No	€500 / €100	Accumulating

		September 2023					
Class A Acc	€100	From 05 September 2023 to 05 September 2023	Euro	No	No	€100 / €100	Accumulating
Class A Dist	€100	From 05 September 2023 to 05 September 2023	Euro	No	No	€100 / €100	Distributing
Class A1 Dist	€100	From 05 September 2023 – to 05 September 2023	Euro	No	No	€5,000,000 / €100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a fee of up to 1,85% per annum (plus VAT,if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

MEGATRENDS PROGRESSION 2025 FINECO AM FUND

SUPPLEMENT DATED 01 SEPTEMBER 2023

This Supplement contains specific information in relation to **MegaTrends Progression 2025 Fineco AM Fund** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub- funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of the ICAV dated 1 December 2022 and the addendum thereto (together the "Prospectus").

The Fund may invest principally in units of Underlying Funds in such proportions as the Manager deems appropriate from time to time. Shares of the Fund are not deposits or obligations of, or guaranteed or endorsed by, any bank and the amount invested in Shares may fluctuate up and/or down. An investment in the Fund involves certain investment risks, including the possible loss of principal. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed nor a capital protected product. In seeking to achieve its investment objective, the Fund will at times, as described in greater detail below, invest directly or indirectly in a diversified portfolio of instruments and may enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund may bear credit risk in respect of its portfolio of instruments so that if one or more of the issuers of any of those instruments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day	means every Wednesday or if a particular Wednesday is not a day on which retail banks and securities markets in Luxembourg are normally open for business, the next following day on which retail banks and securities markets in Luxembourg are normally open for business.
Target Date	21 May 2025
Subscription Period	means from 06 September 2023 to 14 November 2023 or such longer or shorter period, as may be determined by the Directors in accordance with the requirements of the Central Bank.

Investment Objective and Policies

The investment objective of the Fund is to seek to (i) protect the Fund's Net Asset Value per Share at certain percentages of the Initial Offer Price up to the Target Date as detailed under the section headed "*Net Asset Value Protection during the Phases*" below and (ii) achieve long-term capital

appreciation.

The Fund is organised in such a manner that encompasses three distinct phases of the Fund, as explained in the subsequent subsections.

Phase 1: During the Subscription Period

During the Subscription Period, the Manager will invest principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies"). The reason for having a Subscription Period is to have a short period during which the Fund will accept subscriptions and invest them in a manner designed to seek to achieve a positive investment return whilst maintaining liquidity for the Fund. After the Subscription Period, subscriptions into the Fund are no longer accepted. Although the Fund will be closed for subscriptions after the Subscription Period, requests for redemptions received prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day (i.e. each Business Day) in accordance with the section of the Prospectus entitled "Redemption of Shares".

Selection of debt instruments

The debt instruments that may be part of the Initial Strategies will be selected based on the Manager's top-down analysis, which includes a view on the global investment outlook and analysis of market opportunities and securities based on an assessment of factors such as income yield, credit risk and bond duration. The Manager will assess each individual bond and the bond markets to understand the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the bonds under assessment. Following such credit assessment, the Manager appraises a potential investment in a bond in terms of relative value when compared to other bonds that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which bonds to acquire on behalf of the Fund. When an investment in a bond is made, it will be closely monitored by the Manager taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such bond will be kept under review by the Manager. The Manager may invest substantially or fully in government bonds issued by any Member State.

As part of the Initial Strategies, the Fund may use the financial derivative instruments listed in the section of this Supplement headed "Types of Financial Derivative Instruments".

Phase 2: After the Subscription Period and up to the Target Date

Following the Subscription Period, the Fund will gradually reduce its allocation to the Initial Strategies up to the Target Date in the following manner:

1. It is anticipated that, following the last day of the Subscription Period, the Fund's asset allocation to the Initial Strategies will reduce by approximately (i)15% at the end of the first six months, (ii) 15% at the end of the second six months and (iii) 70% at the end of the third six months. Each reduction will be followed by a corresponding investment by the Fund in the Longer Term Strategies (described at point 2 below) (the "Gradual Exposure").

   The Manager, based on their discretion, can alter the percentages disclosed above by decelerating the reduction to the Initial Strategies according to their view of market conditions

and to mitigate the risk of short-term price fluctuations in the market on or around each six month period end. The Manager's view on market conditions will be informed by a proprietary quantitative model designed by the Manager which is described below (the "Quant Model") and/or by qualitative considerations that include macroeconomic conditions, valuations and risk sentiment.

This analysis of market conditions will inform the Manager as to whether and by how much they should decelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies.

The proprietary Quant Model allows the Manager to assess market conditions using quantifiable, definitive and numerical data that can be used for checking portfolio return robustness via historical simulations; i.e. it is analysis on documented and definitive information on the past performance of the relevant market. It is based on technical and market indicators such as the relative strength index which analyses the historical strength or weakness of a stock or market based on closing prices of a recent trading period.

2. As described above, every six months following the last day of the Subscription Period, the exposure to the Initial Strategies will be reduced and an exposure will be obtained to a diversified portfolio of Underlying Funds as described in detail immediately below (the "Longer Term Strategies"). The Longer Term Strategies are made up of Underlying Funds that provide the Fund with a mixed exposure to certain asset classes while respecting the investment limits outlined below. This means that as part of the Longer Term Strategies the Fund:

    I. may invest principally in Underlying Funds that have a primary focus on providing exposure to equities issued by companies operating in sectors and geographical regions that benefit from ongoing global megatrends.

    Global megatrends ("Megatrends") are generally defined as global forces of development that create fundamental shifts in the progress of society thus impacting business, the economy, culture and the way we live. Examples of Megatrends that are reshaping our world currently are demographic and social changes, climate change and resource scarcity, technological breakthroughs and rapid urbanization. Megatrends evolve independently of the economic cycle and thus possess the capacity to continuously redraw the financial landscape. Underpinning these Megatrends, it is possible to identify investment sub-themes which act as both drivers and beneficiaries of these Megatrends.

    A summary of some of the sub-themes of the abovementioned Megatrends prevalent in the world today are listed below. Potential Shareholders should be aware that the below listed headings are examples of certain sub-themes of Megatrends and are for illustrative purposes only. It is important for potential Shareholders to note that what constitutes a Megatrend sub-theme today may not be classed as such in the future. This is not intended to be an exhaustive list and these sub-themes have the ability to change over time. Therefore, the Fund does not commit to definitively invest in each or all of these Megatrend sub-themes at any time:

- Ageing Population: The ageing of the world's population is widely considered one of the most enduring demographic shifts in human history. Companies which have a focus on improving developments in healthcare, developments in Bio Technology and shifting consumer trends leading to a longer life expectancy are in a position to benefit greatly from this trend;
- Oncology: With cancer diagnoses expected to increase in the next 20 years, companies which are committing capital to cancer research to develop better diagnostics to cure cancer are in a position to benefit from developments in the treatment of cancer;
- Water: Population growth, urbanization and water-intensive dietary changes are adding to rising industrial water demand. Companies at the forefront of new technologies required to accommodate increasing global demand for water are well placed to benefit from this trend;
- Electric & Autonomous Vehicles: With a shift away from internal combustion engine vehicles and movement toward the broad usage of autonomous vehicles, manufacturers of both electric and autonomous vehicles as well as their components and other companies in the supply chain all stand to be beneficiaries from this trend; and
- Drones: Extensive growth in consumer and commercial drone usage means that companies involved in the production of these technologies will benefit from this evolving trend.

II. may invest up to 20% of its Net Asset Value in units of Underlying Funds managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and

III. may invest up to 20% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate.

At the time of purchase of debt securities either directly or indirectly via Underlying Funds, the Fund may only have a maximum exposure of 30% of its Net Asset Value to non-Investment Grade debt securities. Where a debt security ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security either directly or indirectly via Underlying Funds.

Selection of Underlying Funds

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which may make up the Initial Strategies and will make up the Longer Term Strategies.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in instruments that make up the Initial Strategies and Longer

Term Strategies, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers, as follows:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and
- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in alternative investment funds ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds

in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Phase 3: After the Target Date

At the Target Date, it is expected (subject to the Manager's discretion as disclosed above) that the Fund will be fully invested in the Longer Term Strategies

The gradual exposure of Shareholders to the Longer Term Strategies allows Shareholders to obtain a diversified exposure to the market while neutralizing the effect of short-term price fluctuations in the broader market.

Net Asset Value Protection during the Phases

The Fund will seek to protect the Initial Offer Price per Share of redeeming Shareholders (subject to any anti-dilution levy that may be applied as set out in the Prospectus on page 42) in line with the below table. The Fund will seek to achieve this by entering into a total return swap ("TRS") in which it will swap out the performance and income of the instruments that make up the Initial Strategies it has purchased in return for the payment by a OTC counterparty of a fixed rate on the notional amount of the TRS (i.e. on the face value of the TRS), subject to the non-default of the OTC counterparty. The TRS will be unfunded. The TRS will contain a provision which will allow the Manager aim to return to redeeming Shareholders a percentage of the Initial Offer Price per Share for the corresponding period of the Gradual Exposure and as set out in the following table:

Period	Percentage
Phase 1: During the Subscription Period	aim to protect 100% of the Initial Offer Price per Share
Phase 2: From the end of the Subscription Period up to the end of the sixth month thereafter	aim to protect 100% of the Initial Offer Price per Share
Phase 2: From the start of the seventh month up to the end of the twelfth month after the Subscription Period	aim to protect 85% of the Initial Offer Price per Share
Phase 2: From the start of the thirteenth month up to the end of the eighteenth month after the Subscription Period	aim to protect 70% of the Initial Offer Price per Share
Phase 3: After the Target Date	aim to protect 0% of the Initial Offer Price per Share.

SFDR Classification: Article 6 Fund.

SFDR Disclosures

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying

investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor considered in the investment decisions of the Manager in respect of the assets which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold assets which may expose the Fund to either high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider ("Data Provider(s)") in order to assess the relevant investment against Sustainability Risk and to identify whether the investment is vulnerable to such risk; and

(ii) The Manager also assess whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of Sustainability Risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risks may influence a decision by the Manager not to make an investment or dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial- related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for hedging, risk reduction and/or investment purposes.

The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;
(ii) OTC forwards on currencies;
(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;
(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and
(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i) - (v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the abovementioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing the exposure. The indices, if any, that the Fund takes exposure to will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder

the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX Forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaptions

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest rate swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised
inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX volatility swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

TRS

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled “Securities Financing Transactions”.

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund’s net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed “Collateral Policy”.

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value- at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund’s portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund’s portfolio is calculated daily and is measured relative to the VaR of the MSCI World Net Total Return EUR Index (the “Index”), an index which the Manager considers is a comparable benchmark to the Fund’s portfolio. The Index is an equity index designed to represent the performance of large and mid-cap stocks across 23 developed markets. In compliance with the UCITS Regulations, the relative VaR of the Fund’s portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund’s Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term and seeking protection of the value of their initial investment at certain percentages of the Initial Offer Price up to the Target Date and who are willing to accept a moderate to high level of volatility.

Base Currency: Euro

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	From 05 September 2023 to 05 September 2023	Euro	No	Up to 2%	€100/ €100	Accumulating
Class D Acc	€100	From 05 September 2023 to 05 September 2023	Euro	No	No	€500 / €100	Accumulating
Class A Acc	€100	From 05 September 2023 to 05 September 2023	Euro	No	No	€100/ €100	Accumulating
Class A Dist	€100	From 05 September 2023 to 05 September 2023	Euro	No	No	€100/ €100	Distributing
Class A1 Dist	€100	From 05 September 2023 to 05 September 2023	Euro	No	No	€5,000,000 / €100	Distributing

*Class D Shares in the Fund shall only be made available for subscription to such entities or persons as the Manager may determine from time to time in its absolute discretion.

During the Initial Offer Period, Shares are available for subscription at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading “Fees and Expenses”.

Manager’s Fee

The Manager shall be entitled to a fee of up to 1.85% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator’s Fee

Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee

Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge

Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding, in which case, in order to avoid double charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs

The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors at their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus. In particular, investors should take the following risk factors into account: "General Risks", "Investment Risk", "Liquidity Risk", "Redemption Risk", "Credit Risk", "Currency Risk", "Share Currency Designation Risk", "Risks Affect Specific Issuers", "Derivatives Risk", "Investing in Fixed Income Securities", "Below Investment Grade Credit Risk", "Changes in Interest Rates", "Investment in Exchange Traded Funds (ETFs)", "Additional Risks Applicable to Underlying Funds" and "Sustainable Finance Risks". Nevertheless, such list is not deemed to be exhaustive and therefore investors are recommended to familiarise themselves with all risk factors described in the above-mentioned section of the Prospectus.

GLOBAL DEFENCE TARGET PASSIVE FINECO AM FUND

SUPPLEMENT DATED 23 JULY 2024

This Supplement contains specific information in relation to **Global Defence Target Passive Fineco AM Fund** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus of FAM Evolution ICAV dated 01 December 2022 and the addendum thereto (together the "Prospectus").

The Fund may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed nor a capital protected product. In seeking to achieve its investment objective, the Fund will at times, as described in greater detail below, invest directly or indirectly in a diversified portfolio of instruments and may enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund may bear credit risk in respect of its portfolio of instruments so that if one or more of the issuers of any of those instruments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day	means every Wednesday or if a particular Wednesday is not a day on which retail banks and securities markets in Luxembourg are normally open for business, the next following day on which retail banks and securities markets in Luxembourg are normally open for business.
Target Date	16 July 2029
Subscription Period	means from 15 May 2024 to 9 July 2024 or such longer or shorter period, as may be determined by the Directors in accordance with the requirements of the Central Bank.
Dealing Deadline	means 11.59am (Irish time) one day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates up to the Target Date.
Dividend Payment Dates	Means, 16 July 2025, 16 July 2026, 15 July 2027, 17 July 2028 and 16 July 2029 or, if one of these dates is not a Business Day, the next day which is a Business Day.

Investment Objective and Policies

The investment objective of the Fund is to seek to achieve long-term capital appreciation and a dividend on each Dividend Payment Date, up to the Target Date.

The Fund is organised in such a manner that encompasses three distinct phases of the Fund, as explained in the subsequent subsections.

Phase 1: During the Subscription Period

During the Subscription Period, the Manager will invest principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

The reason for having a Subscription Period is to have a short period during which the Fund will accept subscriptions and invest them in a manner designed to seek to achieve a positive investment return whilst maintaining liquidity for the Fund. After the Subscription Period subscriptions into the Fund are no longer accepted. Although the Fund will be closed for subscriptions after the Subscription Period, requests for redemptions received prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day (i.e. each Business Day) in accordance with the section of the Prospectus entitled **"**Redemption of Shares".

Selection of direct investments

The instruments that may be part of the Initial Strategies will be selected based on the Manager's top-down analysis, which includes a view on the global investment outlook and analysis of market opportunities and securities based on an assessment of factors such as income yield, credit risk and bond duration. The Manager will assess each individual security and the bond markets to understand the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the securities under assessment. Following such credit assessment, the Manager appraises a potential investment in a security in terms of relative value when compared to other securities that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which instruments to acquire on behalf of the Fund. When an investment is made, it will be closely monitored by the Manager taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such instrument will be kept under review by the Manager. The Manager may invest substantially or fully in government bonds issued by any Member State.

As part of the Initial Strategies, the Fund may use the financial derivative instruments listed in the section of this Supplement headed "Types of Financial Derivative Instruments".

Phase 2: After the Subscription Period and up to the Target Date

Following the Subscription Period, the Fund will gradually reduce its allocation to the Initial Strategies up to the Target Date in the following manner:

1. It is anticipated that following the last day of the Subscription Period, and on a quarterly basis, the Fund's asset allocation to the Initial Strategies will reduce by 5 % of the Fund's assets. Each reduction will be followed by a corresponding investment by the Fund in the Longer Term Strategies (described at point 2 below)(the "Averaging Out").

   The Averaging Out process will occur every quarter following the last day of the Subscription Period for 60 months up to the Target Date. At the Target Date the Fund will be fully invested in the Longer Term Strategies.

   The Manager, based on their discretion, can alter the percentage disclosed above by decelerating or accelerating the reduction to the Initial Strategies according to their view of market conditions and to mitigate the risk of short-term price fluctuations in the market at or around each quarter period end. The Manager's view on market conditions will be informed by a proprietary quantitative model designed by the Manager which is described below (the "Quant Model") and/or by qualitative considerations that include macroeconomic conditions, valuations and risk sentiment.

This analysis of market conditions will inform the Manager as to whether and by how much they should accelerate or decelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies.

The proprietary Quant Model allows the Manager assess market conditions using quantifiable, definitive and numerical data that can be used for checking portfolio return robustness via historical simulations; i.e. it is analysis on documented and definitive information on the past performance of the relevant market. It is based on technical and market indicators such as the relative strength index which analyses the historical strength or weakness of a stock or market based on closing prices of a recent trading period.

2. As described above, every quarter following the last day of the Subscription Period, the exposure to the Initial Strategies will be reduced and an exposure will be obtained to a diversified portfolio of Underlying Funds as described in detail immediately below (the "Longer Term Strategies"). The Longer Term Strategies are made up of Underlying Funds that provide the Fund with a mixed exposure to certain asset classes while respecting the investment limits outlined below. This means that as part of the Longer Term Strategies the Fund:

    (1) may invest principally in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world;

    (2) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate;

    (3) may invest up to 15% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and

    (4) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

At the time of purchase of the debt securities either directly or via Underlying Funds, the Fund may only have a maximum exposure of 30% of its Net Asset Value to non-Investment Grade debt securities. Where a debt security ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security either directly or indirectly via Underlying Funds.

Selection of Underlying Funds

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which may make up the Initial Strategies and will make up the Longer Term Strategies.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in money market instruments, equity and debt securities' markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the

relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest in Underlying Funds which have a low cost such as passive index-tracking funds, for example ETF products and have a preference to invest in such low cost Underlying Funds.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

Any Fund assets directly held by the Fund (i.e. not held through Underlying Funds) will be listed or traded on Recognised Markets as set out in Schedule I of the Prospectus entitled "Recognised Markets". For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

The Fund may also invest directly up to 10% of its Net Asset Value in exchange traded commodities ("ETCs") being instruments that give investors indirect exposure to commodities in the form of certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movements of commodities – such as oil, gold and silver or a basket of commodities – and fluctuate in value based on the underlying commodity(ies).

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in alternative investment funds ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Phase 3: After the Target Date

At the Target Date, it is expected (subject to the Manager's discretion as disclosed above) that the Fund will be fully invested in the Longer Term Strategies.

This gradual exposure of Shareholders to the Longer Term Strategies allows Shareholders obtain a diversified exposure to the market while neutralizing the effect of short-term price fluctuations in the broader market.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or over the counter ("OTC") FDI for hedging, risk reduction, or investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDI, please refer to the "Risk Factors" section of the Prospectus.

Types of Financial Derivative Instruments

(i) futures contracts on dividends, bonds, interest rates, equity securities/basket of equity securities, equity/fixed income indices, or basket of equity/fixed income indices;
(ii) forwards on currencies and/or bonds;
(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices, (iii) futures;
(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, inflation-linked swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and
(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i) –(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio exposure. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities, equity indices or a basket of equity indices in order to provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value. When the Fund is using futures in these circumstances, the Fund would be taking a short position for risk reduction.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking such actions, the Fund may increase the duration of the Fund's bond portfolio exposure. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a

bond rises as interest rates fall. The Fund may engage in an interest rate swap transaction with the same purpose This strategy can be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit (i.e. the purchase and sale of an asset in order to profit from a difference in the asset's price between markets whilst ensuring that prices do not deviate substantially from fair value for long periods of time), to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use options and forwards on currencies ("FX forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce riskas described in detail in this paragraph.

Forwards

The Fund may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets which the Fund may hold or which the Fund may wish to buy.

Interest Rate Futures and Interest Rate Swaps

The Fund may use interest rate futures or interest rate swaps in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When interest rate futures or swaps are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market – based premium) in order to seek to protect the Fund against interest rate increases, reflecting the

Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

Inflation-linked Swaps

The Fund may use inflation-linked swaps to manage the inflation exposure and/or to mitigate the impact of inflation rate fluctuations on the Fund's portfolio. Unlike inflation swaps that involve exchange of payments at a fixed or floating rate in return for payments based on realized inflation, inflation-linked swaps involve payments that are directly tied to an inflation index, such as the Consumer Price Index (CPI).These payments adjust automatically in response to changes in the inflation rate. This mechanism provides the Fund with a dynamic tool to mitigate the impact of inflation rate fluctuations on the portfolio and to adapt its exposure based on anticipated inflation movements. Inflation-linked swaps may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

TRS

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivatives Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement – Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the MSCI World Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. The Index is an equity index designed to represent the performance of large and mid-cap stocks across 23 developed markets. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 350% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term and who wish to receive income up to the Target Date and who are willing to accept a moderate to high level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund

to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Dist	€100	From 15 May 2024 to 15 May 2024	Euro	No	No	€100 / €100	Distributing
Class A 1 Dist	€100	From 15 May 2024 to 15 May 2024	Euro	No	No	€5,000,000 / €100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a fee of up to 1.50 % per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

GLOBAL DEFENCE TARGET PASSIVE FINECO AM FUND II

SUPPLEMENT DATED 19 JULY 2024

This Supplement contains specific information in relation to **Global Defence Target Passive Fineco AM Fund II** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus of FAM Evolution ICAV dated 01 December 2022 and the addendum thereto (together the "Prospectus").

The Fund may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed nor a capital protected product. In seeking to achieve its investment objective, the Fund will at times, as described in greater detail below, invest directly or indirectly in a diversified portfolio of instruments and may enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund may bear credit risk in respect of its portfolio of instruments so that if one or more of the issuers of any of those instruments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day	means every Wednesday or if a particular Wednesday is not a day on which retail banks and securities markets in Luxembourg are normally open for business, the next following day on which retail banks and securities markets in Luxembourg are normally open for business.
Target Date	16 October 2029
Subscription Period	means from 23 July 2024 to 1 October 2024 or such longer or shorter period, as may be determined by the Directors in accordance with the requirements of the Central Bank.
Dealing Deadline	means 11.59am (Irish time) one day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates up to the Target Date.
Dividend Payment Dates	Means, 16 October 2025, 16 October 2026, 15 October 2027, 15 October 2028 and 16 October 2029 or, if one of these dates is not a Business Day, the next day which is a Business Day.

Investment Objective and Policies

The investment objective of the Fund is to seek to achieve long-term capital appreciation and a dividend on each Dividend Payment Date, up to the Target Date.

The Fund is organised in such a manner that encompasses three distinct phases of the Fund, as explained in the subsequent subsections.

Phase 1: During the Subscription Period

During the Subscription Period, the Manager will invest principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

The reason for having a Subscription Period is to have a short period during which the Fund will accept subscriptions and invest them in a manner designed to seek to achieve a positive investment return whilst maintaining liquidity for the Fund. After the Subscription Period subscriptions into the Fund are no longer accepted. Although the Fund will be closed for subscriptions after the Subscription Period, requests for redemptions received prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day (i.e. each Business Day) in accordance with the section of the Prospectus entitled **"**Redemption of Shares".

Selection of direct investments

The instruments that may be part of the Initial Strategies will be selected based on the Manager's top-down analysis, which includes a view on the global investment outlook and analysis of market opportunities and securities based on an assessment of factors such as income yield, credit risk and bond duration. The Manager will assess each individual security and the bond markets to understand the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the securities under assessment. Following such credit assessment, the Manager appraises a potential investment in a security in terms of relative value when compared to other securities that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which instruments to acquire on behalf of the Fund. When an investment is made, it will be closely monitored by the Manager taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such instrument will be kept under review by the Manager. The Manager may invest substantially or fully in government bonds issued by any Member State.

As part of the Initial Strategies, the Fund may use the financial derivative instruments listed in the section of this Supplement headed "Types of Financial Derivative Instruments".

Phase 2: After the Subscription Period and up to the Target Date

Following the Subscription Period, the Fund will gradually reduce its allocation to the Initial Strategies up to the Target Date in the following manner:

1. It is anticipated that following the last day of the Subscription Period, and on a quarterly basis, the Fund's asset allocation to the Initial Strategies will reduce by 5 % of the Fund's assets. Each reduction will be followed by a corresponding investment by the Fund in the Longer Term Strategies (described at point 2 below)(the "Averaging Out").

   The Averaging Out process will occur every quarter following the last day of the Subscription Period for 60 months up to the Target Date. At the Target Date the Fund will be fully invested in the Longer Term Strategies.

   The Manager, based on their discretion, can alter the percentage disclosed above by decelerating or accelerating the reduction to the Initial Strategies according to their view of market conditions and to mitigate the risk of short-term price fluctuations in the market at or around each quarter period end. The Manager's view on market conditions will be informed by a proprietary quantitative model designed by the Manager which is described below (the "Quant Model") and/or by qualitative considerations that include macroeconomic conditions, valuations and risk sentiment.

This analysis of market conditions will inform the Manager as to whether and by how much they should accelerate or decelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies.

The proprietary Quant Model allows the Manager assess market conditions using quantifiable, definitive and numerical data that can be used for checking portfolio return robustness via historical simulations; i.e. it is analysis on documented and definitive information on the past performance of the relevant market. It is based on technical and market indicators such as the relative strength index which analyses the historical strength or weakness of a stock or market based on closing prices of a recent trading period.

2. As described above, every quarter following the last day of the Subscription Period, the exposure to the Initial Strategies will be reduced and an exposure will be obtained to a diversified portfolio of Underlying Funds as described in detail immediately below (the "Longer Term Strategies"). The Longer Term Strategies are made up of Underlying Funds that provide the Fund with a mixed exposure to certain asset classes while respecting the investment limits outlined below. This means that as part of the Longer Term Strategies the Fund:

    (1) may invest principally in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world;

    (2) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate;

    (3) may invest up to 15% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and

    (4) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

At the time of purchase of the debt securities either directly or via Underlying Funds, the Fund may only have a maximum exposure of 30% of its Net Asset Value to non-Investment Grade debt securities. Where a debt security ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security either directly or indirectly via Underlying Funds.

Selection of Underlying Funds

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which may make up the Initial Strategies and will make up the Longer Term Strategies.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in money market instruments, equity and debt securities' markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the

relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest in Underlying Funds which have a low cost such as passive index-tracking funds, for example ETF products and have a preference to invest in such low cost Underlying Funds.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

Any Fund assets directly held by the Fund (i.e. not held through Underlying Funds) will be listed or traded on Recognised Markets as set out in Schedule I of the Prospectus entitled "Recognised Markets". For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

The Fund may also invest directly up to 10% of its Net Asset Value in exchange traded commodities ("ETCs") being instruments that give investors indirect exposure to commodities in the form of certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movements of commodities – such as oil, gold and silver or a basket of commodities – and fluctuate in value based on the underlying commodity(ies).

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in alternative investment funds ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Phase 3: After the Target Date

At the Target Date, it is expected (subject to the Manager's discretion as disclosed above) that the Fund will be fully invested in the Longer Term Strategies.

This gradual exposure of Shareholders to the Longer Term Strategies allows Shareholders obtain a diversified exposure to the market while neutralizing the effect of short-term price fluctuations in the broader market.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or over the counter ("OTC") FDI for hedging, risk reduction, or investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDI, please refer to the "Risk Factors" section of the Prospectus.

Types of Financial Derivative Instruments

(i) futures contracts on dividends, bonds, interest rates, equity securities/basket of equity securities, equity/fixed income indices, or basket of equity/fixed income indices;
(ii) forwards on currencies and/or bonds;
(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices, (iii) futures;
(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, inflation-linked swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and
(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i) –(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio exposure. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities, equity indices or a basket of equity indices in order to provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value. When the Fund is using futures in these circumstances, the Fund would be taking a short position for risk reduction.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking such actions, the Fund may increase the duration of the Fund's bond portfolio exposure. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a

bond rises as interest rates fall. The Fund may engage in an interest rate swap transaction with the same purpose This strategy can be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit (i.e. the purchase and sale of an asset in order to profit from a difference in the asset's price between markets whilst ensuring that prices do not deviate substantially from fair value for long periods of time), to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use options and forwards on currencies ("FX forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce riskas described in detail in this paragraph.

Forwards

The Fund may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets which the Fund may hold or which the Fund may wish to buy.

Interest Rate Futures and Interest Rate Swaps

The Fund may use interest rate futures or interest rate swaps in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When interest rate futures or swaps are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market – based premium) in order to seek to protect the Fund against interest rate increases, reflecting the

Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

Inflation-linked Swaps

The Fund may use inflation-linked swaps to manage the inflation exposure and/or to mitigate the impact of inflation rate fluctuations on the Fund's portfolio. Unlike inflation swaps that involve exchange of payments at a fixed or floating rate in return for payments based on realized inflation, inflation-linked swaps involve payments that are directly tied to an inflation index, such as the Consumer Price Index (CPI).These payments adjust automatically in response to changes in the inflation rate. This mechanism provides the Fund with a dynamic tool to mitigate the impact of inflation rate fluctuations on the portfolio and to adapt its exposure based on anticipated inflation movements. Inflation-linked swaps may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

TRS

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivatives Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement – Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the MSCI World Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. The Index is an equity index designed to represent the performance of large and mid-cap stocks across 23 developed markets. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 350% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term and who wish to receive income up to the Target Date and who are willing to accept a moderate to high level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund

to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Dist	€100	From 22 July 2024 to 22 July 2024	Euro	No	No	€100 / €100	Distributing
Class A 1 Dist	€100	From 22 July 2024 to 22 July 2024	Euro	No	No	€5,000,000 / €100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a fee of up to 1.50 % per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

FINECO AM PASSIVE UNDERLYINGS 9

SUPPLEMENT DATED 28 AUGUST 2024

This Supplement contains specific information in relation to **Fineco AM Passive Underlyings 9** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 01 December 2022 and the addendum thereto (together, the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Investment Objective and Policies

The investment objective of the Fund is to achieve long-term capital appreciation.

The Fund seeks to achieve its investment objective by investing its Net Asset Value in units of a diversified portfolio of Underlying Funds. The Fund: (1) may invest principally in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world; (2) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate; (3) may invest up to 15% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and (4) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

Asset allocation of the Fund will rotate over time depending on prevailing market conditions, i.e. the Manager will adjust the mix of investments, mentioned above, that the Fund holds based on the application of the investment selection analysis described below to the given market that such investments are in at a given point in time. This Fund will not have any particular industry or geographic focus.

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in global equity markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment

under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest in Underlying Funds which have a low cost such as passive index-tracking funds, for example ETF products, and have a preference to invest in such low cost Underlying Funds.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

The Fund may also invest up to 7.5% of its Net Asset Value in exchange traded commodities ("ETCs") being instruments that give investors indirect exposure to commodities in the form of certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movements of commodities - such as oil, gold and silver or a basket of commodities - and fluctuate in value based on the underlying commodity(ies). ETCs will be used by the Fund to gain indirect exposure to gold only. While such investment is mainly for the purposes of managing risk and protecting the value of the portfolio, it may be used for investment purposes in certain market conditions (e.g. in times of inflation). Exposure could potentially be through ETCs and/or through the Underlying Funds referred to under (3) above.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in non-UCITS (so-called "alternative investment funds"), therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain

or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the MSCI ACWI Net Total Return EUR Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term who are willing to accept a high level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to either high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks;

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class L Acc	€100	From 29 August 2024 to 29 August 2024	Euro	No	Yes/3 %	€1,000 / €100	Accumulating
Class A Acc	€100	From 29 August 2024 to 29 August 2024	Euro	No	No	€1,000 / €100	Accumulating
Class A1 Acc	€100	From 29 August 2024 to 29 August 2024	Euro	No	No	€5,000,000/€100	Accumulating

During the Initial Offer Period Shares are available for subscription at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Definitions

Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of the Fund:

"Dealing Deadline" means 1:30pm (Irish time) on the Business Day prior to the relevant Dealing Day.

"Valuation Point" means 11.59pm (Irish time) on the relevant Dealing Day.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 1.50% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Sales Charge
Up to 3% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common

management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

GLOBAL DEFENCE TARGET PASSIVE FINECO AM FUND III

SUPPLEMENT DATED 7 NOVEMBER 2024

This Supplement contains specific information in relation to **Global Defence Target Passive Fineco AM Fund III** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus of FAM Evolution ICAV dated 01 December 2022 and the addendum thereto (together the "Prospectus").

The Fund may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed nor a capital protected product. In seeking to achieve its investment objective, the Fund will at times, as described in greater detail below, invest directly or indirectly in a diversified portfolio of instruments and may enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund may bear credit risk in respect of its portfolio of instruments so that if one or more of the issuers of any of those instruments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day	means every Wednesday or if a particular Wednesday is not a day on which retail banks and securities markets in Luxembourg are normally open for business, the next following day on which retail banks and securities markets in Luxembourg are normally open for business.
Target Date	18 January 2030
Subscription Period	means from 11 November 2024 to 14 January 2025 or such longer or shorter period, as may be determined by the Directors in accordance with the requirements of the Central Bank.
Dealing Deadline	means 11.59am (Irish time) one day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates up to the Target Date.
Dividend Payment Dates	Means, 21 January 2026, 20 January 2027, 19 January 2028, 17 January 2029 and 16 January 2030 or, if one of these dates is not a Business Day, the next day which is a Business Day.

Investment Objective and Policies

The investment objective of the Fund is to seek to achieve long-term capital appreciation and a dividend on each Dividend Payment Date, up to the Target Date.

The Fund is organised in such a manner that encompasses three distinct phases of the Fund, as explained in the subsequent subsections.

Phase 1: During the Subscription Period

During the Subscription Period, the Manager will invest principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

The reason for having a Subscription Period is to have a short period during which the Fund will accept subscriptions and invest them in a manner designed to seek to achieve a positive investment return whilst maintaining liquidity for the Fund. After the Subscription Period subscriptions into the Fund are no longer accepted. Although the Fund will be closed for subscriptions after the Subscription Period, requests for redemptions received prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day (i.e. each Business Day) in accordance with the section of the Prospectus entitled **"**Redemption of Shares".

Selection of direct investments

The instruments that may be part of the Initial Strategies will be selected based on the Manager's top-down analysis, which includes a view on the global investment outlook and analysis of market opportunities and securities based on an assessment of factors such as income yield, credit risk and bond duration. The Manager will assess each individual security and the bond markets to understand the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the securities under assessment. Following such credit assessment, the Manager appraises a potential investment in a security in terms of relative value when compared to other securities that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which instruments to acquire on behalf of the Fund. When an investment is made, it will be closely monitored by the Manager taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such instrument will be kept under review by the Manager. The Manager may invest substantially or fully in government bonds issued by any Member State.

As part of the Initial Strategies, the Fund may use the financial derivative instruments listed in the section of this Supplement headed "Types of Financial Derivative Instruments".

Phase 2: After the Subscription Period and up to the Target Date

Following the Subscription Period, the Fund will gradually reduce its allocation to the Initial Strategies up to the Target Date in the following manner:

1. It is anticipated that following the last day of the Subscription Period, and on a quarterly basis, the Fund's asset allocation to the Initial Strategies will reduce by 5 % of the Fund's assets. Each reduction will be followed by a corresponding investment by the Fund in the Longer Term Strategies (described at point 2 below)(the "Averaging Out").

   The Averaging Out process will occur every quarter following the last day of the Subscription Period for 60 months up to the Target Date. At the Target Date the Fund will be fully invested in the Longer Term Strategies.

   The Manager, based on their discretion, can alter the percentage disclosed above by decelerating or accelerating the reduction to the Initial Strategies according to their view of market conditions and to mitigate the risk of short-term price fluctuations in the market at or around each quarter period end. The Manager's view on market conditions will be informed by a proprietary quantitative model designed by the Manager which is described below (the "Quant Model") and/or by qualitative considerations that include macroeconomic conditions, valuations and risk sentiment.

This analysis of market conditions will inform the Manager as to whether and by how much they should accelerate or decelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies.

The proprietary Quant Model allows the Manager assess market conditions using quantifiable, definitive and numerical data that can be used for checking portfolio return robustness via historical simulations; i.e. it is analysis on documented and definitive information on the past performance of the relevant market. It is based on technical and market indicators such as the relative strength index which analyses the historical strength or weakness of a stock or market based on closing prices of a recent trading period.

2. As described above, every quarter following the last day of the Subscription Period, the exposure to the Initial Strategies will be reduced and an exposure will be obtained to a diversified portfolio of Underlying Funds as described in detail immediately below (the "Longer Term Strategies"). The Longer Term Strategies are made up of Underlying Funds that provide the Fund with a mixed exposure to certain asset classes while respecting the investment limits outlined below. This means that as part of the Longer Term Strategies the Fund:

    (1) may invest principally in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world;

    (2) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate;

    (3) may invest up to 15% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and

    (4) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

At the time of purchase of the debt securities either directly or via Underlying Funds, the Fund may only have a maximum exposure of 30% of its Net Asset Value to non-Investment Grade debt securities. Where a debt security ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security either directly or indirectly via Underlying Funds.

Selection of Underlying Funds

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which may make up the Initial Strategies and will make up the Longer Term Strategies.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in money market instruments, equity and debt securities' markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the

relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and
- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest in Underlying Funds which have a low cost such as passive index-tracking funds, for example ETF products and have a preference to invest in such low cost Underlying Funds.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

Any Fund assets directly held by the Fund (i.e. not held through Underlying Funds) will be listed or traded on Recognised Markets as set out in Schedule I of the Prospectus entitled "Recognised Markets". For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

The Fund may also invest directly up to 10% of its Net Asset Value in exchange traded commodities ("ETCs") being instruments that give investors indirect exposure to commodities in the form of certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movements of commodities – such as oil, gold and silver or a basket of commodities – and fluctuate in value based on the underlying commodity(ies).

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in alternative investment funds ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Phase 3: After the Target Date

At the Target Date, it is expected (subject to the Manager's discretion as disclosed above) that the Fund will be fully invested in the Longer Term Strategies.

This gradual exposure of Shareholders to the Longer Term Strategies allows Shareholders obtain a diversified exposure to the market while neutralizing the effect of short-term price fluctuations in the broader market.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or over the counter ("OTC") FDI for hedging, risk reduction, or investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDI, please refer to the "Risk Factors" section of the Prospectus.

Types of Financial Derivative Instruments

(i) futures contracts on dividends, bonds, interest rates, equity securities/basket of equity securities, equity/fixed income indices, or basket of equity/fixed income indices;
(ii) forwards on currencies and/or bonds;
(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices, (iii) futures;
(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, inflation-linked swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and
(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i) –(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio exposure. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities, equity indices or a basket of equity indices in order to provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value. When the Fund is using futures in these circumstances, the Fund would be taking a short position for risk reduction.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking such actions, the Fund may increase the duration of the Fund's bond portfolio exposure. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a

bond rises as interest rates fall. The Fund may engage in an interest rate swap transaction with the same purpose This strategy can be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit (i.e. the purchase and sale of an asset in order to profit from a difference in the asset's price between markets whilst ensuring that prices do not deviate substantially from fair value for long periods of time), to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets
e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use options and forwards on currencies ("FX forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce riskas described in detail in this paragraph.

Forwards

The Fund may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets which the Fund may hold or which the Fund may wish to buy.

Interest Rate Futures and Interest Rate Swaps

The Fund may use interest rate futures or interest rate swaps in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When interest rate futures or swaps are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market – based premium) in order to seek to protect the Fund against interest rate increases, reflecting the

Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

Inflation-linked Swaps

The Fund may use inflation-linked swaps to manage the inflation exposure and/or to mitigate the impact of inflation rate fluctuations on the Fund's portfolio. Unlike inflation swaps that involve exchange of payments at a fixed or floating rate in return for payments based on realized inflation, inflation-linked swaps involve payments that are directly tied to an inflation index, such as the Consumer Price Index (CPI). These payments adjust automatically in response to changes in the inflation rate. This mechanism provides the Fund with a dynamic tool to mitigate the impact of inflation rate fluctuations on the portfolio and to adapt its exposure based on anticipated inflation movements. Inflation-linked swaps may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

TRS

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivatives Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement – Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the MSCI World Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. The Index is an equity index designed to represent the performance of large and mid-cap stocks across 23 developed markets. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 350% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term and who wish to receive income up to the Target Date and who are willing to accept a moderate to high level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Dist	€100	From 8 November 2024 to 8 November 2024	Euro	No	No	€100 / €100	Distributing
Class A1 Dist	€100	From 8 November 2024 to 8 November 2024	Euro	No	No	€5,000,000 / €100	Distributing
Class L Dist	€100	From 8 November 2024 to 8 November 2024	Euro	No	Up to 2%	€100 / €100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a fee of up to 1.50 % per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

TARGET EQUITY ALLOCATION FINECO AM FUND

SUPPLEMENT DATED 06 DECEMBER 2024

This Supplement contains specific information in relation to **Target Equity Allocation Fineco AM Fund** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus of FAM Evolution ICAV dated 01 December 2022 and the addendum thereto (together the "Prospectus").

The Fund may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed nor a capital protected product. In seeking to achieve its investment objective, the Fund will at times, as described in greater detail below, invest directly or indirectly in a diversified portfolio of instruments and may enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund may bear credit risk in respect of its portfolio of instruments so that if one or more of the issuers of any of those instruments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day	means every Wednesday or if a particular Wednesday is not a day on which retail banks and securities markets in Luxembourg are normally open for business, the next following day on which retail banks and securities markets in Luxembourg are normally open for business.
Money Market/ Short Term Instruments	includes but is not limited to investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities of all types (including corporate debt securities, bonds and notes, zero- coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Underlying Funds which provide exposure to the above instruments.
Maturity Date	07 February 2035.
Subscription Period	means from 10 December 2024 to 04 February 2025 or such longer or shorter period, as may be determined by the Directors in accordance with the requirements of the Central Bank.
Dealing Deadline	means 11.59am (Irish time) one day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.

Debt Instruments*:* includes Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero- coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Investment Objective and Policies

The investment objective of the Fund is to seek to achieve long-term capital appreciation.

I. Debt Instruments Portfolio

The Fund will seek to achieve its investment objective by investing principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Debt Instruments Portfolio").

Selection of direct investments

The instruments that may be part of the Debt Instruments Portfolio will be selected based on the Manager's top-down analysis, which includes a view on the global investment outlook and analysis of market opportunities and securities based on an assessment of factors such as income yield, credit risk and bond duration. The Manager will assess each individual security and the bond markets to understand the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the securities under assessment. Following such credit assessment, the Manager appraises a potential investment in a security in terms of relative value when compared to other securities that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which instruments to acquire on behalf of the Fund. When an investment is made, it will be closely monitored by the Manager taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such instrument will be kept under review by the Manager. The Manager may invest substantially or fully in government bonds issued by any Member State.

The Fund may use the financial derivative instruments listed in the section of this Supplement headed "Types of Financial Derivative Instruments".

II. Exposure to equity instruments

the Fund may use part or all of the return it receives from the purchase of the Debt Instruments Portfolio described above (and may also use any cash it may hold that was not used to purchase of such instruments) to invest directly in equity instruments and/or gain an exposure indirectly to equity instruments, via units of Underlying Funds and/or FDI such as total return swaps.

Equity instruments may comprise equity securities/basket of equity securities, equity indices, or basket of equity indices.

The Manager will use its own proprietary quantitative investment process and/or a qualitative analysis for the purpose of determining which equity instruments to gain exposure either directly or indirectly, as described above. The Manager will consider the following criteria as part of its qualitative and quantitative analysis for direct equity investments:

Quantitative analysis

a) Quality: Quality companies are characterized as companies with durable business models (meaning companies with stable production/manufacturing capabilities and recurring revenues) and sustainable competitive advantages. Quality companies tend to have high return of equity, stable earnings that are less correlated with the broad business cycle, and strong balance sheets with low financial leverage.

b) Value: Value companies are characterized as companies with attractive fundamental ratios such as forward price to earnings ratio, free cash flow yield and price to book value.

c) Momentum: Momentum companies are characterised as companies which show a continuing positive stock price trend over certain time horizons.

d) Minimum Volatility: Minimum Volatility companies are characterised by low historical volatility of the stock price.

Qualitative analysis

The Manager will look to the current macroeconomic situation, as it relates to the sectors and countries in the investable region. Macroeconomic analysis involves research of the ratios of individual countries' economies with particular attention regarding growth, country risk profile, price and consumer indices.

At the time of purchase of the debt securities either directly or via Underlying Funds, the Fund may only have a maximum exposure of 30% of its Net Asset Value to non-Investment Grade debt securities. Where a debt security ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security either directly or indirectly via Underlying Funds.

Selection of Underlying Funds
The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which may be invested in.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in money market instruments, equity and debt securities' markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and
- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such

- qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest in Underlying Funds which have a low cost such as passive index-tracking funds, for example ETF products and have a preference to invest in such low cost Underlying Funds.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. Any Fund assets directly held by the Fund (i.e. not held through Underlying Funds) will be listed or traded on Recognised Markets as set out in Schedule I of the Prospectus entitled "Recognised Markets". For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

Underlying Funds
The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in alternative investment funds ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus.

III. After the Maturity Date

After the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

Approaching the Maturity Date, based on market conditions at the time and the view of the Manager, the ICAV may also determine that there is an opportunity for Shareholders to benefit from an extended period of investment in the Fund. In such case, it may notify the Shareholders in writing that said Maturity Date shall be extended by a number of years.

A written notification would then be sent to each Shareholder at that time stating that each Shareholder may redeem out of the Fund on specified Dealing Days shortly before the Maturity Date is reached with any payment due to such Shareholders at the Maturity Date being payable to them on or around that date. Such notice would also provide the option for Shareholders to leave their investment in the Fund and remain as a Shareholder, in which case the Fund would continue with a new Maturity Date and the investment objective referring to that new Maturity Date. Should the ICAV wish to extend the Maturity Date, the Supplement would be updated and the new proposed Maturity Date set out in the notice and submitted for Central Bank noting. The key features of the extension would also be set out in the notice to Shareholders to enable them to make an informed decision on whether they wish to remain invested in the Fund.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or over the counter ("OTC") FDI for hedging, risk reduction, or investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDI, please refer to the "Risk Factors" section of the Prospectus.

Types of Financial Derivative Instruments

(i) futures contracts on dividends, bonds, interest rates, equity securities/basket of equity securities, equity/fixed income indices, or basket of equity/fixed income indices;
(ii) forwards on currencies and/or bonds;
(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices, (iii) futures;
(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, inflation-linked swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and
(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i) –(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio exposure. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities, equity indices or a basket of equity indices in order to provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value. When the Fund is using futures in these circumstances, the Fund would be taking a short position for risk reduction.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking such actions, the Fund may increase the duration of the Fund's bond portfolio exposure. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall. The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit (i.e. the purchase and sale of an asset in order to profit from a difference in the asset's price between markets whilst ensuring that prices do not deviate substantially from fair value for long periods of time), to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use options and forwards on currencies ("FX forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce riskas described in detail in this paragraph.

Forwards

The Fund may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets which the Fund may hold or which the Fund may wish to buy.

Interest Rate Futures and Interest Rate Swaps

The Fund may use interest rate futures or interest rate swaps in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When interest rate futures or swaps are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market – based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

Inflation-linked Swaps

The Fund may use inflation-linked swaps to manage the inflation exposure and/or to mitigate the impact of inflation rate fluctuations on the Fund's portfolio. Unlike inflation swaps that involve exchange of payments at a fixed or floating rate in return for payments based on realized inflation, inflation-linked swaps involve payments that are directly tied to an inflation index, such as the Consumer Price Index (CPI).These payments adjust automatically in response to changes in the inflation rate. This mechanism provides the Fund with a dynamic tool to mitigate the impact of inflation rate fluctuations on the portfolio and to adapt its exposure based on anticipated inflation movements. Inflation-linked swaps may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

TRS

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivatives Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement – Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the MSCI World Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. The Index is an equity index designed to represent the performance of large and mid-cap stocks across 23 developed markets. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 350% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term and who are willing to accept a moderate to high level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Acc	€100	From 09 December 2024 to 09 December 2024	Euro	No	No	€100 / €100	Accumulating

Class A 1 Acc	€100	From 09 December 2024 to 09 December 2024	Euro	No	No	€5,000,000 / €100	Accumulating
Class L Acc	€100	From 09 December 2024 to 09 December 2024	Euro	No	Up to 2%	€100 / €100	Accumulating

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a fee of up to 1.50 % per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double- charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

GLOBAL DEFENCE TARGET PASSIVE FINECO AM FUND IV

SUPPLEMENT DATED 10 JANUARY 2025

This Supplement contains specific information in relation to **Global Defence Target Passive Fineco AM Fund IV** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus of FAM Evolution ICAV dated 01 December 2022 and the addendum thereto (together the "Prospectus").

The Fund may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed nor a capital protected product. In seeking to achieve its investment objective, the Fund will at times, as described in greater detail below, invest directly or indirectly in a diversified portfolio of instruments and may enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund may bear credit risk in respect of its portfolio of instruments so that if one or more of the issuers of any of those instruments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day	means every Wednesday or if a particular Wednesday is not a day on which retail banks and securities markets in Luxembourg are normally open for business, the next following day on which retail banks and securities markets in Luxembourg are normally open for business.
Target Date	5 April 2030
Subscription Period	means from 28 January 2025 to 25 March 2025 or such longer or shorter period, as may be determined by the Directors in accordance with the requirements of the Central Bank.
Dealing Deadline	means 11.59am (Irish time) one day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates up to the Target Date.
Dividend Payment Dates	Means, 1 April 2026, 31 March 2027, 5 April 2028, 4 April 2029 and 3 April 2030 or, if one of these dates is not a Business Day, the next day which is a Business Day.

Investment Objective and Policies

The investment objective of the Fund is to seek to achieve long-term capital appreciation and a dividend on each Dividend Payment Date, up to the Target Date.

The Fund is organised in such a manner that encompasses three distinct phases of the Fund, as explained in the subsequent subsections.

Phase 1: During the Subscription Period

During the Subscription Period, the Manager will invest principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

The reason for having a Subscription Period is to have a short period during which the Fund will accept subscriptions and invest them in a manner designed to seek to achieve a positive investment return whilst maintaining liquidity for the Fund. After the Subscription Period subscriptions into the Fund are no longer accepted. Although the Fund will be closed for subscriptions after the Subscription Period, requests for redemptions received prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day (i.e. each Business Day) in accordance with the section of the Prospectus entitled **"**Redemption of Shares".

Selection of direct investments

The instruments that may be part of the Initial Strategies will be selected based on the Manager's top-down analysis, which includes a view on the global investment outlook and analysis of market opportunities and securities based on an assessment of factors such as income yield, credit risk and bond duration. The Manager will assess each individual security and the bond markets to understand the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the securities under assessment. Following such credit assessment, the Manager appraises a potential investment in a security in terms of relative value when compared to other securities that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which instruments to acquire on behalf of the Fund. When an investment is made, it will be closely monitored by the Manager taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such instrument will be kept under review by the Manager. The Manager may invest substantially or fully in government bonds issued by any Member State.

As part of the Initial Strategies, the Fund may use the financial derivative instruments listed in the section of this Supplement headed "Types of Financial Derivative Instruments".

Phase 2: After the Subscription Period and up to the Target Date

Following the Subscription Period, the Fund will gradually reduce its allocation to the Initial Strategies up to the Target Date in the following manner:

1. It is anticipated that following the last day of the Subscription Period, and on a quarterly basis, the Fund's asset allocation to the Initial Strategies will reduce by 5 % of the Fund's assets. Each reduction will be followed by a corresponding investment by the Fund in the Longer Term Strategies (described at point 2 below)(the "Averaging Out").

   The Averaging Out process will occur every quarter following the last day of the Subscription Period for 60 months up to the Target Date. At the Target Date the Fund will be fully invested in the Longer Term Strategies.

   The Manager, based on their discretion, can alter the percentage disclosed above by decelerating or accelerating the reduction to the Initial Strategies according to their view of market conditions and to mitigate the risk of short-term price fluctuations in the market at or around each quarter period end. The Manager's view on market conditions will be informed by a proprietary quantitative model designed by the Manager which is described below (the "Quant Model") and/or by qualitative considerations that include macroeconomic conditions, valuations and risk sentiment.

This analysis of market conditions will inform the Manager as to whether and by how much they should accelerate or decelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies.

The proprietary Quant Model allows the Manager assess market conditions using quantifiable, definitive and numerical data that can be used for checking portfolio return robustness via historical simulations; i.e. it is analysis on documented and definitive information on the past performance of the relevant market. It is based on technical and market indicators such as the relative strength index which analyses the historical strength or weakness of a stock or market based on closing prices of a recent trading period.

2. As described above, every quarter following the last day of the Subscription Period, the exposure to the Initial Strategies will be reduced and an exposure will be obtained to a diversified portfolio of Underlying Funds as described in detail immediately below (the "Longer Term Strategies"). The Longer Term Strategies are made up of Underlying Funds that provide the Fund with a mixed exposure to certain asset classes while respecting the investment limits outlined below. This means that as part of the Longer Term Strategies the Fund:

    (1) may invest principally in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world. The types of equities the Fund may become exposed to, through its investments in Underlying Funds, include a broad range of large-cap, mid-cap, and small-cap equity securities. These may represent various sectors, geographic regions, or investment themes, in alignment with the specific investment strategies of the selected Underlying Funds;

    (2) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate;

    (3) may invest up to 15% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and

    (4) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

At the time of purchase of the debt securities either directly or via Underlying Funds, the Fund may only have a maximum exposure of 30% of its Net Asset Value to non-Investment Grade debt securities. Where a debt security ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security either directly or indirectly via Underlying Funds.

Selection of Underlying Funds

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which may make up the Initial Strategies and will make up the Longer Term Strategies.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in money market instruments, equity and debt securities' markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the

relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and
- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest in Underlying Funds which have a low cost such as passive index-tracking funds, for example ETF products and have a preference to invest in such low cost Underlying Funds.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

Any Fund assets directly held by the Fund (i.e. not held through Underlying Funds) will be listed or traded on Recognised Markets as set out in Schedule I of the Prospectus entitled "Recognised Markets". For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

The Fund may also invest directly up to 10% of its Net Asset Value in exchange traded commodities ("ETCs") being instruments that give investors indirect exposure to commodities in the form of certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movements of commodities – such as oil, gold and silver or a basket of commodities – and fluctuate in value based on the underlying commodity(ies).

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in alternative investment funds ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Phase 3: After the Target Date

At the Target Date, it is expected (subject to the Manager's discretion as disclosed above) that the Fund will be fully invested in the Longer Term Strategies.

This gradual exposure of Shareholders to the Longer Term Strategies allows Shareholders obtain a diversified exposure to the market while neutralizing the effect of short-term price fluctuations in the broader market.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or over the counter ("OTC") FDI for hedging, risk reduction, or investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDI, please refer to the "Risk Factors" section of the Prospectus.

Types of Financial Derivative Instruments

(i) futures contracts on dividends, bonds, interest rates, equity securities/basket of equity securities, equity/fixed income indices, or basket of equity/fixed income indices;
(ii) forwards on currencies and/or bonds;
(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices, (iii) futures;
(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, inflation-linked swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and
(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i) –(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio exposure. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities, equity indices or a basket of equity indices in order to provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value. When the Fund is using futures in these circumstances, the Fund would be taking a short position for risk reduction.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking such actions, the Fund may increase the duration of the Fund's bond portfolio exposure. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a

bond rises as interest rates fall. The Fund may engage in an interest rate swap transaction with the same purpose This strategy can be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit (i.e. the purchase and sale of an asset in order to profit from a difference in the asset's price between markets whilst ensuring that prices do not deviate substantially from fair value for long periods of time), to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets
e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use options and forwards on currencies ("FX forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce riskas described in detail in this paragraph.

Forwards

The Fund may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets which the Fund may hold or which the Fund may wish to buy.

Interest Rate Futures and Interest Rate Swaps

The Fund may use interest rate futures or interest rate swaps in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When interest rate futures or swaps are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market – based premium) in order to seek to protect the Fund against interest rate increases, reflecting the

Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

Inflation-linked Swaps

The Fund may use inflation-linked swaps to manage the inflation exposure and/or to mitigate the impact of inflation rate fluctuations on the Fund's portfolio. Unlike inflation swaps that involve exchange of payments at a fixed or floating rate in return for payments based on realized inflation, inflation-linked swaps involve payments that are directly tied to an inflation index, such as the Consumer Price Index (CPI).These payments adjust automatically in response to changes in the inflation rate. This mechanism provides the Fund with a dynamic tool to mitigate the impact of inflation rate fluctuations on the portfolio and to adapt its exposure based on anticipated inflation movements. Inflation-linked swaps may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

TRS

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivatives Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement – Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the MSCI World Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. The Index is an equity index designed to represent the performance of large and mid-cap stocks across 23 developed markets. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 350% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term and who wish to receive income up to the Target Date and who are willing to accept a moderate to high level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Dist	€100	From 13 January 2025 to 27 January 2025	Euro	No	No	€100 / €100	Distributing
Class A1 Dist	€100	From 13 January 2025 to 27 January 2025	Euro	No	No	€5,000,000 / €100	Distributing
Class L Dist	€100	From 13 January 2025 to 27 January 2025	Euro	No	Up to 2%	€100 / €100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a fee of up to 1.50 % per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

TARGET EQUITY ALLOCATION FINECO AM FUND II

SUPPLEMENT DATED 28 JANUARY 2025

This Supplement contains specific information in relation to **Target Equity Allocation Fineco AM Fund II** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset- management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus of FAM Evolution ICAV dated 01 December 2022 and the addendum thereto (together the "Prospectus").

The Fund may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed nor a capital protected product. In seeking to achieve its investment objective, the Fund will at times, as described in greater detail below, invest directly or indirectly in a diversified portfolio of instruments and may enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund may bear credit risk in respect of its portfolio of instruments so that if one or more of the issuers of any of those instruments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day	means every Wednesday or if a particular Wednesday is not a day on which retail banks and securities markets in Luxembourg are normally open for business, the next following day on which retail banks and securities markets in Luxembourg are normally open for business.
Money Market/ Short Term Instruments	includes investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero- coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Underlying Funds which provide exposure to the above instruments.
Maturity Date	4 May 2035.
Subscription Period	means from 11 February 2025 to 22 April 2025 or such longer or shorter period, as may be determined by the Directors in accordance with the requirements of the Central Bank.
Dealing Deadline	means 11.59am (Irish time) one day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.

Debt Instruments*:* includes Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Investment Objective and Policies

The investment objective of the Fund is to seek to achieve long-term capital appreciation.

I. Debt Instruments Portfolio

The Fund will seek to achieve its investment objective by investing principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Debt Instruments Portfolio").

Selection of direct investments

The instruments that may be part of the Debt Instruments Portfolio will be selected based on the Manager's top-down analysis, which includes a view on the global investment outlook and analysis of market opportunities and securities based on an assessment of factors such as income yield, credit risk and bond duration. The Manager will assess each individual security and the bond markets to understand the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the securities under assessment. Following such credit assessment, the Manager appraises a potential investment in a security in terms of relative value when compared to other securities that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which instruments to acquire on behalf of the Fund. When an investment is made, it will be closely monitored by the Manager taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such instrument will be kept under review by the Manager. The Manager may invest substantially or fully in government bonds issued by any Member State.

The Fund may use the financial derivative instruments listed in the section of this Supplement headed "Types of Financial Derivative Instruments".

II. Exposure to equity instruments

the Fund may use part or all of the return it receives from the purchase of the Debt Instruments Portfolio described above (and may also use any cash it may hold that was not used to purchase of such instruments) to invest directly in equity instruments and/or gain an exposure indirectly to equity instruments, via units of Underlying Funds and/or FDI such as total return swaps.

Equity instruments may comprise equity securities/basket of equity securities, equity indices, or basket of equity indices.

The Manager will use its own proprietary quantitative investment process and/or a qualitative analysis for the purpose of determining which equity instruments to gain exposure either directly or indirectly, as described above. The Manager will consider the following criteria as part of its qualitative and quantitative analysis for direct equity investments:

Quantitative analysis

a) Quality: Quality companies are characterized as companies with durable business models (meaning companies with stable production/manufacturing capabilities and recurring revenues) and sustainable competitive advantages. Quality companies tend to have high return of equity, stable earnings that are less correlated with the broad business cycle, and strong balance sheets with low financial leverage.

b) Value: Value companies are characterized as companies with attractive fundamental ratios such as forward price to earnings ratio, free cash flow yield and price to book value.

c) Momentum: Momentum companies are characterised as companies which show a continuing positive stock price trend over certain time horizons.

d) Minimum Volatility: Minimum Volatility companies are characterised by low historical volatility of the stock price.

Qualitative analysis

The Manager will look to the current macroeconomic situation, as it relates to the sectors and countries in the investable region. Macroeconomic analysis involves research of the ratios of individual countries' economies with particular attention regarding growth, country risk profile, price and consumer indices.

At the time of purchase of the debt securities either directly or via Underlying Funds, the Fund may only have a maximum exposure of 30% of its Net Asset Value to non-Investment Grade debt securities. Where a debt security ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security either directly or indirectly via Underlying Funds.

Selection of Underlying Funds
The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which may be invested in.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in money market instruments, equity and debt securities' markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and
- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such

- qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest in Underlying Funds which have a low cost such as passive index-tracking funds, for example ETF products and have a preference to invest in such low cost Underlying Funds.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. Any Fund assets directly held by the Fund (i.e. not held through Underlying Funds) will be listed or traded on Recognised Markets as set out in Schedule I of the Prospectus entitled "Recognised Markets". For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

Underlying Funds
The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in alternative investment funds ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus.

III. After the Maturity Date

After the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

Approaching the Maturity Date, based on market conditions at the time and the view of the Manager, the ICAV may also determine that there is an opportunity for Shareholders to benefit from an extended period of investment in the Fund. In such case, it may notify the Shareholders in writing that said Maturity Date shall be extended by a number of years.

A written notification would then be sent to each Shareholder at that time stating that each Shareholder may redeem out of the Fund on specified Dealing Days shortly before the Maturity Date is reached with any payment due to such Shareholders at the Maturity Date being payable to them on or around that date. Such notice would also provide the option for Shareholders to leave their investment in the Fund and remain as a Shareholder, in which case the Fund would continue with a new Maturity Date and the investment objective referring to that new Maturity Date. Should the ICAV wish to extend the Maturity Date, the Supplement would be updated and the new proposed Maturity Date set out in the notice and submitted for Central Bank noting. The key features of the extension would also be set out in the notice to Shareholders to enable them to make an informed decision on whether they wish to remain invested in the Fund.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or over the counter ("OTC") FDI for hedging, risk reduction, or investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDI, please refer to the "Risk Factors" section of the Prospectus.

Types of Financial Derivative Instruments

(i) futures contracts on dividends, bonds, interest rates, equity securities/basket of equity securities, equity/fixed income indices, or basket of equity/fixed income indices;
(ii) forwards on currencies and/or bonds;
(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices, (iii) futures;
(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, inflation-linked swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and
(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i) –(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio exposure. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities, equity indices or a basket of equity indices in order to provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value. When the Fund is using futures in these circumstances, the Fund would be taking a short position for risk reduction.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking such actions, the Fund may increase the duration of the Fund's bond portfolio exposure. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall. The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit (i.e. the purchase and sale of an asset in order to profit from a difference in the asset's price between markets whilst ensuring that prices do not deviate substantially from fair value for long periods of time), to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use options and forwards on currencies ("FX forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce riskas described in detail in this paragraph.

Forwards

The Fund may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets which the Fund may hold or which the Fund may wish to buy.

Interest Rate Futures and Interest Rate Swaps

The Fund may use interest rate futures or interest rate swaps in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When interest rate futures or swaps are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market – based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

Inflation-linked Swaps

The Fund may use inflation-linked swaps to manage the inflation exposure and/or to mitigate the impact of inflation rate fluctuations on the Fund's portfolio. Unlike inflation swaps that involve exchange of payments at a fixed or floating rate in return for payments based on realized inflation, inflation-linked swaps involve payments that are directly tied to an inflation index, such as the Consumer Price Index (CPI).These payments adjust automatically in response to changes in the inflation rate. This mechanism provides the Fund with a dynamic tool to mitigate the impact of inflation rate fluctuations on the portfolio and to adapt its exposure based on anticipated inflation movements. Inflation-linked swaps may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

TRS

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivatives Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement – Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the MSCI World Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. The Index is an equity index designed to represent the performance of large and mid-cap stocks across 23 developed markets. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 350% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term and who are willing to accept a moderate to high level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Acc	€100	From 29 January 2025 to 10 February 2025	Euro	No	No	€100 / €100	Accumulating

Class A 1 Acc	€100	From 29 January 2025 to 10 February 2025	Euro	No	No	€5,000,000 / €100	Accumulating
Class L Acc	€100	From 29 January 2025 to 10 February 2025	Euro	No	Up to 1%	€100 / €100	Accumulating

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a fee of up to 1.50 % per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 1% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double- charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

TARGET EQUITY ALLOCATION FINECO AM FUND III

SUPPLEMENT DATED 1 MAY 2025

This Supplement contains specific information in relation to **Target Equity Allocation Fineco AM Fund III** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset- management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus of FAM Evolution ICAV dated 01 December 2022 and the addendum thereto (together the "Prospectus").

The Fund may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed nor a capital protected product. In seeking to achieve its investment objective, the Fund will at times, as described in greater detail below, invest directly or indirectly in a diversified portfolio of instruments and may enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund may bear credit risk in respect of its portfolio of instruments so that if one or more of the issuers of any of those instruments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day	means every Wednesday or if a particular Wednesday is not a day on which retail banks and securities markets in Luxembourg are normally open for business, the next following day on which retail banks and securities markets in Luxembourg are normally open for business.
Money Market/ Short Term Instruments	includes investments in cash, treasury bills, commercial paper, certificates of deposit, short term fixed- and/or any kind of floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero- coupon and discount bonds, debentures) denominated in any currency issued by sovereign, government agencies, supranational entities and/or corporate issuers and/or investment in other Underlying Funds which provide exposure to the above instruments.
Maturity Date	13 July 2035.
Subscription Period	means from 7 May 2025 to 8 July 2025 or such longer or shorter period, as may be determined by the Directors in accordance with the requirements of the Central Bank.
Dealing Deadline	means 11.59am (Irish time) one day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.

Debt Instruments: includes Investment Grade and/or non-Investment Grade fixed and/or floating rate transferable debt securities (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures, inflation linked bonds, subordinated debt securities) denominated in any currency and issued, owned or guaranteed by sovereign or government agencies, supranational entities and/or corporate issuers located anywhere in the world (including emerging markets), mainly listed or traded on a Recognised Markets listed in Schedule I of the Prospectus.

Investment Objective and Policies

The investment objective of the Fund is to seek to achieve long-term capital appreciation.

I. Debt Instruments Portfolio

The Fund will seek to achieve its investment objective by investing principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Debt Instruments Portfolio").

Selection of direct investments

The instruments that may be part of the Debt Instruments Portfolio will be selected based on the Manager's top-down analysis, which includes a view on the global investment outlook and analysis of market opportunities and securities based on an assessment of factors such as income yield, credit risk and bond duration. The Manager will assess each individual security and the bond markets to understand the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the securities under assessment. Following such credit assessment, the Manager appraises a potential investment in a security in terms of relative value when compared to other securities that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which instruments to acquire on behalf of the Fund. When an investment is made, it will be closely monitored by the Manager taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such instrument will be kept under review by the Manager. The Manager may invest substantially or fully in government bonds issued by any Member State.

The Fund may use the financial derivative instruments listed in the section of this Supplement headed "Types of Financial Derivative Instruments".

II. Exposure to equity instruments

The Fund may use part or all of the return it receives from the purchase of the Debt Instruments Portfolio described above (and may also use any cash it may hold that was not used to purchase of such instruments) to invest directly in equity instruments and/or gain an exposure indirectly to equity instruments, via units of Underlying Funds and/or FDI such as total return swaps.

Equity instruments may comprise equity securities/basket of equity securities, equity indices, or basket of equity indices.

The Manager will use its own proprietary quantitative investment process and/or a qualitative analysis for the purpose of determining which equity instruments to gain exposure either directly or indirectly, as described above. The Manager will consider the following criteria as part of its qualitative and quantitative analysis for direct equity investments:

Quantitative analysis

a) Quality: Quality companies are characterized as companies with durable business models (meaning companies with stable production/manufacturing capabilities and recurring revenues) and sustainable competitive advantages. Quality companies tend to have high return of equity, stable earnings that are less correlated with the broad business cycle, and strong balance sheets with low financial leverage.

b) Value: Value companies are characterized as companies with attractive fundamental ratios such as forward price to earnings ratio, free cash flow yield and price to book value.

c) Momentum: Momentum companies are characterised as companies which show a continuing positive stock price trend over certain time horizons.

d) Minimum Volatility: Minimum Volatility companies are characterised by low historical volatility of the stock price.

Qualitative analysis

The Manager will look to the current macroeconomic situation, as it relates to the sectors and countries in the investable region. Macroeconomic analysis involves research of the ratios of individual countries' economies with particular attention regarding growth, country risk profile, price and consumer indices.

At the time of purchase of the debt securities either directly or via Underlying Funds, the Fund may only have a maximum exposure of 30% of its Net Asset Value to non-Investment Grade debt securities. Where a debt security ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security either directly or indirectly via Underlying Funds.

Selection of Underlying Funds
The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which may be invested in.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in money market instruments, equity and debt securities' markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and
- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such

- qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest in Underlying Funds which have a low cost such as passive index-tracking funds, for example ETF products and have a preference to invest in such low cost Underlying Funds.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution. Any Fund assets directly held by the Fund (i.e. not held through Underlying Funds) will be listed or traded on Recognised Markets as set out in Schedule I of the Prospectus entitled "Recognised Markets". For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in alternative investment funds ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus.

III. After the Maturity Date

After the Maturity Date, the Fund may invest principally in Debt Instruments and/or Money Market/Short Term Instruments.

Approaching the Maturity Date, based on market conditions at the time and the view of the Manager, the ICAV may also determine that there is an opportunity for Shareholders to benefit from an extended period of investment in the Fund. In such case, it may notify the Shareholders in writing that said Maturity Date shall be extended by a number of years.

A written notification would then be sent to each Shareholder at that time stating that each Shareholder may redeem out of the Fund on specified Dealing Days shortly before the Maturity Date is reached with any payment due to such Shareholders at the Maturity Date being payable to them on or around that date. Such notice would also provide the option for Shareholders to leave their investment in the Fund and remain as a Shareholder, in which case the Fund would continue with a new Maturity Date and the investment objective referring to that new Maturity Date. Should the ICAV wish to extend the Maturity Date, the Supplement would be updated and the new proposed Maturity Date set out in the notice and submitted for Central Bank noting. The key features of the extension would also be set out in the notice to Shareholders to enable them to make an informed decision on whether they wish to remain invested in the Fund.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or over the counter ("OTC") FDI for hedging, risk reduction, or investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDI, please refer to the "Risk Factors" section of the Prospectus.

Types of Financial Derivative Instruments

(i) futures contracts on dividends, bonds, interest rates, equity securities/basket of equity securities, equity/fixed income indices, or basket of equity/fixed income indices;
(ii) forwards on currencies and/or bonds;
(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices, (iii) futures;
(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, inflation-linked swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and
(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i) –(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio exposure. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities, equity indices or a basket of equity indices in order to provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value. When the Fund is using futures in these circumstances, the Fund would be taking a short position for risk reduction.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking such actions, the Fund may increase the duration of the Fund's bond portfolio exposure. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall. The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit (i.e. the purchase and sale of an asset in order to profit from a difference in the asset's price between markets whilst ensuring that prices do not deviate substantially from fair value for long periods of time), to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use options and forwards on currencies ("FX forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce riskas described in detail in this paragraph.

Forwards

The Fund may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets which the Fund may hold or which the Fund may wish to buy.

Interest Rate Futures and Interest Rate Swaps

The Fund may use interest rate futures or interest rate swaps in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When interest rate futures or swaps are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market – based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

Inflation-linked Swaps

The Fund may use inflation-linked swaps to manage the inflation exposure and/or to mitigate the impact of inflation rate fluctuations on the Fund's portfolio. Unlike inflation swaps that involve exchange of payments at a fixed or floating rate in return for payments based on realized inflation, inflation-linked swaps involve payments that are directly tied to an inflation index, such as the Consumer Price Index (CPI).These payments adjust automatically in response to changes in the inflation rate. This mechanism provides the Fund with a dynamic tool to mitigate the impact of inflation rate fluctuations on the portfolio and to adapt its exposure based on anticipated inflation movements. Inflation-linked swaps may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

TRS

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivatives Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement – Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the MSCI World Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. The Index is an equity index designed to represent the performance of large and mid-cap stocks across 23 developed markets. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 350% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term and who are willing to accept a moderate to high level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Acc	€100	From 2 May 2025 to 6 May 2025	Euro	No	No	€100 / €100	Accumulating

Class A 1 Acc	€100	From 2 May 2025 to 6 May 2025	Euro	No	No	€5,000,000 / €100	Accumulating
Class L Acc	€100	From 2 May 2025 to 6 May 2025	Euro	No	Up to 1%	€100 / €100	Accumulating

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a fee of up to 1.50 % per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 1% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double- charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

EQUITY CONTROLS FINECO AM FUND

SUPPLEMENT DATED 21 OCTOBER 2025

This Supplement contains specific information in relation to Equity Controls Fineco AM Fund (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus of FAM Evolution ICAV dated 01 December 2022 and the addendum thereto (together the "Prospectus").

The Fund may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed nor a capital protected product. In seeking to achieve its investment objective, the Fund will at times, as described in greater detail below, invest directly or indirectly in a diversified portfolio of instruments and may enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund may bear credit risk in respect of its portfolio of instruments so that if one or more of the issuers of any of those instruments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Initial Offer Period	The Initial Offer Period for a Share Class will start at 9:00 AM (Irish time) on the first date disclosed in the table under "Offer of Shares" and will close at 5:00 PM (Irish time) on the second date disclosed. The Initial Offer Period may be shortened or extended by the Directors, and the Central Bank will be notified of any such shortening or extension. During the Initial Offer Period, Shares will be available for subscription at an initial offer price of €100.00 per Share ("Initial Offer Price").
Dealing Deadline	means 11.59am (Irish time) on the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.1% of the Initial Offer Price, being the minimum dividend which the Fund is aiming to pay on the Dividend Payment Dates.
Dividend Payment Dates	Means 3 June 2026, 2 June 2027, 7 June 2028, 6 June 2029, 5 June 2030, 4 June 2031 and/or any other dates as may be determined by the Directors and notified to Shareholders in advance.

Investment Objective and Policies

The investment objective of the Fund is to seek to achieve long-term capital appreciation and a dividend on each Dividend Payment Date.

The Manager will invest principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities such as senior unsecured and secured bonds, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

The instruments that may be part of the Initial Strategies will be selected based on the Manager's top-down analysis, which includes a view on the global investment outlook and analysis of market opportunities and securities based on an assessment of factors such as income yield, credit risk and bond duration. The Manager will assess each individual security and the bond markets to understand the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the securities under assessment. Following such credit assessment, the Manager appraises a potential investment in a security in terms of relative value when compared to other securities that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which instruments to acquire on behalf of the Fund. When an investment is made, it will be closely monitored by the Manager taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such instrument will be kept under review by the Manager. The Manager may invest substantially or fully in government bonds issued by any Member State.

The Fund's asset allocation to the Initial Strategies will be reduced over time. Each reduction will be followed by a corresponding investment by the Fund in the Longer Term Strategies (as described below).

The Manager, based on their discretion, will reduce the exposure to the Initial Strategies to the extent considered appropriate according to their view of market conditions. The Manager's view on market conditions will be informed by a proprietary quantitative model designed by the Manager which is described below (the "Quant Model") and/or by qualitative considerations that include macroeconomic conditions, valuations and risk sentiment.

The proprietary Quant Model allows the Manager assess market conditions using quantifiable, definitive and numerical data that can be used for checking portfolio return robustness via historical simulations; i.e. it is analysis on documented and definitive information on the past performance of the relevant market. It is based on technical and market indicators such as the relative strength index which analyses the historical strength or weakness of a stock or market based on closing prices of a recent trading period.

As described above, the exposure to the Initial Strategies will be reduced and an exposure will be obtained to a diversified portfolio of equity instruments, such as equity securities/basket of equity securities, equity indices, or basket of equity indices, and/or Underlying Funds as described in detail immediately below (the "Longer Term Strategies"). The Longer Term Strategies are made up of direct equity investments and indirect investments via units of Underlying Funds that provide the Fund with a mixed exposure to certain asset classes while respecting the investment limits outlined below. This means that as part of the Longer Term Strategies the Fund:

1) may invest principally in equity instruments and/or units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world. The types of equities the Fund may become exposed to, through its investments either directly or indirectly via Underlying Funds, include a broad range of large-cap, mid-cap, and small-cap equity securities. These may represent various sectors, geographic regions, or investment themes such as technological advancements, in which companies drive innovation in fields like biotechnology, cybersecurity, artificial intelligence, and energy transition providing exposure to key areas of technological development;

2) may invest up to 20% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non- Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate;

3) may invest up to 15% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and

4) may invest up to 20% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

At the time of purchase of the debt securities either directly or via Underlying Funds, the Fund may only have a maximum exposure of 30% of its Net Asset Value to non-Investment Grade debt securities. Where a debt security ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security either directly or indirectly via Underlying Funds.

As part of the Initial Strategies and Longer Term Strategies, the Fund may use the financial derivative instruments listed in the section of this Supplement headed "Types of Financial Derivative Instruments.

Selection of Underlying Funds
The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which may make up the Initial Strategies and the Longer Term Strategies.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in money market instruments, equity and debt securities' markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade -off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager may also look to invest in Underlying Funds which have a low cost such as passive index-tracking funds, for example ETF products and have a preference to invest in such low cost Underlying Funds.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

Any Fund assets directly held by the Fund (i.e. not held through Underlying Funds) will be listed or traded on Recognised Markets as set out in Schedule I of the Prospectus entitled "Recognised Markets". For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in alternative investment funds ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or over the counter ("OTC") FDI for hedging, risk reduction, or investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDI, please refer to the "Risk Factors" section of the Prospectus.

Types of Financial Derivative Instruments

(i) futures contracts on dividends, bonds, interest rates, equity securities/basket of equity securities, equity/fixed income indices, or basket of equity/fixed income indices;
(ii) forwards on currencies and/or bonds;
(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices, (iii) futures;
(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, inflation-linked swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and
(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i) –(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in

accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio exposure. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities, equity indices or a basket of equity indices in order to provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value. When the Fund is using futures in these circumstances, the Fund would be taking a short position for risk reduction.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking such actions, the Fund may increase the duration of the Fund's bond portfolio exposure. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall. The Fund may engage in an interest rate swap transaction with the same purpose This strategy can be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit (i.e. the purchase and sale of an asset in order to profit from a difference in the asset's price between markets whilst ensuring that prices do not deviate substantially from fair value for long periods of time), to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use options and forwards on currencies ("FX forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter

the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risks described in detail in this paragraph.

Forwards

The Fund may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets which the Fund may hold or which the Fund may wish to buy.

Interest Rate Futures and Interest Rate Swaps

The Fund may use interest rate futures or interest rate swaps in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When interest rate futures or swaps are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market – based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

Inflation-linked Swaps

The Fund may use inflation-linked swaps to manage the inflation exposure and/or to mitigate the impact of inflation rate fluctuations on the Fund's portfolio. Unlike inflation swaps that involve exchange of payments at a fixed or floating rate in return for payments based on realized inflation, inflation-linked swaps involve payments that are directly tied to an inflation index, such as the Consumer Price Index (CPI). These payments adjust automatically in response to changes in the inflation rate. This mechanism provides the Fund with a dynamic tool to mitigate the impact of inflation rate fluctuations on the portfolio and to adapt its exposure based on anticipated inflation movements. Inflation-linked swaps may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a

default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

TRS

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 100% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivatives Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement – Global Exposure and Leverage

Global exposure is calculated using the commitment approach. Global exposure and leverage as a result of FDIs, as measured using the commitment approach, shall not exceed 100% of the Fund's Net Asset Value.

Investor Profile
The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term and who wish to receive income and who are willing to accept a moderate to high level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks;

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk); and

(iii) The Manager also applies its basic exclusion policy to direct investments whereby potential investments are removed from the prospective investment universe on the basis that they pose a too great Sustainability Risk. The Manager's exclusion policy may be obtained on the Manager's website at: http://finecoassetmanagement.com/sustainability/.

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Dist	€100	From 22 October 2025 to 26 April 2026	Euro	No	No	€100 / €100	Distributing
Class A1 Dist	€100	From 22 October 2025 to 26 April 2026	Euro	No	No	€5,000,000 / €100	Distributing
Class L Dist	€100	Closed	Euro	No	Up to 2%	€100 / €100	Distributing
Class A Acc	€100	From 22 October 2025 to 26 April 2026	Euro	No	No	€100 / €100	Accumulating

Class L Acc	€100	From 22 October 2025 to 26 April 2026	Euro	No	Up to 1%	€100 / €100	Accumulating

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a fee of up to 1.50% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 2% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

GLOBAL DEFENCE TARGET PASSIVE FINECO AM FUND V

SUPPLEMENT DATED 30 APRIL 2025

This Supplement contains specific information in relation to **Global Defence Target Passive Fineco AM Fund V** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus of FAM Evolution ICAV dated 01 December 2022 and the addendum thereto (together the "Prospectus").

The Fund may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed nor a capital protected product. In seeking to achieve its investment objective, the Fund will at times, as described in greater detail below, invest directly or indirectly in a diversified portfolio of instruments and may enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund may bear credit risk in respect of its portfolio of instruments so that if one or more of the issuers of any of those instruments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day	means every Wednesday or if a particular Wednesday is not a day on which retail banks and securities markets in Luxembourg are normally open for business, the next following day on which retail banks and securities markets in Luxembourg are normally open for business.
Target Date	19 July 2030
Subscription Period	means from 7 May 2025 to 8 July 2025 or such longer or shorter period, as may be determined by the Directors in accordance with the requirements of the Central Bank.
Dealing Deadline	means 11.59am (Irish time) one day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates up to the Target Date.
Dividend Payment Dates	Means, 15 July 2026, 14 July 2027, 19 July 2028, 18 July 2029 and 17 July 2030 or, if one of these dates is not a Business Day, the next day which is a Business Day.

Investment Objective and Policies

The investment objective of the Fund is to seek to achieve long-term capital appreciation and a dividend on each Dividend Payment Date, up to the Target Date.

The Fund is organised in such a manner that encompasses three distinct phases of the Fund, as explained in the subsequent subsections.

Phase 1: During the Subscription Period

During the Subscription Period, the Manager will invest principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

The reason for having a Subscription Period is to have a short period during which the Fund will accept subscriptions and invest them in a manner designed to seek to achieve a positive investment return whilst maintaining liquidity for the Fund. After the Subscription Period subscriptions into the Fund are no longer accepted. Although the Fund will be closed for subscriptions after the Subscription Period, requests for redemptions received prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day (i.e. each Business Day) in accordance with the section of the Prospectus entitled **"**Redemption of Shares".

Selection of direct investments

The instruments that may be part of the Initial Strategies will be selected based on the Manager's top-down analysis, which includes a view on the global investment outlook and analysis of market opportunities and securities based on an assessment of factors such as income yield, credit risk and bond duration. The Manager will assess each individual security and the bond markets to understand the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the securities under assessment. Following such credit assessment, the Manager appraises a potential investment in a security in terms of relative value when compared to other securities that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which instruments to acquire on behalf of the Fund. When an investment is made, it will be closely monitored by the Manager taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such instrument will be kept under review by the Manager. The Manager may invest substantially or fully in government bonds issued by any Member State.

As part of the Initial Strategies, the Fund may use the financial derivative instruments listed in the section of this Supplement headed "Types of Financial Derivative Instruments".

Phase 2: After the Subscription Period and up to the Target Date

Following the Subscription Period, the Fund will gradually reduce its allocation to the Initial Strategies up to the Target Date in the following manner:

1. It is anticipated that following the last day of the Subscription Period, and on a quarterly basis, the Fund's asset allocation to the Initial Strategies will reduce by 5 % of the Fund's assets. Each reduction will be followed by a corresponding investment by the Fund in the Longer Term Strategies (described at point 2 below)(the "Averaging Out").

   The Averaging Out process will occur every quarter following the last day of the Subscription Period for 60 months up to the Target Date. At the Target Date the Fund will be fully invested in the Longer Term Strategies.

   The Manager, based on their discretion, can alter the percentage disclosed above by decelerating or accelerating the reduction to the Initial Strategies according to their view of market conditions and to mitigate the risk of short-term price fluctuations in the market at or around each quarter period end. The Manager's view on market conditions will be informed by a proprietary quantitative model designed by the Manager which is described below (the "Quant Model") and/or by qualitative considerations that include macroeconomic conditions, valuations and risk sentiment.

This analysis of market conditions will inform the Manager as to whether and by how much they should accelerate or decelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies.

The proprietary Quant Model allows the Manager assess market conditions using quantifiable, definitive and numerical data that can be used for checking portfolio return robustness via historical simulations; i.e. it is analysis on documented and definitive information on the past performance of the relevant market. It is based on technical and market indicators such as the relative strength index which analyses the historical strength or weakness of a stock or market based on closing prices of a recent trading period.

2. As described above, every quarter following the last day of the Subscription Period, the exposure to the Initial Strategies will be reduced and an exposure will be obtained to a diversified portfolio of Underlying Funds as described in detail immediately below (the "Longer Term Strategies"). The Longer Term Strategies are made up of Underlying Funds that provide the Fund with a mixed exposure to certain asset classes while respecting the investment limits outlined below. This means that as part of the Longer Term Strategies the Fund:

    (1) may invest principally in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world. The types of equities the Fund may become exposed to, through its investments in Underlying Funds, include a broad range of large-cap, mid-cap, and small-cap equity securities. These may represent various sectors, geographic regions, or investment themes, in alignment with the specific investment strategies of the selected Underlying Funds;

    (2) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate;

    (3) may invest up to 15% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and

    (4) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

At the time of purchase of the debt securities either directly or via Underlying Funds, the Fund may only have a maximum exposure of 30% of its Net Asset Value to non-Investment Grade debt securities. Where a debt security ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security either directly or indirectly via Underlying Funds.

Selection of Underlying Funds

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which may make up the Initial Strategies and will make up the Longer Term Strategies.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in money market instruments, equity and debt securities' markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the

relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and
- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest in Underlying Funds which have a low cost such as passive index-tracking funds, for example ETF products and have a preference to invest in such low cost Underlying Funds.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

Any Fund assets directly held by the Fund (i.e. not held through Underlying Funds) will be listed or traded on Recognised Markets as set out in Schedule I of the Prospectus entitled "Recognised Markets". For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

The Fund may also invest directly up to 10% of its Net Asset Value in exchange traded commodities ("ETCs") being instruments that give investors indirect exposure to commodities in the form of certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movements of commodities – such as oil, gold and silver or a basket of commodities – and fluctuate in value based on the underlying commodity(ies).

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in alternative investment funds ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Phase 3: After the Target Date

At the Target Date, it is expected (subject to the Manager's discretion as disclosed above) that the Fund will be fully invested in the Longer Term Strategies.

This gradual exposure of Shareholders to the Longer Term Strategies allows Shareholders obtain a diversified exposure to the market while neutralizing the effect of short-term price fluctuations in the broader market.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or over the counter ("OTC") FDI for hedging, risk reduction, or investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDI, please refer to the "Risk Factors" section of the Prospectus.

Types of Financial Derivative Instruments

(i) futures contracts on dividends, bonds, interest rates, equity securities/basket of equity securities, equity/fixed income indices, or basket of equity/fixed income indices;
(ii) forwards on currencies and/or bonds;
(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices, (iii) futures;
(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, inflation-linked swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and
(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i) –(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio exposure. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities, equity indices or a basket of equity indices in order to provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value. When the Fund is using futures in these circumstances, the Fund would be taking a short position for risk reduction.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking such actions, the Fund may increase the duration of the Fund's bond portfolio exposure. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a

bond rises as interest rates fall. The Fund may engage in an interest rate swap transaction with the same purpose This strategy can be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit (i.e. the purchase and sale of an asset in order to profit from a difference in the asset's price between markets whilst ensuring that prices do not deviate substantially from fair value for long periods of time), to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets
e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use options and forwards on currencies ("FX forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Forwards

The Fund may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets which the Fund may hold or which the Fund may wish to buy.

Interest Rate Futures and Interest Rate Swaps

The Fund may use interest rate futures or interest rate swaps in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When interest rate futures or swaps are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market – based premium) in order to seek to protect the Fund against interest rate increases, reflecting the

Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

Inflation-linked Swaps

The Fund may use inflation-linked swaps to manage the inflation exposure and/or to mitigate the impact of inflation rate fluctuations on the Fund's portfolio. Unlike inflation swaps that involve exchange of payments at a fixed or floating rate in return for payments based on realized inflation, inflation-linked swaps involve payments that are directly tied to an inflation index, such as the Consumer Price Index (CPI).These payments adjust automatically in response to changes in the inflation rate. This mechanism provides the Fund with a dynamic tool to mitigate the impact of inflation rate fluctuations on the portfolio and to adapt its exposure based on anticipated inflation movements. Inflation-linked swaps may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

TRS

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivatives Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement – Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the MSCI World Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. The Index is an equity index designed to represent the performance of large and mid-cap stocks across 23 developed markets. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 350% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term and who wish to receive income up to the Target Date and who are willing to accept a moderate to high level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Dist	€100	From 1 May 2025 to 6 May 2025	Euro	No	No	€100 / €100	Distributing
Class A1 Dist	€100	From 1 May 2025 to 6 May 2025	Euro	No	No	€5,000,000 / €100	Distributing
Class L Dist	€100	From 1 May 2025 to 6 May 2025	Euro	No	Up to 1%	€100 / €100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a fee of up to 1.50 % per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 1% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

FINECO AM ACTIVE PORTFOLIOS 20% EQUITY UCITS ETF

SUPPLEMENT DATED 13 August 2025

This Supplement contains specific information in relation to **FINECO AM ACTIVE PORTFOLIOS 20% EQUITY UCITS ETF** (the "Fund"), a sub- fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset- management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

Application will be made to Borsa Italiana and/or such other exchanges as the Directors may determine from time to time (the "**Relevant Stock Exchanges**") for the listing of the ETF Shares issued and available to be issued to be admitted to listing on the official list and trading on each of the Relevant Stock Exchanges on or about the launch date of the Fund. This Supplement and the Prospectus together comprise listing particulars for the purposes of listing the ETF Shares on the official list and trading on the main market of each of the Relevant Stock Exchanges.

This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 01 December 2022 and any addendum thereto (together the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Investment Objective and Policies

The investment objective of the Fund is to achieve medium to long-term capital appreciation.

The Fund seeks to achieve its investment objective by primarily investing its Net Asset Value in units of a diversified portfolio of Underlying Funds. The Fund:

(1) is expected to have an exposure of up to 20% of its Net Asset Value in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world. In response to changing market conditions, the Fund may have an exposure of up to 30% of its Net Asset Value in such Underlying Funds, resulting in short-term deviations from the 20% level. Notwithstanding such deviations, the Manager will seek to implement a reset mechanism with the aim of bringing the equity exposure back to 20% over time;
(2) may invest up to 85% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non- Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate and cash, provided that exposure to non-Investment Grade will be limited to maximum 30% of the Net Asset Value of the Fund;
(3) may invest up to 25% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and
(4) may invest up to 30% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

Asset allocation of the Fund will rotate over time depending on prevailing market conditions, i.e. the Manager will adjust the mix of investments, mentioned above, that the Fund holds based on the application of the investment selection analysis described below to the given market that such investments are in at a given point in time. Temporary fluctuations, outside of the Manager's control,

from this range may from time to time occur. However, it is expected in stable market conditions that the Fund will gain exposure to a diversified portfolio composed approximately of 20% by value of equity securities and 80% by value of fixed income securities. This Fund will not have any particular industry or geographic focus.

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in equity and debt securities' markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest predominantly in active or passive exchange-traded funds ("ETFs") or other collective investment schemes which track an index and have a preference to invest in such types of Underlying Funds.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in non-UCITS (so-called "alternative investment funds"), therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum

management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Temporary Investment Measures

The Fund may temporarily depart from the investment strategies set out above in response to the Manager's perception of extraordinary market, political or similar conditions. During these periods, and for as long as and to the extent deemed necessary by the Manager in the best interests of Shareholders, the Fund may increase its holdings of cash and ancillary liquid assets. In doing so, the Fund may succeed in avoiding losses, but may otherwise fail to achieve its investment objective.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities /basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled “Securities Financing Transactions” and further below in this Supplement under “Fees and Expenses”.

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund’s net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed “Collateral Policy”.

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements

Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 15% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund’s portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund’s portfolio is calculated daily and is measured relative to a benchmark composed of 80% of Bloomberg Euro Aggregate Index and 20% MSCI ACWI Net Total Return EUR Index (the “Index”), an index which the Manager considers is a comparable benchmark to the Fund’s portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund’s portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund’s Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the medium-to-long term who are willing to accept a low level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to either high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks;

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s) . The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The Fund may issue both ETF Shares and Non-ETF Shares. Investors should note the differences between investing in ETF Shares and Non-ETF Shares which are outlined in the sub-section titled "Description of Share Classes" within the section of the Prospectus titled "THE ICAV".

The following Classes of Shares are available for subscription:

Share Class	ETF-Non-ETF Share	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Acc	ETF Share	€10	14 August 2025 – 16 February 2026	Euro	No	No	€100 / €100	Accumulating
Class AH Acc	ETF Share	€10	14 August 2025 – 16 February 2026	Euro	No	No	€5,000,000 / €100	Accumulating
Class I Acc	Non-ETF Share	€100	14 August 2025 – 16 February 2026	Euro	No	No	€1,000,000 / €100	Accumulating
Class A Dist	ETF Share	€10	14 August 2025 – 16 February 2026	Euro	No	No	€100 / €100	Distributing
Class AH Dist	ETF Share	€10	14 August 2025 – 16 February 2026	Euro	No	No	€5,000,000 / €100	Distributing
Class I Dist	Non-ETF Share	€100	14 August 2025 – 16 February 2026	Euro	No	No	€1,000,000 / €100	Distributing

During the Initial Offer Period, Shares are available for subscription on the Primary Market at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available on the Primary Market at the prevailing Net Asset Value of each Class of Shares.

Application for ETF Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled "Application for Shares".

Applications for ETF Shares on the Primary Market may be made to the Administrator (whose details are set out in the Application Form). Applications received by the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Application for Non-ETF Shares

Full details on how to purchase Non-ETF Shares are described in the Prospectus under the section titled "Application for Shares".

Applications for Non-ETF Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Definitions

Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of the Fund:

"Dealing Deadline" means 1:30pm (Irish time) on the Business Day prior to the relevant Dealing Day.

"Valuation Point" means 11.59pm (Irish time) on the relevant Dealing Day.

"Business Day" means a day (expect Saturday or Sunday and public holidays) on which retail banks and securities markets in [London and Luxembourg] are normally open for business.

"Dealing Day" In general, each Business Day will be a Dealing Day. However, certain Business Days will not be Dealing Days where, in the sole determination of the Directors, markets on which the Fund's investments are listed or traded are closed, provided that there is at least one Dealing Day per fortnight.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 1.50% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Securities Lending Agent's Fees
The Fund will retain at least 98% of the securities lending revenue generated, with up to 2% payable to the Securities Lending Agent (and/or to any sub-agent of the Securities Lending Agent) (plus VAT, if any) as a fee to cover the activities it carries out.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

FINECO AM ACTIVE PORTFOLIOS 60% EQUITY UCITS ETF

SUPPLEMENT DATED 13 August 2025

This Supplement contains specific information in relation to **FINECO AM ACTIVE PORTFOLIOS 60% EQUITY UCITS ETF** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset- management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

Application will be made to Borsa Italiana and/or such other exchanges as the Directors may determine from time to time (the "**Relevant Stock Exchanges**") for the listing of the ETF Shares issued and available to be issued to be admitted to listing on the official list and trading on each of the Relevant Stock Exchanges on or about the launch date of the Fund. This Supplement and the Prospectus together comprise listing particulars for the purposes of listing the ETF Shares on the official list and trading on the main market of each of the Relevant Stock Exchanges.

This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 01 December 2022 and any addendum thereto (together the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Investment Objective and Policies

The investment objective of the Fund is to achieve medium to long-term capital appreciation.

The Fund seeks to achieve its investment objective by investing its Net Asset Value in units of a diversified portfolio of Underlying Funds. The Fund:

(1) is expected to have an exposure of up to 60% of its Net Asset Value in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world. In response to changing market conditions, the Fund may have an exposure of up to 70% of its Net Asset Value in such Underlying Funds, resulting in short-term deviations from the 60% level. Notwithstanding such deviations, the Manager will seek to implement a reset mechanism with the aim of bringing the equity exposure back to 60% over time; (2) may invest up to 50% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate, provided that exposure to non-Investment Grade will be limited to maximum 30% of the Net Asset Value of the Fund; (3) may invest up to 25% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and (4) may invest up to 30% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

Asset allocation of the Fund will rotate over time depending on prevailing market conditions, i.e. the Manager will adjust the mix of investments, mentioned above, that the Fund holds based on the application of the investment selection analysis described below to the given market that such investments are in at a given point in time. However, it is expected in stable market conditions that the Fund will gain exposure to a diversified portfolio composed approximately of 60% by value of equity securities and 40% by value of fixed income securities. This Fund will not have any particular industry or geographic focus.

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in global equity markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest predominantly in active or passive exchange-traded funds ("ETFs") or other collective investment schemes which track an index and have a preference to invest in such types of Underlying Funds.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in non-UCITS (so-called "alternative investment funds"), therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Temporary Investment Measures

The Fund may temporarily depart from the investment strategies set out above in response to the Manager's perception of extraordinary market, political or similar conditions. During these periods, and for as long as and to the extent deemed necessary by the Manager in the best interests of Shareholders, the Fund may increase its holdings of cash and ancillary liquid assets. In doing so, the Fund may succeed in avoiding losses, but may otherwise fail to achieve its investment objective.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates.

Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions" and further below in this Supplement under "Fees and Expenses".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements

Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 15% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to a benchmark composed of 40% of Bloomberg Euro Aggregate Bond Index and 60% MSCI ACWI Net Total Return EUR Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the medium to long term who are willing to accept a low to medium level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to either high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks;

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The Fund may issue both ETF Shares and Non-ETF Shares. Investors should note the differences between investing in ETF Shares and Non-ETF Shares which are outlined in the sub-section titled "Description of Share Classes" within the section of the Prospectus titled "THE ICAV".

The following Classes of Shares are available for subscription:

Share Class	ETF-Non-ETF share	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Acc	ETF Share	€10	14 August 2025 – 16 February 2026	Euro	No	No	€100 / €100	Accumulating
Class AH Acc	ETF Share	€10	13 August 2025 – 16 February 2026	Euro	No	No	€5,000,000 / €100	Accumulating
Class I Acc	Non-ETF Share	€100	14 August 2025 – 16 February 2026	Euro	No	No	€1,000,000 / €100	Accumulating
Class A Dist	ETF Share	€10	14 August 2025 – 16 February 2026	Euro	No	No	€100 / €100	Distributing
Class AH Dist	ETF Share	€10	14 August 2025 – 16 February 2026	Euro	No	No	€5,000,000 / €100	Distributing
Class I Dist	Non-ETF Share	€100	14 August 2025 – 16 February 2026	Euro	No	No	€1,000,000 / €100	Distributing

During the Initial Offer Period, Shares are available for subscription on the Primary Market at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available on the Primary Market at the prevailing Net Asset Value of each Class of Shares.

Application for ETF Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled “Application for Shares”.

Applications for ETF Shares on the Primary Market may be made to the Administrator (whose details are set out in the Application Form). Applications received by the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Application for Non-ETF Shares

Full details on how to purchase Non-ETF Shares are described in the Prospectus under the section titled "Application for Shares".

Applications for Non-ETF Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Definitions

Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of the Fund:

“Dealing Deadline” means 1:30pm (Irish time) on the Business Day prior to the relevant Dealing Day.

“Valuation Point” means 11.59pm (Irish time) on the relevant Dealing Day.

“**Business Day**” means a day (expect Saturday or Sunday and public holidays) on which retail banks and securities markets in London and Luxembourg are normally open for business.

“Dealing Day” In general, each Business Day will be a Dealing Day. However, certain Business Days will not be Dealing Days where, in the sole determination of the Directors, markets on which the Fund’s investments are listed or traded are closed provided that there is at least one Dealing Day per fortnight.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading “Fees and Expenses”.

Manager’s Fee
The Manager shall be entitled to a management fee of up to 1.50% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator’s Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary’s Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Securities Lending Agent's Fees
The Fund will retain at least 98% of the securities lending revenue generated, with up to 2% payable to the Securities Lending Agent (and/or to any sub-agent of the Securities Lending Agent) (plus VAT, if any) as a fee to cover the activities it carries out.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

FINECO AM ACTIVE PORTFOLIOS 100% EQUITY UCITS ETF

SUPPLEMENT DATED 13 August 2025

This Supplement contains specific information in relation to **FINECO AM ACTIVE PORTFOLIOS 100% EQUITY UCITS ETF** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset- management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

Application will be made to Borsa Italiana and/or such other exchanges as the Directors may determine from time to time (the "**Relevant Stock Exchanges**") for the listing of the ETF Shares issued and available to be issued to be admitted to listing on the official list and trading on each of the Relevant Stock Exchanges on or about the launch date of the Fund. This Supplement and the Prospectus together comprise listing particulars for the purposes of listing the ETF Shares on the official list and trading on the main market of each of the Relevant Stock Exchanges.

This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 01 December 2022 and any addendum thereto (together, the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Investment Objective and Policies

The investment objective of the Fund is to achieve medium to long-term capital appreciation.

The Fund seeks to achieve its investment objective by investing its Net Asset Value in units of a diversified portfolio of Underlying Funds. The Fund:

(1) is expected to have an exposure of up to 100% in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world; (2) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate; (3) may invest up to 15% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and (4) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

Asset allocation of the Fund will rotate over time depending on prevailing market conditions, i.e. the Manager will adjust the mix of investments, mentioned above, that the Fund holds based on the application of the investment selection analysis described below to the given market that such investments are in at a given point in time. This Fund will not have any particular industry or geographic focus.

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in global equity markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management

processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest predominantly in active or passive exchange-traded funds ("ETFs") or other collective investment schemes which track an index and have a preference to invest in such types of Underlying Funds.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in non-UCITS (so-called "alternative investment funds"), therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed [2]% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Temporary Investment Measures

The Fund may temporarily depart from the investment strategies set out above in response to the Manager's perception of extraordinary market, political or similar conditions. During these periods, and for as long as and to the extent deemed necessary by the Manager in the best interests of Shareholders, the Fund may increase its holdings of cash and ancillary liquid assets. In doing so, the Fund may succeed in avoiding losses, but may otherwise fail to achieve its investment objective.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be

used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given

underlying asset and allow the Fund to take positions on the volatility of that underlying asset.
Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions" and further below in this Supplement under "Fees and Expenses".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements

Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 15% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the MSCI ACWI Net Total Return EUR Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the medium to long term who are willing to accept a medium level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to either high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks;

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden,

material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The Fund may issue both ETF Shares and Non-ETF Shares. Investors should note the differences between investing in ETF Shares and Non-ETF Shares which are outlined in the sub-section titled "Description of Share Classes" within the section of the Prospectus titled "THE ICAV".

The following Classes of Shares are available for subscription:

Share Class	ETF-Non-ETF Share	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Acc	ETF Share	€10	14 August 2025 – 16 February 2026	Euro	No	No	€100 / €100	Accumulating
Class AH Acc	ETF Share	€10	14 August 2025 – 16 February 2026	Euro	No	No	€5,000,000/€100	Accumulating
Class I Acc	Non-ETF Share	€100	14 August 2025 – 16 February 2026	Euro	No	No	€1,000,000 / €100	Accumulating
Class A Dist	ETF Share	€10	14 August 2025 – 16 February 2026	Euro	No	No	€100 / €100	Distributing
Class AH Dist	ETF Share	€10	14 August 2025 – 16 February 2026	Euro	No	No	€5,000,000 / €100	Distributing
Class I Dist	Non-ETF Share	€100	14 August 2025 – 16 February 2026	Euro	No	No	€1,000,000 / €100	Distributing

During the Initial Offer Period Shares are available for subscription on the Primary Market at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available on the Primary Market at the prevailing Net Asset Value of each Class of Shares.

Application for ETF Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled “Application for Shares”.

Applications for ETF Shares on the Primary Market may be made to the Administrator (whose details are set out in the Application Form). Applications received by the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Application for Non-ETF Shares

Full details on how to purchase Non-ETF Shares are described in the Prospectus under the section titled "Application for Shares".

Applications for Non-ETF Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Definitions

Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of the Fund:

“Dealing Deadline” means 1:30pm (Irish time) on the Business Day prior to the relevant Dealing Day.

“Valuation Point” means 11.59pm (Irish time) on the relevant Dealing Day.

“Business Day” means a day (except Saturday or Sunday and public holidays) on which retail banks and securities markets in London and Luxembourg are normally open for business.

“Dealing Day” In general, each Business Day will be a Dealing Day. However, certain Business Days will not be Dealing Days where, in the sole determination of the Directors, markets on which the Fund’s investments are listed or traded are closed, provided that there is at least one Dealing Day per fortnight.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading “Fees and Expenses”.

Manager’s Fee
The Manager shall be entitled to a management fee of up to 1.50% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Securities Lending Agent’s Fees
The Fund will retain at least 98% of the securities lending revenue generated, with up to 2% payable to the Securities Lending Agent (and/or to any sub-agent of the Securities Lending Agent) (plus VAT, if any) as a fee to cover the activities it carries out.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

GLOBAL DEFENCE TARGET PASSIVE FINECO AM FUND VI

SUPPLEMENT DATED 4 July 2025

This Supplement contains specific information in relation to **Global Defence Target Passive Fineco AM Fund VI** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus of FAM Evolution ICAV dated 01 December 2022 and any addendum thereto (together the "Prospectus").

The Fund may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed nor a capital protected product. In seeking to achieve its investment objective, the Fund will at times, as described in greater detail below, invest directly or indirectly in a diversified portfolio of instruments and may enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund may bear credit risk in respect of its portfolio of instruments so that if one or more of the issuers of any of those instruments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day	means every Wednesday or if a particular Wednesday is not a day on which retail banks and securities markets in Luxembourg are normally open for business, the next following day on which retail banks and securities markets in Luxembourg are normally open for business.
Target Date	11 October 2030
Subscription Period	means from 23 July 2025 to 30 September 2025 or such longer or shorter period, as may be determined by the Directors in accordance with the requirements of the Central Bank.
Dealing Deadline	means 11.59am (Irish time) one day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates up to the Target Date.
Dividend Payment Dates	Means, 7 October 2026,6 October 2027, 11 October 2028, 10 October 2029 and 9 October 2030 or, if one of these dates is not a Business Day, the next day which is a Business Day.

Investment Objective and Policies

The investment objective of the Fund is to seek to achieve long-term capital appreciation and a dividend on each Dividend Payment Date, up to the Target Date.

The Fund is organised in such a manner that encompasses three distinct phases of the Fund, as explained in the subsequent subsections.

Phase 1: During the Subscription Period

During the Subscription Period, the Manager will invest principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

The reason for having a Subscription Period is to have a short period during which the Fund will accept subscriptions and invest them in a manner designed to seek to achieve a positive investment return whilst maintaining liquidity for the Fund. After the Subscription Period subscriptions into the Fund are no longer accepted. Although the Fund will be closed for subscriptions after the Subscription Period, requests for redemptions received prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day (i.e. each Business Day) in accordance with the section of the Prospectus entitled **"**Redemption of Shares".

Selection of direct investments

The instruments that may be part of the Initial Strategies will be selected based on the Manager's top-down analysis, which includes a view on the global investment outlook and analysis of market opportunities and securities based on an assessment of factors such as income yield, credit risk and bond duration. The Manager will assess each individual security and the bond markets to understand the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the securities under assessment. Following such credit assessment, the Manager appraises a potential investment in a security in terms of relative value when compared to other securities that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which instruments to acquire on behalf of the Fund. When an investment is made, it will be closely monitored by the Manager taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such instrument will be kept under review by the Manager. The Manager may invest substantially or fully in government bonds issued by any Member State.

As part of the Initial Strategies, the Fund may use the financial derivative instruments listed in the section of this Supplement headed "Types of Financial Derivative Instruments".

Phase 2: After the Subscription Period and up to the Target Date

Following the Subscription Period, the Fund will gradually reduce its allocation to the Initial Strategies up to the Target Date in the following manner:

1. It is anticipated that following the last day of the Subscription Period, and on a quarterly basis, the Fund's asset allocation to the Initial Strategies will reduce by 5 % of the Fund's assets. Each reduction will be followed by a corresponding investment by the Fund in the Longer Term Strategies (described at point 2 below)(the "Averaging Out").

   The Averaging Out process will occur every quarter following the last day of the Subscription Period for 60 months up to the Target Date. At the Target Date the Fund will be fully invested in the Longer Term Strategies.

   The Manager, based on their discretion, can alter the percentage disclosed above by decelerating or accelerating the reduction to the Initial Strategies according to their view of market conditions and to mitigate the risk of short-term price fluctuations in the market at or around each quarter period end. The Manager's view on market conditions will be informed by a proprietary quantitative model designed by the Manager which is described below (the "Quant Model") and/or by qualitative considerations that include macroeconomic conditions, valuations and risk sentiment.

This analysis of market conditions will inform the Manager as to whether and by how much they should accelerate or decelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies.

The proprietary Quant Model allows the Manager assess market conditions using quantifiable, definitive and numerical data that can be used for checking portfolio return robustness via historical simulations; i.e. it is analysis on documented and definitive information on the past performance of the relevant market. It is based on technical and market indicators such as the relative strength index which analyses the historical strength or weakness of a stock or market based on closing prices of a recent trading period.

2. As described above, every quarter following the last day of the Subscription Period, the exposure to the Initial Strategies will be reduced and an exposure will be obtained to a diversified portfolio of Underlying Funds as described in detail immediately below (the "Longer Term Strategies"). The Longer Term Strategies are made up of Underlying Funds that provide the Fund with a mixed exposure to certain asset classes while respecting the investment limits outlined below. This means that as part of the Longer Term Strategies the Fund:

    (1) may invest principally in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world. The types of equities the Fund may become exposed to, through its investments in Underlying Funds, include a broad range of large-cap, mid-cap, and small-cap equity securities. These may represent various sectors, geographic regions, or investment themes, in alignment with the specific investment strategies of the selected Underlying Funds;

    (2) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate;

    (3) may invest up to 15% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and

    (4) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

At the time of purchase of the debt securities either directly or via Underlying Funds, the Fund may only have a maximum exposure of 30% of its Net Asset Value to non-Investment Grade debt securities. Where a debt security ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security either directly or indirectly via Underlying Funds.

Selection of Underlying Funds

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which may make up the Initial Strategies and will make up the Longer Term Strategies.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in money market instruments, equity and debt securities' markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the

relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and
- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest in Underlying Funds which have a low cost such as passive index-tracking funds, for example ETF products and have a preference to invest in such low cost Underlying Funds.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

Any Fund assets directly held by the Fund (i.e. not held through Underlying Funds) will be listed or traded on Recognised Markets as set out in Schedule I of the Prospectus entitled "Recognised Markets". For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

The Fund may also invest directly up to 10% of its Net Asset Value in exchange traded commodities ("ETCs") being instruments that give investors indirect exposure to commodities in the form of certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movements of commodities – such as oil, gold and silver or a basket of commodities – and fluctuate in value based on the underlying commodity(ies).

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in alternative investment funds ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Phase 3: After the Target Date

At the Target Date, it is expected (subject to the Manager's discretion as disclosed above) that the Fund will be fully invested in the Longer Term Strategies.

This gradual exposure of Shareholders to the Longer Term Strategies allows Shareholders obtain a diversified exposure to the market while neutralizing the effect of short-term price fluctuations in the broader market.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or over the counter ("OTC") FDI for hedging, risk reduction, or investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDI, please refer to the "Risk Factors" section of the Prospectus.

Types of Financial Derivative Instruments

(i) futures contracts on dividends, bonds, interest rates, equity securities/basket of equity securities, equity/fixed income indices, or basket of equity/fixed income indices;
(ii) forwards on currencies and/or bonds;
(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices, (iii) futures;
(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, inflation-linked swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and
(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i) –(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio exposure. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities, equity indices or a basket of equity indices in order to provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value. When the Fund is using futures in these circumstances, the Fund would be taking a short position for risk reduction.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking such actions, the Fund may increase the duration of the Fund's bond portfolio exposure. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a

bond rises as interest rates fall. The Fund may engage in an interest rate swap transaction with the same purpose This strategy can be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit (i.e. the purchase and sale of an asset in order to profit from a difference in the asset's price between markets whilst ensuring that prices do not deviate substantially from fair value for long periods of time), to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets
e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use options and forwards on currencies ("FX forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce riskas described in detail in this paragraph.

Forwards

The Fund may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets which the Fund may hold or which the Fund may wish to buy.

Interest Rate Futures and Interest Rate Swaps

The Fund may use interest rate futures or interest rate swaps in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When interest rate futures or swaps are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market – based premium) in order to seek to protect the Fund against interest rate increases, reflecting the

Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

Inflation-linked Swaps

The Fund may use inflation-linked swaps to manage the inflation exposure and/or to mitigate the impact of inflation rate fluctuations on the Fund's portfolio. Unlike inflation swaps that involve exchange of payments at a fixed or floating rate in return for payments based on realized inflation, inflation-linked swaps involve payments that are directly tied to an inflation index, such as the Consumer Price Index (CPI).These payments adjust automatically in response to changes in the inflation rate. This mechanism provides the Fund with a dynamic tool to mitigate the impact of inflation rate fluctuations on the portfolio and to adapt its exposure based on anticipated inflation movements. Inflation-linked swaps may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

TRS

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivatives Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement – Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the MSCI World Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. The Index is an equity index designed to represent the performance of large and mid-cap stocks across 23 developed markets. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 350% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term and who wish to receive income up to the Target Date and who are willing to accept a moderate to high level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Dist	€100	From 7 July 2025 to 22 July 2025	Euro	No	No	€100 / €100	Distributing
Class A1 Dist	€100	From 7 July 2025 to 22 July 2025	Euro	No	No	€5,000,000 / €100	Distributing
Class L Dist	€100	From 7 July 2025 to 22 July 2025	Euro	No	Up to 1%	€100 / €100	Distributing

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a fee of up to 1.50 % per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 1% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

FINECO AM LONGEVITY 2040 UCITS ETF

SUPPLEMENT DATED 24 OCTOBER 2025

This Supplement contains specific information in relation to **FINECO AM LONGEVITY 2040 UCITS ETF** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset- management Vehicle with variable capital and segregated liability between sub- funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

Application will be made to Borsa Italiana and/or such other exchanges as the Directors may determine from time to time (the "**Relevant Stock Exchanges**") for the listing of the ETF Shares issued and available to be issued to be admitted to listing on the official list and trading on each of the Relevant Stock Exchanges on or about the launch date of the Fund. This Supplement and the Prospectus together comprise listing particulars for the purposes of listing the ETF Shares on the official list and trading on the main market of each of the Relevant Stock Exchanges.

This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 01 December 2022 and any addendum thereto (together, the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Target Date: 31 December 2040

Investment Objective and Policies

The investment objective of the Fund is to achieve capital appreciation and/or generate income.

The Fund is actively managed and seeks to achieve its investment objective through a lifecycle-based allocation strategy, structured across four distinct phases, as described below.

Each phase corresponds to a different stage of the Fund's lifecycle, moving from growth-oriented exposure in the earlier years to a more stable, income-oriented allocation as the Fund approaches the Target Date.

i. Capital Deployment Phase

During the initial Capital Deployment Phase, which spans the first two years following the Fund's launch, the Fund will initially allocate cash to units of Underlying Funds which provide an exposure to short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and short term fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide. This allocation will be followed by a gradual transition into equity markets. By the end of the Capital Deployment Phase, up to 100% of the Fund's assets will be invested in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world

During the Capital Deployment Phase, the Fund will gain exposure to debt securities through its investments in Underlying Funds. The selection of such debt instruments will therefore occur at the level of the Underlying Funds. These investments will be made on the basis that will result in the Fund having a weighted average interest rate duration of no longer than 2 years across its debt securities allocation.

ii. Growth Phase

The Fund will then enter a long-term Growth Phase, expected to last approximately 8 years. During this phase, the equity allocation is maintained with the objective of participating in market growth, while also incorporating downside mitigation techniques, as described below. Equity exposure, consisting principally of global growth-oriented equities, will generally be maintained at a high level (i.e. representing more than 50% of the Fund's assets) throughout this phase, subject to portfolio rebalancing and tactical adjustments. In addition to the equity exposure, the Fund may also invest in ETCs and in debt securities through investments in units of Underlying Funds and/or via FDIs, in deposits and hold cash for ancillary purposes, as further described below.

iii. Glidepath Phase

As the Fund approaches its Target Date, the Fund will begin a progressive de-risking process, expected to last approximately 5 years, gradually reducing its exposure to growth-oriented equity and reallocating principally into (i) debt securities via investing in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate, and, to a lesser extent (ii) global equities with a high dividend yield focus via investing in units of Underlying Funds. Underlying Funds providing exposure to debt securities will be selected based on a combination of factors, including duration, credit quality, and market liquidity.

By the end of the Glidepath Phase, the portfolio of the Fund is expected to consist principally of Underlying Funds which provide exposure to debt securities.

iv. Distribution Phase

Upon reaching the Target Date, the Fund will enter its final stage, the Distribution Phase. During this phase, the Fund will maintain a conservative allocation with the objective of generating income, typically targeting an initial portfolio composition of approximately 70% in units of Underlying Funds providing exposure to debt securities and 30% in units of Underlying Funds providing exposure to equities with a high dividend yield focus. The fixed income allocation will prioritize investment-grade government and corporate bonds, with consideration given to duration, credit quality, and liquidity. The equity exposure is expected to support ongoing income generation while maintaining some potential for capital appreciation.

Throughout its lifecycle the Fund may implement equity hedging strategies such as the use of options or other financial derivative instruments, designed to reduce the impact of adverse market conditions and help enhance downside protection during periods of heightened volatility or market stress.

Evaluation and Selection of Underlying Funds

The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment

under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest predominantly in active or passive exchange-traded funds ("ETFs") or other collective investment schemes which track an index and have a preference to invest in such types of Underlying Funds.

Throughout its lifecycle, the Fund may also invest up to 10% of its Net Asset Value in exchange traded commodities ("ETCs") being instruments that give investors indirect exposure to commodities in the form of certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movement of commodities - such as oil, gold and silver or a basket of commodities - and fluctuate in value based on the underlying commodity(ies). While such investment is mainly for the purposes of managing risk and protecting the value of the portfolio, it may be used for investment purposes in certain market conditions (e.g. in times of inflation).

Selection of ETCs

A due diligence analysis will be conducted by the Manager to select the ETCs which are appropriate for inclusion in the Fund from an investment perspective.

Due diligence will examine factors, such as but not limited to who the issuers of the ETCs are and their creditworthiness, frequency at which ETCs are audited, whether ETCs embed derivatives or not and cost considerations.

As a result of the above analysis, the Manager will only select those ETCs issued by international credit institutions and asset managers that have best in class experience in the field, that are audited regularly and that do not embed any derivatives and thus have a one to one price relationship between the ETC itself and the underlying commodity.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in non-UCITS (so-called "alternative investment funds"), therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Temporary Investment Measures

The Fund may temporarily depart from the investment strategies set out above in response to the Manager's perception of extraordinary market, political or similar conditions. During these periods, and for as long as and to the extent deemed necessary by the Manager in the best interests of Shareholders, the Fund may increase its holdings of cash and ancillary liquid assets. In doing so, the Fund may succeed in avoiding losses,but may otherwise fail to achieve its investment objective.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk

without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also

be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 250% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the MSCI ACWI Net Total Return EUR Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation and/or income over the long term who are willing to accept a medium to high level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to either high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks;

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The Fund may issue both ETF Shares and Non-ETF Shares. Investors should note the differences between investing in ETF Shares and Non-ETF Shares which are outlined in the sub-section titled “Description of Share Classes” within the section of the Prospectus titled “THE ICAV”.

The following Classes of Shares are available for subscription:

Share Class	ETF-Non-ETF Share	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Acc	ETF Share	€10	28 October 2025 – 28 January 2026	Euro	No	No	€100 / €100	Accumulating*
Class AH Acc	ETF Share	€10	28 October 2025 – 28 January 2026	Euro	Yes	No	€100/€100	Accumulating*
Class I Acc	Non-ETF Share	€100	28 October 2025 – 28 January 2026	Euro	No	No	€1,000,000 / €100	Accumulating*
Class A Dist	ETF Share	€10	28 October 2025 – 28 January 2026	Euro	No	No	€100 / €100	Distributing
Class AH Dist	ETF Share	€10	28 October 2025 – 28 January 2026	Euro	Yes	No	€100 / €100	Distributing
Class I Dist	Non-ETF Share	€100	28 October 2025 – 28 January 2026	Euro	No	No	€1,000,000 / €100	Distributing
Class P Acc	Non-ETF Share	€10,000	28 October 2025 – 28 January 2026	Euro	No	No	€1,000/€100	Accumulating

During the Initial Offer Period Shares are available for subscription on the Primary Market at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available on the Primary Market at the prevailing Net Asset Value of each Class of Shares

* The Share Class is structured as an Accumulating Share Class during the Capital Deployment, Growth and Glidepath Phases. Upon reaching the Target Date, it is expected to operate as a Distributing Share Class in line with the Fund’s income-oriented Distribution Phase with Shareholders being notified in advance.

Application for ETF Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled “Application for Shares”.

Applications for ETF Shares on the Primary Market may be made to the Administrator (whose details are set out in the Application Form). Applications received by the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Application for Non-ETF Shares

Full details on how to purchase Non-ETF Shares are described in the Prospectus under the section titled "Application for Shares".

Applications for Non-ETF Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Definitions

Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of the Fund:

"Dealing Deadline" means 1:30pm (Irish time) on the Business Day prior to the relevant Dealing Day.

"Valuation Point" means 11.59pm (Irish time) on the relevant Dealing Day.

"Business Day" means a day (except Saturday or Sunday and public holidays) on which retail banks and securities markets in London and Luxembourg are normally open for business.

"Dealing Day" In general, each Business Day will be a Dealing Day. However, certain Business Days will not be Dealing Days where, in the sole determination of the Directors, markets on which the Fund's investments are listed or traded are closed, provided that there is at least one Dealing Day per fortnight.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 1.00% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed “Risk Factors” in the Prospectus.

FINECO AM LONGEVITY 2050 UCITS ETF

SUPPLEMENT DATED 24 OCTOBER 2025

This Supplement contains specific information in relation to **FINECO AM LONGEVITY 2050 UCITS ETF** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset- management Vehicle with variable capital and segregated liability between sub- funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

Application will be made to Borsa Italiana and/or such other exchanges as the Directors may determine from time to time (the "**Relevant Stock Exchanges**") for the listing of the ETF Shares issued and available to be issued to be admitted to listing on the official list and trading on each of the Relevant Stock Exchanges on or about the launch date of the Fund. This Supplement and the Prospectus together comprise listing particulars for the purposes of listing the ETF Shares on the official list and trading on the main market of each of the Relevant Stock Exchanges.

This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 01 December 2022 and any addendum thereto (together, the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Target Date: 31 December 2050

Investment Objective and Policies

The investment objective of the Fund is to achieve capital appreciation and/or generate income.

The Fund is actively managed and seeks to achieve its investment objective through a lifecycle-based allocation strategy, structured across four distinct phases, as described below.

Each phase corresponds to a different stage of the Fund's lifecycle, moving from growth-oriented exposure in the earlier years to a more stable, income-oriented allocation as the Fund approaches the Target Date.

i. Capital Deployment Phase

During the initial Capital Deployment Phase, which spans the first two years following the Fund's launch, the Fund will initially allocate cash to units of Underlying Funds which provide an exposure to short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and short term fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide. This allocation will be followed by a gradual transition into equity markets. By the end of the Capital Deployment Phase, up to 100% of the Fund's assets will be invested in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world.

During the Capital Deployment Phase, the Fund will gain exposure to debt securities through its investments in Underlying Funds. The selection of such debt instruments will therefore occur at the level of the Underlying Funds. These investments will be made on the basis that will result in the Fund having a weighted average interest rate duration of no longer than 2 years across its debt securities allocation.

ii. Growth Phase

The Fund will then enter a long-term Growth Phase, expected to last approximately 18 years. During this phase, the equity allocation is maintained with the objective of participating in market growth, while also incorporating downside mitigation techniques, as described below. Equity exposure, consisting primarily of global growth-oriented equities, will generally be maintained at a high level (i.e. representing more than 50% of the Fund's assets) throughout this phase, subject to portfolio rebalancing and tactical adjustments. In addition to the equity exposure, the Fund may also invest in ETCs, in debt securities through investments in units of Underlying Funds and/or via FDIs, in deposits and hold cash for ancillary purposes, as further described below.

iii. Glidepath Phase

As the Fund approaches its Target Date, the Fund will begin a progressive de-risking process, expected to last approximately 5 years, gradually reducing its exposure to growth-oriented equity and reallocating principally into (i) debt securities via investing in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate, and, to a lesser extent, (ii) global equities with a high dividend yield focus via investing in units of Underlying Funds. Underlying Funds providing exposure to debt securities will be selected based on a combination of factors, including duration, credit quality, and market liquidity.

By the end of the Glidepath Phase, the portfolio of the Fund is expected to consist principally of Underlying Funds which provide exposure to debt securities.

iv. Distribution Phase

Upon reaching the Target Date, the Fund will enter its final stage, the Distribution Phase. During this phase, the Fund will maintain a conservative allocation with the objective of generating income, typically targeting an initial portfolio composition of approximately 70% in units of Underlying Funds providing exposure to debt securities and 30% in units of Underlying Funds providing exposure to equities with a high dividend yield focus. The fixed income allocation will prioritize investment-grade government and corporate bonds, with consideration given to duration, credit quality, and liquidity. The equity exposure is expected to support ongoing income generation while maintaining some potential for capital appreciation.

Throughout its lifecycle the Fund may implement equity hedging strategies such as the use of options or other financial derivative instruments, designed to reduce the impact of adverse market conditions and help enhance downside protection during periods of heightened volatility or market stress.

Evaluation and Selection of Underlying Funds

The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment

under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an

increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest predominantly in active or passive exchange-traded funds ("ETFs") or other collective investment schemes which track an index and have a preference to invest in such types of Underlying Funds.

Throughout its lifecycle, the Fund may also invest up to 10% of its Net Asset Value in exchange traded commodities ("ETCs") being instruments that give investors indirect exposure to commodities in the form of certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movement of commodities - such as oil, gold and silver or a basket of commodities - and fluctuate in value based on the underlying commodity(ies). While such investment is mainly for the purposes of managing risk and protecting the value of the portfolio, it may be used for investment purposes in certain market conditions (e.g. in times of inflation).

Selection of ETCs

A due diligence analysis will be conducted by the Manager to select the ETCs which are appropriate for inclusion in the Fund from an investment perspective.

Due diligence will examine factors, such as but not limited to who the issuers of the ETCs are and their creditworthiness, frequency at which ETCs are audited, whether ETCs embed derivatives or not and cost considerations.

As a result of the above analysis, the Manager will only select those ETCs issued by international credit institutions and asset managers that have best in class experience in the field, that are audited regularly and that do not embed any derivatives and thus have a one to one price relationship between the ETC itself and the underlying commodity.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in non-UCITS (so-called "alternative investment funds"), therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Temporary Investment Measures

The Fund may temporarily depart from the investment strategies set out above in response to the Manager's perception of extraordinary market, political or similar conditions. During these periods, and for as long as and to the extent deemed necessary by the Manager in the best interests of Shareholders, the Fund may increase its holdings of cash and ancillary liquid assets. In doing so, the Fund may succeed in avoiding losses, but may otherwise fail to achieve its investment objective.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities,

equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments

and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 250% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the MSCI ACWI Net Total Return EUR Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation and/or income over the long term who are willing to accept a medium to high level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to either high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks;

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The Fund may issue both ETF Shares and Non-ETF Shares. Investors should note the differences between investing in ETF Shares and Non-ETF Shares which are outlined in the sub-section titled “Description of Share Classes” within the section of the Prospectus titled “THE ICAV”.

The following Classes of Shares are available for subscription:

Share Class	ETF-Non-ETF Share	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Acc	ETF Share	€10	28 October 2025 – 28 January 2026	Euro	No	No	€100 / €100	Accumulating*
Class AH Acc	ETF Share	€10	28 October 2025 – 28 January 2026	Euro	Yes	No	€100/€100	Accumulating*
Class I Acc	Non-ETF Share	€100	28 October 2025 – 28 January 2026	Euro	No	No	€1,000,000 / €100	Accumulating*
Class A Dist	ETF Share	€10	28 October 2025 – 28 January 2026	Euro	No	No	€100 / €100	Distributing
Class AH Dist	ETF Share	€10	28 October 2025 – 28 January 2026	Euro	Yes	No	€100 / €100	Distributing
Class I Dist	Non-ETF Share	€100	28 October 2025 – 28 January 2026	Euro	No	No	€1,000,000 / €100	Distributing
Class P Acc	Non-ETF Share	€10,000	28 October 2025 – 28 January 2026	Euro	No	No	€1,000/€100	Accumulating

During the Initial Offer Period Shares are available for subscription on the Primary Market at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available on the Primary Market at the prevailing Net Asset Value of each Class of Shares

* The Share Class is structured as an Accumulating Share Class during the Capital Deployment, Growth and Glidepath Phases. Upon reaching the Target Date, it is expected to operate as a Distributing Share Class in line with the Fund’s income-oriented Distribution Phase with Shareholders being notified in advance.

Application for ETF Shares
Full details on how to purchase Shares are described in the Prospectus under the section titled “Application for Shares”.

Applications for ETF Shares on the Primary Market may be made to the Administrator (whose details are set out in the Application Form). Applications received by the Administrator prior to the Dealing Deadline for any

Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Application for Non-ETF Shares

Full details on how to purchase Non-ETF Shares are described in the Prospectus under the section titled "Application for Shares".

Applications for Non-ETF Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Definitions

Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of the Fund:

"Dealing Deadline" means 1:30pm (Irish time) on the Business Day prior to the relevant Dealing Day.

"Valuation Point" means 11.59pm (Irish time) on the relevant Dealing Day.

"Business Day" means a day (except Saturday or Sunday and public holidays) on which retail banks and securities markets in London and Luxembourg are normally open for business.

"Dealing Day" In general, each Business Day will be a Dealing Day. However, certain Business Days will not be Dealing Days where, in the sole determination of the Directors, markets on which the Fund's investments are listed or traded are closed, provided that there is at least one Dealing Day per fortnight.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 1.00% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

FINECO AM LONGEVITY 2060 UCITS ETF

SUPPLEMENT DATED 24 OCTOBER 2025

This Supplement contains specific information in relation to **FINECO AM LONGEVITY 2060 UCITS ETF** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset- management Vehicle with variable capital and segregated liability between sub- funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

Application will be made to Borsa Italiana and/or such other exchanges as the Directors may determine from time to time (the "**Relevant Stock Exchanges**") for the listing of the ETF Shares issued and available to be issued to be admitted to listing on the official list and trading on each of the Relevant Stock Exchanges on or about the launch date of the Fund. This Supplement and the Prospectus together comprise listing particulars for the purposes of listing the ETF Shares on the official list and trading on the main market of each of the Relevant Stock Exchanges.

This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 01 December 2022 and any addendum thereto (together, the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Target Date: 31 December 2060

Investment Objective and Policies

The investment objective of the Fund is to achieve capital appreciation and/or generate income.

The Fund is actively managed and seeks to achieve its investment objective through a lifecycle-based allocation strategy, structured across four distinct phases, as described below.

Each phase corresponds to a different stage of the Fund's lifecycle, moving from growth-oriented exposure in the earlier years to a more stable, income-oriented allocation as the Fund approaches the Target Date.

i. Capital Deployment Phase

During the initial Capital Deployment Phase, which spans the first two years following the Fund's launch, the Fund will initially allocate cash to units of Underlying Funds which provide an exposure to short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and short term fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide. This allocation will be followed by a gradual transition into equity markets. By the end of the Capital Deployment Phase, up to 100% of the Fund's assets will be invested in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world

During the Capital Deployment Phase, the Fund will gain exposure to debt securities through its investments in Underlying Funds. The selection of such debt instruments will therefore occur at the level of the Underlying Funds. These investments will be made on the basis that will result in the Fund having a weighted average interest rate duration of no longer than 2 years across its debt securities allocation.

ii. Growth Phase

The Fund will then enter a long-term Growth Phase, expected to last approximately 28 years. During this phase, the equity allocation is maintained with the objective of participating in market growth, while also incorporating downside mitigation techniques, as described below. Equity exposure, consisting principally of global growth-oriented equities, will generally be maintained at a high level (i.e. representing more than 50% of the Fund's assets) throughout this phase, subject to portfolio rebalancing and tactical adjustments. In addition to the equity exposure, the Fund may also invest in ETCs and in debt securities through investments in units of Underlying Funds and/or via FDIs, in deposits and hold cash for ancillary purposes, as further

described below.

iii. Glidepath Phase

As the Fund approaches its Target Date, the Fund will begin a progressive de-risking process, expected to last approximately 5 years, gradually reducing its exposure to growth-oriented equity and reallocating principally into (i) debt securities via investing in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate, and, to a lesser extent, (ii) global equities with a high dividend yield focus via investing in units of Underlying Funds. Underlying Funds providing exposure to debt securities will be selected based on a combination of factors, including duration, credit quality, and market liquidity.

By the end of the Glidepath Phase, the portfolio of the Fund is expected to consist principally of Underlying Funds which provide exposure to debt securities.

iv. Distribution Phase

Upon reaching the Target Date, the Fund will enter its final stage, the Distribution Phase. During this phase, the Fund will maintain a conservative allocation with the objective of generating income, typically targeting an initial portfolio composition of approximately 70% in units of Underlying Funds providing exposure to debt securities and 30% in units of Underlying Funds providing exposure to equities with a high dividend yield focus. The fixed income allocation will prioritize investment-grade government and corporate bonds, with consideration given to duration, credit quality, and liquidity. The equity exposure is expected to support ongoing income generation while maintaining some potential for capital appreciation.

Throughout its lifecycle the Fund may implement equity hedging strategies such as the use of options or other financial derivative instruments, designed to reduce the impact of adverse market conditions and help enhance downside protection during periods of heightened volatility or market stress.

Evaluation and Selection of Underlying Funds

The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment

under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest predominantly in active or passive exchange-traded funds ("ETFs") or other collective investment schemes which track an index and have a preference to invest in such types of Underlying Funds.

Throughout its lifecycle, the Fund may also invest up to 10% of its Net Asset Value in exchange traded commodities ("ETCs") being instruments that give investors indirect exposure to commodities in the form of certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movement of commodities - such as oil, gold and silver or a basket of commodities - and fluctuate in value based on the underlying commodity(ies). While such investment is mainly for the purposes of managing risk and protecting the value of the portfolio, it may be used for investment purposes in certain market conditions (e.g. in times of inflation).

Selection of ETCs

A due diligence analysis will be conducted by the Manager to select the ETCs which are appropriate for inclusion in the Fund from an investment perspective.

Due diligence will examine factors, such as but not limited to who the issuers of the ETCs are and their creditworthiness, frequency at which ETCs are audited, whether ETCs embed derivatives or not and cost considerations.

As a result of the above analysis, the Manager will only select those ETCs issued by international credit institutions and asset managers that have best in class experience in the field, that are audited regularly and that do not embed any derivatives and thus have a one to one price relationship between the ETC itself and the underlying commodity.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in non-UCITS (so-called "alternative investment funds"), therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Temporary Investment Measures

The Fund may temporarily depart from the investment strategies set out above in response to the Manager's perception of extraordinary market, political or similar conditions. During these periods, and for as long as and to the extent deemed necessary by the Manager in the best interests of Shareholders, the Fund may increase its holdings of cash and ancillary liquid assets. In doing so, the Fund may succeed in avoiding losses,but may otherwise fail to achieve its investment objective.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond

prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 250% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the MSCI ACWI Net Total Return EUR Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation and/or income over the long term who are willing to accept a medium to high level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to either high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks;

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make

an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The Fund may issue both ETF Shares and Non-ETF Shares. Investors should note the differences between investing in ETF Shares and Non-ETF Shares which are outlined in the sub-section titled “Description of Share Classes” within the section of the Prospectus titled “THE ICAV”.

The following Classes of Shares are available for subscription:

Share Class	ETF-Non-ETF Share	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Acc	ETF Share	€10	28 October 2025 – 28 January 2026	Euro	No	No	€100 / €100	Accumulating*
Class AH Acc	ETF Share	€10	28 October 2025 – 28 January 2026	Euro	Yes	No	€100/€100	Accumulating*
Class I Acc	Non-ETF Share	€100	28 October 2025 – 28 January 2026	Euro	No	No	€1,000,000 / €100	Accumulating*
Class A Dist	ETF Share	€10	28 October 2025 – 28 January 2026	Euro	No	No	€100 / €100	Distributing
Class AH Dist	ETF Share	€10	28 October 2025 – 28 January 2026	Euro	Yes	No	€100 / €100	Distributing
Class I Dist	Non-ETF Share	€100	28 October 2025 – 28 January 2026	Euro	No	No	€1,000,000 / €100	Distributing
Class P Acc	Non-ETF Share	€10,000	28 October 2025 – 28 January 2026	Euro	No	No	€1,000/€100	Accumulating

During the Initial Offer Period Shares are available for subscription on the Primary Market at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available on the Primary Market at the prevailing Net Asset Value of each Class of Shares

* The Share Class is structured as an Accumulating Share Class during the Capital Deployment, Growth and Glidepath Phases. Upon reaching the Target Date, it is expected to operate as a Distributing Share Class in line with the Fund’s income-oriented Distribution Phase with Shareholders being notified in advance.

Application for ETF Shares

Full details on how to purchase Shares are described in the Prospectus under the section titled “Application for Shares”.

Applications for ETF Shares on the Primary Market may be made to the Administrator (whose details are set out in the Application Form). Applications received by the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Application for Non-ETF Shares

Full details on how to purchase Non-ETF Shares are described in the Prospectus under the section titled "Application for Shares".

Applications for Non-ETF Shares may be made to the Paying Agent or the Administrator (whose details are set out in the Application Form). Applications received by the Paying Agent or the Administrator prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day. Any applications received after the Dealing Deadline for a particular Dealing Day will be processed on the following Dealing Day, unless the Directors in their absolute discretion, in exceptional circumstances, otherwise determine to accept one or more applications received after the Dealing Deadline for processing on that Dealing Day, provided that such application(s) have been received prior to the Valuation Point for the particular Dealing Day.

Definitions

Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of the Fund:

“Dealing Deadline” means 1:30pm (Irish time) on the Business Day prior to the relevant Dealing Day.

“Valuation Point” means 11.59pm (Irish time) on the relevant Dealing Day.

“Business Day” means a day (except Saturday or Sunday and public holidays) on which retail banks and securities markets in London and Luxembourg are normally open for business.

“Dealing Day” In general, each Business Day will be a Dealing Day. However, certain Business Days will not be Dealing Days where, in the sole determination of the Directors, markets on which the Fund’s investments are listed or traded are closed, provided that there is at least one Dealing Day per fortnight.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading “Fees and Expenses”.

Manager’s Fee
The Manager shall be entitled to a management fee of up to 1.00% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and

printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Longevity 2040 Fineco AM Fund

SUPPLEMENT DATED 24 OCTOBER 2025

This Supplement contains specific information in relation to **Longevity 2040 Fineco AM Fund** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset- management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations. **This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 01 December 2022 and any addendum thereto (together, the "Prospectus").**

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Target Date: 31 December 2040

Investment Objective and Policies

The investment objective of the Fund is to achieve capital appreciation and/or generate income. The Fund is actively managed and seeks to achieve its investment objective through a lifecycle-based allocation strategy, structured across four distinct phases, as described below.

Each phase corresponds to a different stage of the Fund's lifecycle, moving from growth-oriented exposure in the earlier years to a more stable, income-oriented allocation as the Fund approaches the Target Date.

i. Capital Deployment Phase

During the initial Capital Deployment Phase, which spans the first two years following the Fund's launch, the Fund will initially allocate cash to units of Underlying Funds which provide an exposure to short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and short term fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide. This allocation will be followed by a gradual transition into equity markets. By the end of the Capital Deployment Phase, up to 100% of the Fund's assets will be invested in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world.

During the Capital Deployment Phase, the Fund will gain exposure to debt securities through its investments in Underlying Funds. The selection of such debt instruments will therefore occur at the level of the Underlying Funds. These investments will be made on the basis that will result in the Fund having a weighted average interest rate duration of no longer than 2 years across its debt securities allocation.

ii. Growth Phase

The Fund will then enter a long-term Growth Phase, expected to last approximately 8 years. During this phase, the equity allocation is maintained with the objective of participating in market growth, while also incorporating downside mitigation techniques, as described below. Equity exposure, consisting primarily of global growth-oriented equities, will generally be maintained at a high level (i.e. representing more than 50% of the Fund's assets) throughout this phase, subject to portfolio rebalancing and tactical adjustments meaning temporary and limited deviations from the asset allocation undertaken for risk, liquidity or operational portfolio management purposes (such as small shifts in allocation or currency hedging). In addition to the equity exposure, the Fund may also invest in ETCs and in debt securities through investments in units of Underlying Funds and/or via FDIs, in deposits and hold cash for ancillary purposes, as further described below.

iii. Glidepath Phase

As the Fund approaches its Target Date, the Fund will begin a progressive de-risking process, expected to last approximately 5 years, gradually reducing its exposure to growth-orientated equity and reallocating into (i) debt securities via investing in units of Underlying Funds which provide an exposure to government or

corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate, and (ii) global equities with a with a high dividend yield focus via investing in units of Underlying Funds. Underlying Funds providing exposure to debt securities will be selected based on a combination of factors, including duration, credit quality, and market liquidity.

By the end of the Glidepath Phase, the portfolio of the Fund is expected to consist principally of Underlying Funds which provide exposure to debt securities.

iv. Distribution Phase

Upon reaching the Target Date, the Fund will enter its final stage, the Distribution Phase. During this phase, the Fund will maintain a conservative allocation with the objective of generating income, typically targeting an initial portfolio composition of approximately 70% in units of Underlying Funds providing exposure to debt securities and 30% in units of Underlying Funds providing exposure to equities with a high dividend yield focus. The fixed income allocation will prioritize investment-grade government and corporate bonds, with consideration given to duration, credit quality, and liquidity. The equity exposure is expected to support ongoing income generation while maintaining some potential for capital appreciation.

Throughout its lifecycle the Fund may implement equity hedging strategies such as the use of options or other financial derivative instruments, designed to reduce the impact of adverse market conditions and help enhance downside protection during periods of heightened volatility or market stress.

Evaluation and Selection of Underlying Funds

The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest predominantly in active or passive exchange-traded funds ("ETFs") or other collective investment schemes which track an index and have a preference to invest in such types of Underlying Funds.

Throughout its lifecycle, the Fund may also invest up to 10% of its Net Asset Value in exchange traded commodities ("ETCs") being instruments that give investors indirect exposure to commodities in the form of

certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movement of commodities - such as oil, gold and silver or a basket of commodities - and fluctuate in value based on the underlying commodity(ies). ETCs will be used by the Fund to gain indirect exposure to gold only. While such investment is mainly for the purposes of managing risk and protecting the value of the portfolio, it may be used for investment purposes in certain market conditions (e.g. in times of inflation).

Selection of ETCs

A due diligence analysis will be conducted by the Manager to select the ETCs which are appropriate for inclusion in the Fund from an investment perspective.

Due diligence will examine factors, such as but not limited to who the issuers of the ETCs are and their creditworthiness, frequency at which ETCs are audited, whether ETCs embed derivatives or not and cost considerations.

As a result of the above analysis, the Manager will only select those ETCs issued by international credit institutions and asset managers that have best in class experience in the field, that are audited regularly and that do not embed any derivatives and thus have a one to one price relationship between the ETC itself and the underlying commodity.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in non-UCITS (so-called "alternative investment funds"), therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Temporary Investment Measures

The Fund may temporarily depart from the investment strategies set out above in response to the Manager's perception of extraordinary market, political or similar conditions. During these periods, and for as long as and to the extent deemed necessary by the Manager in the best interests of Shareholders, the Fund may increase its holdings of cash and ancillary liquid assets. In doing so, the Fund may succeed in avoiding losses, but may otherwise fail to achieve its investment objective.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate

swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets

which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 250% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the MSCI ACWI Net Total Return EUR Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivativesused, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation and/or income over the long term who are willing to accept a medium to high level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR

or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to either high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks;

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class	Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type

Class A Acc	€10	28 October 2025 – 28 April 2026	Euro	No	No	€100 / €100	Accumulating*
Class AH Acc	€10	28 October 2025 – 28 April 2026	Euro	No	No	€5,000,000 / €100	Accumulating*
Class A1 Acc	€100	28 October 2025 – 28 April 2026	Euro	No	No	€5,000,000 / €100	Accumulating*
Class L Acc	€100	28 October 2025 – 28 April 2026	Euro	No	Yes	€100 / €100	Accumulating*
Class L Dist	€100	28 October 2025 – 28 April 2026	Euro	No	Yes	€100 / €100	Distributing
Class I Acc	€100	28 October 2025 – 28 April 2026	Euro	No	No	€1,000,000 / €100	Accumulating*
Class A Dist	€100	28 October 2025 – 28 April 2026	Euro	No	No	€100 / €100	Distributing
Class AH Dist	€100	28 October 2025 – 28 April 2026	Euro	No	No	€5,000,000 / €100	Distributing
Class I Dist	€100	28 October 2025 – 28 April 2026	Euro	No	No	€1,000,000 / €100	Distributing
Class P Acc	€10,000	28 October 2025 – 28 April 2026	Euro	No	No	€10,000 / €100	Accumulating *

During the Initial Offer Period Shares are available for subscription at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

*The Share Class is structured as an Accumulating Share Class during the Capital Deployment, Growth and Glidepath Phases. Upon reaching the Target Date, it is expected to operate as a Distributing Share Class in line with the Fund's income-oriented Distribution Phase with Shareholders being notified in advance.

Definitions

Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of the Fund:

"**Dealing Deadline**" means 1:30pm (Irish time) on the Business Day prior to the relevant Dealing Day.

"**Valuation Point**" means 11.59pm (Irish time) on the relevant Dealing Day.

"Business Day" means a day (except Saturday or Sunday and public holidays) on which retail banks and securities markets in London and Luxembourg are normally open for business.

"Dealing Day" In general, each Business Day will be a Dealing Day. However, certain Business Days will not be Dealing Days where, in the sole determination of the Directors, markets on which the Fund's investments

are listed or traded are closed, provided that there is at least one Dealing Day per fortnight.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 2.00% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 1% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

Redemption Charge
Up to 1% of the Net Asset Value of the Shares being redeemed, payable to the Manager and applicable only within the first three years following the end of the Subscription Period.

If a sales charge and/or a redemption charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Longevity 2050 Fineco AM Fund

SUPPLEMENT DATED 24 OCTOBER 2025

This Supplement contains specific information in relation to **Longevity 2050 Fineco AM Fund** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset- management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations. **This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 01 December 2022 and any addendum thereto (together, the "Prospectus").**

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Target Date: 31 December 2050

Investment Objective and Policies

The investment objective of the Fund is to achieve capital appreciation and/or generate income. The Fund is actively managed and seeks to achieve its investment objective through a lifecycle-based allocation strategy, structured across four distinct phases, as described below.

Each phase corresponds to a different stage of the Fund's lifecycle, moving from growth-oriented exposure in the earlier years to a more stable, income-oriented allocation as the Fund approaches the Target Date.

i. Capital Deployment Phase

During the initial Capital Deployment Phase, which spans the first two years following the Fund's launch, the Fund will initially allocate cash to units of Underlying Funds which provide an exposure to short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and short term fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide. This allocation will be followed by a gradual transition into equity markets. By the end of the Capital Deployment Phase, up to 100% of the Fund's assets will be invested in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world.

During the Capital Deployment Phase, the Fund will gain exposure to debt securities through its investments in Underlying Funds. The selection of such debt instruments will therefore occur at the level of the Underlying Funds. These investments will be made on the basis that will result in the Fund having a weighted average interest rate duration of no longer than 2 years across its debt securities allocation.

ii. Growth Phase

The Fund will then enter a long-term Growth Phase, expected to last approximately 18 years. During this phase, the equity allocation is maintained with the objective of participating in market growth, while also incorporating downside mitigation techniques, as described below. Equity exposure, consisting primarily of global growth-oriented equities, will generally be maintained at a high level (i.e. representing more than 50% of the Fund's assets) throughout this phase, subject to portfolio rebalancing and tactical adjustments meaning temporary and limited deviations from the asset allocation undertaken for risk, liquidity or operational portfolio management purposes (such as small shifts in allocation or currency hedging). In addition to the equity exposure, the Fund may also invest in ETCs and in debt securities through investments in units of Underlying Funds and/or via FDIs, in deposits and hold cash for ancillary purposes, as further described below.

iii. Glidepath Phase

As the Fund approaches its Target Date, the Fund will begin a progressive de-risking process, expected to last approximately 5 years, gradually reducing its exposure to growth-oriented equity and reallocating into (i) debt securities via investing in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds,

corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate, and (ii) global equities with a with a high dividend yield focus via investing in units of Underlying Funds. Underlying Funds providing exposure to debt securities will be selected based on a combination of factors, including duration, credit quality, and market liquidity.

By the end of the Glidepath Phase, the portfolio of the Fund is expected to consist principally of Underlying Funds which provide exposure to debt securities.

iv. Distribution Phase

Upon reaching the Target Date, the Fund will enter its final stage, the Distribution Phase. During this phase, the Fund will maintain a conservative allocation with the objective of generating income, typically targeting an initial portfolio composition of approximately 70% in units of Underlying Funds providing exposure to debt securities and 30% in units of Underlying Funds providing exposure to equities with a high dividend yield focus. The fixed income allocation will prioritize investment-grade government and corporate bonds, with consideration given to duration, credit quality, and liquidity. The equity exposure is expected to support ongoing income generation while maintaining some potential for capital appreciation.

Throughout its lifecycle the Fund may implement equity hedging strategies such as the use of options or other financial derivative instruments, designed to reduce the impact of adverse market conditions and help enhance downside protection during periods of heightened volatility or market stress.

Evaluation and Selection of Underlying Funds

The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest predominantly in active or passive exchange-traded funds ("ETFs") or other collective investment schemes which track an index and have a preference to invest in such types of Underlying Funds.

Throughout its lifecycle, the Fund may also invest up to 10% of its Net Asset Value in exchange traded commodities ("ETCs") being instruments that give investors indirect exposure to commodities in the form of certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movement of

commodities - such as oil, gold and silver or a basket of commodities - and fluctuate in value based on the underlying commodity(ies). While such investment is mainly for the purposes of managing risk and protecting the value of the portfolio, it may be used for investment purposes in certain market conditions (e.g. in times of inflation).

Selection of ETCs

A due diligence analysis will be conducted by the Manager to select the ETCs which are appropriate for inclusion in the Fund from an investment perspective.

Due diligence will examine factors, such as but not limited to who the issuers of the ETCs are and their creditworthiness, frequency at which ETCs are audited, whether ETCs embed derivatives or not and cost considerations.

As a result of the above analysis, the Manager will only select those ETCs issued by international credit institutions and asset managers that have best in class experience in the field, that are audited regularly and that do not embed any derivatives and thus have a one to one price relationship between the ETC itself and the underlying commodity.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in non-UCITS (so-called "alternative investment funds"), therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Temporary Investment Measures

The Fund may temporarily depart from the investment strategies set out above in response to the Manager's perception of extraordinary market, political or similar conditions. During these periods, and for as long as and to the extent deemed necessary by the Manager in the best interests of Shareholders, the Fund may increase its holdings of cash and ancillary liquid assets. In doing so, the Fund may succeed in avoiding losses, but may otherwise fail to achieve its investment objective.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets

which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 250% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the MSCI ACWI Net Total Return EUR Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivativesused, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation and/or income over the long term who are willing to accept a medium to high level of volatility.

SFDR Classification: Article 6 Fund. SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to either high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks;

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Acc	€10	28 October 2025 – 28 April 2026	Euro	No	No	€100 / €100	Accumulating*

Class AH Acc	€10	28 October 2025 – 28 April 2026	Euro	No	No	€5,000,000 / €100	Accumulating*
Class A1 Acc	€100	28 October 2025 – 28 April 2026	Euro	No	No	€5,000,000 / €100	Accumulating*
Class L Acc	€100	28 October 2025 – 28 April 2026	Euro	No	Yes	€100 / €100	Accumulating*
Class L Dist	€100	28 October 2025 – 28 April 2026	Euro	No	Yes	€100 / €100	Distributing
Class I Acc	€100	28 October 2025 – 28 April 2026	Euro	No	No	€1,000,000 / €100	Accumulating*
Class A Dist	€100	28 October 2025 – 28 April 2026	Euro	No	No	€100 / €100	Distributing
Class AH Dist	€100	28 October 2025 – 28 April 2026	Euro	No	No	€5,000,000 / €100	Distributing
Class I Dist	€100	28 October 2025 – 28 April 2026	Euro	No	No	€1,000,000 / €100	Distributing
Class P Acc	€10,000	28 October 2025 – 28 April 2026	Euro	No	No	€10,000 / €100	Accumulating *

During the Initial Offer Period Shares are available for subscription at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

*The Share Class is structured as an Accumulating Share Class during the Capital Deployment, Growth and Glidepath Phases. Upon reaching the Target Date, it is expected to operate as a Distributing Share Class in line with the Fund's income-oriented Distribution Phase with Shareholders being notified in advance.

Definitions

Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of the Fund:

"**Dealing Deadline**" means 1:30pm (Irish time) on the Business Day prior to the relevant Dealing Day.

"**Valuation Point**" means 11.59pm (Irish time) on the relevant Dealing Day.

"Business Day" means a day (except Saturday or Sunday and public holidays) on which retail banks and securities markets in London and Luxembourg are normally open for business.

"Dealing Day" In general, each Business Day will be a Dealing Day. However, certain Business Days will not be Dealing Days where, in the sole determination of the Directors, markets on which the Fund's investments are listed or traded are closed, provided that there is at least one Dealing Day per fortnight.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 2.00% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 1% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

Redemption Charge
Up to 1% of the Net Asset Value of the Shares being redeemed, payable to the Manager and applicable only within the first three years following the end of the Subscription Period.

If a sales charge and/or a redemption charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

Longevity 2060 Fineco AM Fund

SUPPLEMENT DATED 24 OCTOBER 2025

This Supplement contains specific information in relation to **Longevity 2060 Fineco AM Fund** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset- management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations. **This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 01 December 2022 and any addendum thereto (together, the "Prospectus").**

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Target Date: 31 December 2060

Investment Objective and Policies

The investment objective of the Fund is to achieve capital appreciation and/or generate income. The Fund is actively managed and seeks to achieve its investment objective through a lifecycle-based allocation strategy, structured across four distinct phases, as described below.

Each phase corresponds to a different stage of the Fund's lifecycle, moving from growth-oriented exposure in the earlier years to a more stable, income-oriented allocation as the Fund approaches the Target Date.

i. Capital Deployment Phase

During the initial Capital Deployment Phase, which spans the first two years following the Fund's launch, the Fund will initially allocate cash to units of Underlying Funds which provide an exposure to short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and short term fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide. This allocation will be followed by a gradual transition into equity markets. By the end of the Capital Deployment Phase, up to 100% of the Fund's assets will be invested in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world.

During the Capital Deployment Phase, the Fund will gain exposure to debt securities through its investments in Underlying Funds. The selection of such debt instruments will therefore occur at the level of the Underlying Funds. These investments will be made on the basis that will result in the Fund having a weighted average interest rate duration of no longer than 2 years across its debt securities allocation.

ii. Growth Phase

The Fund will then enter a long-term Growth Phase, expected to last approximately 28 years. During this phase, the equity allocation is maintained with the objective of participating in market growth, while also incorporating downside mitigation techniques, as described below. Equity exposure, consisting primarily of global growth-oriented equities, will generally be maintained at a high level (i.e. representing more than 50% of the Fund's assets) throughout this phase, subject to portfolio rebalancing and tactical adjustments meaning temporary and limited deviations from the asset allocation undertaken for risk, liquidity or operational portfolio management purposes (such as small shifts in allocation or currency hedging). In addition to the equity exposure, the Fund may also invest in ETCs and in debt securities through investments in units of Underlying Funds and/or via FDIs, in deposits and hold cash for ancillary purposes, as further described below.

iii. Glidepath Phase

As the Fund approaches its Target Date, the Fund will begin a progressive de-risking process, expected to last approximately 5 years, gradually reducing its exposure to growth-oriented equity and reallocating into (i) debt securities via investing in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds,

corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate, and (ii) global equities with a with a high dividend yield focus via investing in units of Underlying Funds. Underlying Funds providing exposure to debt securities will be selected based on a combination of factors, including duration, credit quality, and market liquidity.

By the end of the Glidepath Phase, the portfolio of the Fund is expected to consist principally of Underlying Funds which provide exposure to debt securities.

iv. Distribution Phase

Upon reaching the Target Date, the Fund will enter its final stage, the Distribution Phase. During this phase, the Fund will maintain a conservative allocation with the objective of generating income, typically targeting an initial portfolio composition of approximately 70% in units of Underlying Funds providing exposure to debt securities and 30% in units of Underlying Funds providing exposure to equities with a high dividend yield focus. The fixed income allocation will prioritize investment-grade government and corporate bonds, with consideration given to duration, credit quality, and liquidity. The equity exposure is expected to support ongoing income generation while maintaining some potential for capital appreciation.

Throughout its lifecycle the Fund may implement equity hedging strategies such as the use of options or other financial derivative instruments, designed to reduce the impact of adverse market conditions and help enhance downside protection during periods of heightened volatility or market stress.

Evaluation and Selection of Underlying Funds

The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest predominantly in active or passive exchange-traded funds ("ETFs") or other collective investment schemes which track an index and have a preference to invest in such types of Underlying Funds.

Throughout its lifecycle, the Fund may also invest up to 10% of its Net Asset Value in exchange traded commodities ("ETCs") being instruments that give investors indirect exposure to commodities in the form of certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movement of

commodities - such as oil, gold and silver or a basket of commodities - and fluctuate in value based on the underlying commodity(ies). ETCs will be used by the Fund to gain indirect exposure to gold only. While such investment is mainly for the purposes of managing risk and protecting the value of the portfolio, it may be used for investment purposes in certain market conditions (e.g. in times of inflation).

Selection of ETCs

A due diligence analysis will be conducted by the Manager to select the ETCs which are appropriate for inclusion in the Fund from an investment perspective.

Due diligence will examine factors, such as but not limited to who the issuers of the ETCs are and their creditworthiness, frequency at which ETCs are audited, whether ETCs embed derivatives or not and cost considerations.

As a result of the above analysis, the Manager will only select those ETCs issued by international credit institutions and asset managers that have best in class experience in the field, that are audited regularly and that do not embed any derivatives and thus have a one to one price relationship between the ETC itself and the underlying commodity.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in non-UCITS (so-called "alternative investment funds"), therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Temporary Investment Measures

The Fund may temporarily depart from the investment strategies set out above in response to the Manager's perception of extraordinary market, political or similar conditions. During these periods, and for as long as and to the extent deemed necessary by the Manager in the best interests of Shareholders, the Fund may increase its holdings of cash and ancillary liquid assets. In doing so, the Fund may succeed in avoiding losses, but may otherwise fail to achieve its investment objective.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate

swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets

which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 250% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the MSCI ACWI Net Total Return EUR Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivativesused, in accordance with the requirements of the Central Bank, is expected to be 250% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation and/or income over the long term who are willing to accept a medium to high level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR

or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to either high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks;

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.
It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class	Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type

Class A Acc	€10	28 October 2025 – 28 April 2026	Euro	No	No	€100 / €100	Accumulating*
Class AH Acc	€10	28 October 2025 – 28 April 2026	Euro	No	No	€5,000,000 / €100	Accumulating*
Class A1 Acc	€100	28 October 2025 – 28 April 2026	Euro	No	No	€5,000,000 / €100	Accumulating*
Class L Acc	€100	28 October 2025 – 28 April 2026	Euro	No	Yes	€100 / €100	Accumulating*
Class L Dist	€100	28 October 2025 – 28 April 2026	Euro	No	Yes	€100 / €100	Distributing
Class I Acc	€100	28 October 2025 – 28 April 2026	Euro	No	No	€1,000,000 / €100	Accumulating*
Class A Dist	€100	28 October 2025 – 28 April 2026	Euro	No	No	€100 / €100	Distributing
Class AH Dist	€100	28 October 2025 – 28 April 2026	Euro	No	No	€5,000,000 / €100	Distributing
Class I Dist	€100	28 October 2025 – 28 April 2026	Euro	No	No	€1,000,000 / €100	Distributing
Class P Acc	€10,000	28 October 2025 – 28 April 2026	Euro	No	No	€10,000 / €100	Accumulating *

During the Initial Offer Period Shares are available for subscription at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

*The Share Class is structured as an Accumulating Share Class during the Capital Deployment, Growth and Glidepath Phases. Upon reaching the Target Date, it is expected to operate as a Distributing Share Class in line with the Fund's income-oriented Distribution Phase with Shareholders being notified in advance.

Definitions

Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of the Fund:

"**Dealing Deadline**" means 1:30pm (Irish time) on the Business Day prior to the relevant Dealing Day.

"**Valuation Point**" means 11.59pm (Irish time) on the relevant Dealing Day.

"Business Day" means a day (except Saturday or Sunday and public holidays) on which retail banks and securities markets in London and Luxembourg are normally open for business.

"Dealing Day" In general, each Business Day will be a Dealing Day. However, certain Business Days will not be Dealing Days where, in the sole determination of the Directors, markets on which the Fund's investments

are listed or traded are closed, provided that there is at least one Dealing Day per fortnight.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 2.00% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 1% of the value of the gross subscription unless an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

Redemption Charge
Up to 1% of the Net Asset Value of the Shares being redeemed, payable to the Manager and applicable only within the first three years following the end of the Subscription Period.

If a sales charge and/or a redemption charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

GLOBAL DEFENCE TARGET PASSIVE FINECO AM FUND VII

SUPPLEMENT DATED 3 DECEMBER 2025

This Supplement contains specific information in relation to **Global Defence Target Passive Fineco AM Fund VII** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus of FAM Evolution ICAV dated 01 December 2022 and the addendum thereto (together the "Prospectus").

The Fund may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed nor a capital protected product. In seeking to achieve its investment objective, the Fund will at times, as described in greater detail below, invest directly or indirectly in a diversified portfolio of instruments and may enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund may bear credit risk in respect of its portfolio of instruments so that if one or more of the issuers of any of those instruments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day	means every Wednesday or if a particular Wednesday is not a day on which retail banks and securities markets in Luxembourg are normally open for business, the next following day on which retail banks and securities markets in Luxembourg are normally open for business.
Target Date	28 March 2031
Subscription Period	means from 18 December 2025 to 17 March 2026 or such longer or shorter period, as may be determined by the Directors in accordance with the requirements of the Central Bank.
Dealing Deadline	means 11.59am (Irish time) one day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates up to the Target Date.
Dividend Payment Dates	Means, 24 March 2027, 22 March 2028, 28 March 2029, 27 March 2030 and 26 March 2031 or, if one of these dates is not a Business Day, the next day which is a Business Day.

Investment Objective and Policies

The investment objective of the Fund is to seek to achieve long-term capital appreciation and a dividend on each Dividend Payment Date, up to the Target Date.

The Fund is organised in such a manner that encompasses three distinct phases of the Fund, as explained in the subsequent subsections.

Phase 1: During the Subscription Period

During the Subscription Period, the Manager will invest principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

The reason for having a Subscription Period is to have a short period during which the Fund will accept subscriptions and invest them in a manner designed to seek to achieve a positive investment return whilst maintaining liquidity for the Fund. After the Subscription Period subscriptions into the Fund are no longer accepted. Although the Fund will be closed for subscriptions after the Subscription Period, requests for redemptions received prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day (i.e. each Business Day) in accordance with the section of the Prospectus entitled **"**Redemption of Shares".

Selection of direct investments

The instruments that may be part of the Initial Strategies will be selected based on the Manager's top-down analysis, which includes a view on the global investment outlook and analysis of market opportunities and securities based on an assessment of factors such as income yield, credit risk and bond duration. The Manager will assess each individual security and the bond markets to understand the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the securities under assessment. Following such credit assessment, the Manager appraises a potential investment in a security in terms of relative value when compared to other securities that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which instruments to acquire on behalf of the Fund. When an investment is made, it will be closely monitored by the Manager taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such instrument will be kept under review by the Manager. The Manager may invest substantially or fully in government bonds issued by any Member State.

As part of the Initial Strategies, the Fund may use the financial derivative instruments listed in the section of this Supplement headed "Types of Financial Derivative Instruments".

Phase 2: After the Subscription Period and up to the Target Date

Following the Subscription Period, the Fund will gradually reduce its allocation to the Initial Strategies up to the Target Date in the following manner:

1. It is anticipated that following the last day of the Subscription Period, and on a quarterly basis, the Fund's asset allocation to the Initial Strategies will reduce by 5 % of the Fund's assets. Each reduction will be followed by a corresponding investment by the Fund in the Longer Term Strategies (described at point 2 below)(the "Averaging Out").

   The Averaging Out process will occur every quarter following the last day of the Subscription Period for 60 months up to the Target Date. At the Target Date the Fund will be fully invested in the Longer Term Strategies.

   The Manager, based on their discretion, can alter the percentage disclosed above by decelerating or accelerating the reduction to the Initial Strategies according to their view of market conditions and to mitigate the risk of short-term price fluctuations in the market at or around each quarter period end. The Manager's view on market conditions will be informed by a proprietary quantitative model designed by the Manager which is described below (the "Quant Model") and/or by qualitative considerations that include macroeconomic conditions, valuations and risk sentiment.

This analysis of market conditions will inform the Manager as to whether and by how much they should accelerate or decelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies.

The proprietary Quant Model allows the Manager assess market conditions using quantifiable, definitive and numerical data that can be used for checking portfolio return robustness via historical simulations; i.e. it is analysis on documented and definitive information on the past performance of the relevant market. It is based on technical and market indicators such as the relative strength index which analyses the historical strength or weakness of a stock or market based on closing prices of a recent trading period.

2. As described above, every quarter following the last day of the Subscription Period, the exposure to the Initial Strategies will be reduced and an exposure will be obtained to a diversified portfolio of Underlying Funds as described in detail immediately below (the "Longer Term Strategies"). The Longer Term Strategies are made up of Underlying Funds that provide the Fund with a mixed exposure to certain asset classes while respecting the investment limits outlined below. This means that as part of the Longer Term Strategies the Fund:

    (1) may invest principally in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world. The types of equities the Fund may become exposed to, through its investments in Underlying Funds, include a broad range of large-cap, mid-cap, and small-cap equity securities. These may represent various sectors, geographic regions, or investment themes, in alignment with the specific investment strategies of the selected Underlying Funds;

    (2) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate;

    (3) may invest up to 15% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and

    (4) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

At the time of purchase of the debt securities either directly or via Underlying Funds, the Fund may only have a maximum exposure of 30% of its Net Asset Value to non-Investment Grade debt securities. Where a debt security ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security either directly or indirectly via Underlying Funds.

Selection of Underlying Funds

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which may make up the Initial Strategies and will make up the Longer Term Strategies.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in money market instruments, equity and debt securities' markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the

relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and
- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest in Underlying Funds which have a low cost such as passive index-tracking funds, for example ETF products and have a preference to invest in such low cost Underlying Funds.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

Any Fund assets directly held by the Fund (i.e. not held through Underlying Funds) will be listed or traded on Recognised Markets as set out in Schedule I of the Prospectus entitled "Recognised Markets". For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

The Fund may also invest directly up to 10% of its Net Asset Value in exchange traded commodities ("ETCs") being instruments that give investors indirect exposure to commodities in the form of certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movements of commodities – such as oil, gold and silver or a basket of commodities – and fluctuate in value based on the underlying commodity(ies).

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in alternative investment funds ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Phase 3: After the Target Date

At the Target Date, it is expected (subject to the Manager's discretion as disclosed above) that the Fund will be fully invested in the Longer Term Strategies.

This gradual exposure of Shareholders to the Longer Term Strategies allows Shareholders obtain a diversified exposure to the market while neutralizing the effect of short-term price fluctuations in the broader market.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or over the counter ("OTC") FDI for hedging, risk reduction, or investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDI, please refer to the "Risk Factors" section of the Prospectus.

Types of Financial Derivative Instruments

(i) futures contracts on dividends, bonds, interest rates, equity securities/basket of equity securities, equity/fixed income indices, or basket of equity/fixed income indices;
(ii) forwards on currencies and/or bonds;
(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices, (iii) futures;
(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, inflation-linked swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and
(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i) –(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio exposure. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities, equity indices or a basket of equity indices in order to provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value. When the Fund is using futures in these circumstances, the Fund would be taking a short position for risk reduction.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking such actions, the Fund may increase the duration of the Fund's bond portfolio exposure. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a

bond rises as interest rates fall. The Fund may engage in an interest rate swap transaction with the same purpose This strategy can be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit (i.e. the purchase and sale of an asset in order to profit from a difference in the asset's price between markets whilst ensuring that prices do not deviate substantially from fair value for long periods of time), to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets
e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use options and forwards on currencies ("FX forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Forwards

The Fund may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets which the Fund may hold or which the Fund may wish to buy.

Interest Rate Futures and Interest Rate Swaps

The Fund may use interest rate futures or interest rate swaps in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When interest rate futures or swaps are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market – based premium) in order to seek to protect the Fund against interest rate increases, reflecting the

Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

Inflation-linked Swaps

The Fund may use inflation-linked swaps to manage the inflation exposure and/or to mitigate the impact of inflation rate fluctuations on the Fund's portfolio. Unlike inflation swaps that involve exchange of payments at a fixed or floating rate in return for payments based on realized inflation, inflation-linked swaps involve payments that are directly tied to an inflation index, such as the Consumer Price Index (CPI).These payments adjust automatically in response to changes in the inflation rate. This mechanism provides the Fund with a dynamic tool to mitigate the impact of inflation rate fluctuations on the portfolio and to adapt its exposure based on anticipated inflation movements. Inflation-linked swaps may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

TRS

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivatives Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement – Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the MSCI World Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. The Index is an equity index designed to represent the performance of large and mid-cap stocks across 23 developed markets. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 350% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term and who wish to receive income up to the Target Date and who are willing to accept a moderate to high level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Dist	€100	From 4 December 2025 to 17 December 2025	Euro	No	No	€100 / €100	Distributing
Class A1 Dist	€100	From 4 December 2025 to 17 December 2025	Euro	No	No	€5,000,000 / €100	Distributing
Class L Dist	€100	From 4 December 2025 to 17 December 2025	Euro	No	Up to 1%	€100 / €100	Distributing
Class I Dist	€100	From 4 December 2025 to 17 December 2025	Euro	No	No	€1,000,000 / €100	Distributing
Class J Dist	€10,000	From 4 December2025 to 17 December 2025	Euro	No	No	€1,000,000 / €100	Distributing
Class P Dist	€10,000	From 4 December 2025 to 17 December 2025	Euro	No	No	€1,000 / €100	Distributing
Class A Acc	€100	From 4 December 2025 to 17 December 2025	Euro	No	No	€100 / €100	Accumulating

Class L Acc	€100	From 4 December 2025 to 17 December 2025	Euro	No	Up to 1%	€100 / €100	Accumulating

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a fee of up to 1.50 % per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 1% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

GLOBAL DEFENCE TARGET PASSIVE FINECO AM FUND VIII

SUPPLEMENT DATED 26 FEBRUARY 2026

This Supplement contains specific information in relation to **Global Defence Target Passive Fineco AM Fund VIII** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus of FAM Evolution ICAV dated 01 December 2022 and the addendum thereto (together the "Prospectus").

The Fund may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed nor a capital protected product. In seeking to achieve its investment objective, the Fund will at times, as described in greater detail below, invest directly or indirectly in a diversified portfolio of instruments and may enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund may bear credit risk in respect of its portfolio of instruments so that if one or more of the issuers of any of those instruments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day	means every Wednesday or if a particular Wednesday is not a day on which retail banks and securities markets in Luxembourg are normally open for business, the next following day on which retail banks and securities markets in Luxembourg are normally open for business.
Target Date	6 June 2031
Subscription Period	means from 10 March 2026 to 26 May 2026 or such longer or shorter period, as may be determined by the Directors in accordance with the requirements of the Central Bank.
Dealing Deadline	means 11.59am (Irish time) one day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates up to the Target Date.
Dividend Payment Dates	Means, 2 June 2027, 7 June 2028, 6 June 2029, 5 June 2030 and 4 June 2031 or, if one of these dates is not a Business Day, the next day which is a Business Day.

Investment Objective and Policies

The investment objective of the Fund is to seek to achieve long-term capital appreciation and a dividend on each Dividend Payment Date, up to the Target Date.

The Fund is organised in such a manner that encompasses three distinct phases of the Fund, as explained in the subsequent subsections.

Phase 1: During the Subscription Period

During the Subscription Period, the Manager will invest principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

The reason for having a Subscription Period is to have a short period during which the Fund will accept subscriptions and invest them in a manner designed to seek to achieve a positive investment return whilst maintaining liquidity for the Fund. After the Subscription Period subscriptions into the Fund are no longer accepted. Although the Fund will be closed for subscriptions after the Subscription Period, requests for redemptions received prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day (i.e. each Business Day) in accordance with the section of the Prospectus entitled **"**Redemption of Shares".

Selection of direct investments

The instruments that may be part of the Initial Strategies will be selected based on the Manager's top-down analysis, which includes a view on the global investment outlook and analysis of market opportunities and securities based on an assessment of factors such as income yield, credit risk and bond duration. The Manager will assess each individual security and the bond markets to understand the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the securities under assessment. Following such credit assessment, the Manager appraises a potential investment in a security in terms of relative value when compared to other securities that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which instruments to acquire on behalf of the Fund. When an investment is made, it will be closely monitored by the Manager taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such instrument will be kept under review by the Manager. The Manager may invest substantially or fully in government bonds issued by any Member State.

As part of the Initial Strategies, the Fund may use the financial derivative instruments listed in the section of this Supplement headed "Types of Financial Derivative Instruments".

Phase 2: After the Subscription Period and up to the Target Date

Following the Subscription Period, the Fund will gradually reduce its allocation to the Initial Strategies up to the Target Date in the following manner:

1. It is anticipated that following the last day of the Subscription Period, and on a quarterly basis, the Fund's asset allocation to the Initial Strategies will reduce by 5 % of the Fund's assets. Each reduction will be followed by a corresponding investment by the Fund in the Longer Term Strategies (described at point 2 below)(the "Averaging Out").

   The Averaging Out process will occur every quarter following the last day of the Subscription Period for 60 months up to the Target Date. At the Target Date the Fund will be fully invested in the Longer Term Strategies.

   The Manager, based on their discretion, can alter the percentage disclosed above by decelerating or accelerating the reduction to the Initial Strategies according to their view of market conditions and to mitigate the risk of short-term price fluctuations in the market at or around each quarter period end. The Manager's view on market conditions will be informed by a proprietary quantitative model designed by the Manager which is described below (the "Quant Model") and/or by qualitative considerations that include macroeconomic conditions, valuations and risk sentiment.

This analysis of market conditions will inform the Manager as to whether and by how much they should accelerate or decelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies.

The proprietary Quant Model allows the Manager assess market conditions using quantifiable, definitive and numerical data that can be used for checking portfolio return robustness via historical simulations; i.e. it is analysis on documented and definitive information on the past performance of the relevant market. It is based on technical and market indicators such as the relative strength index which analyses the historical strength or weakness of a stock or market based on closing prices of a recent trading period.

2. As described above, every quarter following the last day of the Subscription Period, the exposure to the Initial Strategies will be reduced and an exposure will be obtained to a diversified portfolio of Underlying Funds as described in detail immediately below (the "Longer Term Strategies"). The Longer Term Strategies are made up of Underlying Funds that provide the Fund with a mixed exposure to certain asset classes while respecting the investment limits outlined below. This means that as part of the Longer Term Strategies the Fund:

    (1) may invest principally in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world. The types of equities the Fund may become exposed to, through its investments in Underlying Funds, include a broad range of large-cap, mid-cap, and small-cap equity securities. These may represent various sectors, geographic regions, or investment themes, in alignment with the specific investment strategies of the selected Underlying Funds;

    (2) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate;

    (3) may invest up to 15% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and

    (4) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

At the time of purchase of the debt securities either directly or via Underlying Funds, the Fund may only have a maximum exposure of 30% of its Net Asset Value to non-Investment Grade debt securities. Where a debt security ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security either directly or indirectly via Underlying Funds.

Selection of Underlying Funds

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which may make up the Initial Strategies and will make up the Longer Term Strategies.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in money market instruments, equity and debt securities' markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the

relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and
- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest in Underlying Funds which have a low cost such as passive index-tracking funds, for example ETF products and have a preference to invest in such low cost Underlying Funds.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

Any Fund assets directly held by the Fund (i.e. not held through Underlying Funds) will be listed or traded on Recognised Markets as set out in Schedule I of the Prospectus entitled "Recognised Markets". For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

The Fund may also invest directly up to 10% of its Net Asset Value in exchange traded commodities ("ETCs") being instruments that give investors indirect exposure to commodities in the form of certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movements of commodities – such as oil, gold and silver or a basket of commodities – and fluctuate in value based on the underlying commodity(ies).

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in alternative investment funds ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Phase 3: After the Target Date

At the Target Date, it is expected (subject to the Manager's discretion as disclosed above) that the Fund will be fully invested in the Longer Term Strategies.

This gradual exposure of Shareholders to the Longer Term Strategies allows Shareholders obtain a diversified exposure to the market while neutralizing the effect of short-term price fluctuations in the broader market.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or over the counter ("OTC") FDI for hedging, risk reduction, or investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDI, please refer to the "Risk Factors" section of the Prospectus.

Types of Financial Derivative Instruments

(i) futures contracts on dividends, bonds, interest rates, equity securities/basket of equity securities, equity/fixed income indices, or basket of equity/fixed income indices;
(ii) forwards on currencies and/or bonds;
(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices, (iii) futures;
(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, inflation-linked swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and
(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i) –(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio exposure. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities, equity indices or a basket of equity indices in order to provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value. When the Fund is using futures in these circumstances, the Fund would be taking a short position for risk reduction.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking such actions, the Fund may increase the duration of the Fund's bond portfolio exposure. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a

bond rises as interest rates fall. The Fund may engage in an interest rate swap transaction with the same purpose This strategy can be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit (i.e. the purchase and sale of an asset in order to profit from a difference in the asset's price between markets whilst ensuring that prices do not deviate substantially from fair value for long periods of time), to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets
e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use options and forwards on currencies ("FX forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Forwards

The Fund may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets which the Fund may hold or which the Fund may wish to buy.

Interest Rate Futures and Interest Rate Swaps

The Fund may use interest rate futures or interest rate swaps in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When interest rate futures or swaps are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market – based premium) in order to seek to protect the Fund against interest rate increases, reflecting the

Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

Inflation-linked Swaps

The Fund may use inflation-linked swaps to manage the inflation exposure and/or to mitigate the impact of inflation rate fluctuations on the Fund's portfolio. Unlike inflation swaps that involve exchange of payments at a fixed or floating rate in return for payments based on realized inflation, inflation-linked swaps involve payments that are directly tied to an inflation index, such as the Consumer Price Index (CPI).These payments adjust automatically in response to changes in the inflation rate. This mechanism provides the Fund with a dynamic tool to mitigate the impact of inflation rate fluctuations on the portfolio and to adapt its exposure based on anticipated inflation movements. Inflation-linked swaps may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

TRS

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivatives Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement – Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the MSCI World Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. The Index is an equity index designed to represent the performance of large and mid-cap stocks across 23 developed markets. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 350% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term and who wish to receive income up to the Target Date and who are willing to accept a moderate to high level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Dist	€100	From 27 February 2026 to 9 March 2026	Euro	No	No	€100 / €100	Distributing
Class A1 Dist	€100	From 27 February 2026 to 9 March 2026	Euro	No	No	€5,000,000 / €100	Distributing
Class L Dist	€100	From 27 February 2026 to 9 March 2026	Euro	No	Up to 1%	€100 / €100	Distributing
Class I Dist	€100	From 27 February 2026 to 9 March 2026	Euro	No	No	€1,000,000 / €100	Distributing
Class J Dist	€10,000	From 27 February 2026 to 9 March 2026	Euro	No	No	€1,000,000 / €100	Distributing
Class P Dist	€10,000	From 27 February 2026 to 9 March 2026	Euro	No	No	€1,000 / €100	Distributing
Class A Acc	€100	From 27 February 2026 to 9 March 2026	Euro	No	No	€100 / €100	Accumulating

Class L Acc	€100	From 27 February 2026 to 9 March 2026	Euro	No	Up to 1%	€100 / €100	Accumulating

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a fee of up to 1.50 % per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 1% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

GLOBAL DEFENCE TARGET PASSIVE FINECO AM FUND IX

SUPPLEMENT DATED 7 MAY 2026

This Supplement contains specific information in relation to **Global Defence Target Passive Fineco AM Fund IX** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus of FAM Evolution ICAV dated 01 December 2022 and any addendum thereto (together the "Prospectus").

The Fund may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed nor a capital protected product. In seeking to achieve its investment objective, the Fund will at times, as described in greater detail below, invest directly or indirectly in a diversified portfolio of instruments and may enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund may bear credit risk in respect of its portfolio of instruments so that if one or more of the issuers of any of those instruments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day	means every Wednesday or if a particular Wednesday is not a day on which retail banks and securities markets in Luxembourg are normally open for business, the next following day on which retail banks and securities markets in Luxembourg are normally open for business.
Target Date	1 August 2031
Subscription Period	means from 11 May 2026 to 21 July 2026 or such longer or shorter period, as may be determined by the Directors in accordance with the requirements of the Central Bank.
Dealing Deadline	means 11.59am (Irish time) one day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates up to the Target Date.
Dividend Payment Dates	Means 28 July 2027, 26 July 2028, 25 July 2029, 24 July 2030 and 30 July 2031 or, if one of these dates is not a Business Day, the next day which is a Business Day.

Investment Objective and Policies

The investment objective of the Fund is to seek to achieve long-term capital appreciation and a dividend on each Dividend Payment Date, up to the Target Date.

The Fund is organised in such a manner that encompasses three distinct phases of the Fund, as explained in the subsequent subsections.

Phase 1: During the Subscription Period

During the Subscription Period, the Manager will invest principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

The reason for having a Subscription Period is to have a short period during which the Fund will accept subscriptions and invest them in a manner designed to seek to achieve a positive investment return whilst maintaining liquidity for the Fund. After the Subscription Period subscriptions into the Fund are no longer accepted. Although the Fund will be closed for subscriptions after the Subscription Period, requests for redemptions received prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day (i.e. each Business Day) in accordance with the section of the Prospectus entitled **"**Redemption of Shares".

Selection of direct investments

The instruments that may be part of the Initial Strategies will be selected based on the Manager's top-down analysis, which includes a view on the global investment outlook and analysis of market opportunities and securities based on an assessment of factors such as income yield, credit risk and bond duration. The Manager will assess each individual security and the bond markets to understand the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the securities under assessment. Following such credit assessment, the Manager appraises a potential investment in a security in terms of relative value when compared to other securities that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which instruments to acquire on behalf of the Fund. When an investment is made, it will be closely monitored by the Manager taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such instrument will be kept under review by the Manager. The Manager may invest substantially or fully in government bonds issued by any Member State.

As part of the Initial Strategies, the Fund may use the financial derivative instruments listed in the section of this Supplement headed "Types of Financial Derivative Instruments".

Phase 2: After the Subscription Period and up to the Target Date

Following the Subscription Period, the Fund will gradually reduce its allocation to the Initial Strategies up to the Target Date in the following manner:

1. It is anticipated that following the last day of the Subscription Period, and on a quarterly basis, the Fund's asset allocation to the Initial Strategies will reduce by 5 % of the Fund's assets. Each reduction will be followed by a corresponding investment by the Fund in the Longer Term Strategies (described at point 2 below)(the "Averaging Out").

   The Averaging Out process will occur every quarter following the last day of the Subscription Period for 60 months up to the Target Date. At the Target Date the Fund will be fully invested in the Longer Term Strategies.

   The Manager, based on their discretion, can alter the percentage disclosed above by decelerating or accelerating the reduction to the Initial Strategies according to their view of market conditions and to mitigate the risk of short-term price fluctuations in the market at or around each quarter period end. The Manager's view on market conditions will be informed by a proprietary quantitative model designed by the Manager which is described below (the "Quant Model") and/or by qualitative considerations that include macroeconomic conditions, valuations and risk sentiment.

This analysis of market conditions will inform the Manager as to whether and by how much they should accelerate or decelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies.

The proprietary Quant Model allows the Manager assess market conditions using quantifiable, definitive and numerical data that can be used for checking portfolio return robustness via historical simulations; i.e. it is analysis on documented and definitive information on the past performance of the relevant market. It is based on technical and market indicators such as the relative strength index which analyses the historical strength or weakness of a stock or market based on closing prices of a recent trading period.

2. As described above, every quarter following the last day of the Subscription Period, the exposure to the Initial Strategies will be reduced and an exposure will be obtained to a diversified portfolio of Underlying Funds as described in detail immediately below (the "Longer Term Strategies"). The Longer Term Strategies are made up of Underlying Funds that provide the Fund with a mixed exposure to certain asset classes while respecting the investment limits outlined below. This means that as part of the Longer Term Strategies the Fund:

    (1) may invest principally in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world. The types of equities the Fund may become exposed to, through its investments in Underlying Funds, include a broad range of large-cap, mid-cap, and small-cap equity securities. These may represent various sectors, geographic regions, or investment themes, in alignment with the specific investment strategies of the selected Underlying Funds;

    (2) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate;

    (3) may invest up to 15% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and

    (4) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

At the time of purchase of the debt securities either directly or via Underlying Funds, the Fund may only have a maximum exposure of 30% of its Net Asset Value to non-Investment Grade debt securities. Where a debt security ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security either directly or indirectly via Underlying Funds.

Selection of Underlying Funds

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which may make up the Initial Strategies and will make up the Longer Term Strategies.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in money market instruments, equity and debt securities' markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the

relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and
- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest in Underlying Funds which have a low cost such as passive index-tracking funds, for example ETF products and have a preference to invest in such low cost Underlying Funds.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

Any Fund assets directly held by the Fund (i.e. not held through Underlying Funds) will be listed or traded on Recognised Markets as set out in Schedule I of the Prospectus entitled "Recognised Markets". For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

The Fund may also invest directly up to 10% of its Net Asset Value in exchange traded commodities ("ETCs") being instruments that give investors indirect exposure to commodities in the form of certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movements of commodities – such as oil, gold and silver or a basket of commodities – and fluctuate in value based on the underlying commodity(ies).

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in alternative investment funds ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Phase 3: After the Target Date

At the Target Date, it is expected (subject to the Manager's discretion as disclosed above) that the Fund will be fully invested in the Longer Term Strategies.

This gradual exposure of Shareholders to the Longer Term Strategies allows Shareholders obtain a diversified exposure to the market while neutralizing the effect of short-term price fluctuations in the broader market.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or over the counter ("OTC") FDI for hedging, risk reduction, or investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDI, please refer to the "Risk Factors" section of the Prospectus.

Types of Financial Derivative Instruments

(i) futures contracts on dividends, bonds, interest rates, equity securities/basket of equity securities, equity/fixed income indices, or basket of equity/fixed income indices;
(ii) forwards on currencies and/or bonds;
(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices, (iii) futures;
(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, inflation-linked swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and
(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i) –(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio exposure. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities, equity indices or a basket of equity indices in order to provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value. When the Fund is using futures in these circumstances, the Fund would be taking a short position for risk reduction.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking such actions, the Fund may increase the duration of the Fund's bond portfolio exposure. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a

bond rises as interest rates fall. The Fund may engage in an interest rate swap transaction with the same purpose This strategy can be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit (i.e. the purchase and sale of an asset in order to profit from a difference in the asset's price between markets whilst ensuring that prices do not deviate substantially from fair value for long periods of time), to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets
e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use options and forwards on currencies ("FX forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce riskas described in detail in this paragraph.

Forwards

The Fund may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets which the Fund may hold or which the Fund may wish to buy.

Interest Rate Futures and Interest Rate Swaps

The Fund may use interest rate futures or interest rate swaps in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When interest rate futures or swaps are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market – based premium) in order to seek to protect the Fund against interest rate increases, reflecting the

Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

Inflation-linked Swaps

The Fund may use inflation-linked swaps to manage the inflation exposure and/or to mitigate the impact of inflation rate fluctuations on the Fund's portfolio. Unlike inflation swaps that involve exchange of payments at a fixed or floating rate in return for payments based on realized inflation, inflation-linked swaps involve payments that are directly tied to an inflation index, such as the Consumer Price Index (CPI).These payments adjust automatically in response to changes in the inflation rate. This mechanism provides the Fund with a dynamic tool to mitigate the impact of inflation rate fluctuations on the portfolio and to adapt its exposure based on anticipated inflation movements. Inflation-linked swaps may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e. €100 minus the recovery value of the underlying reference asset).

TRS

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivatives Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement – Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the MSCI World Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. The Index is an equity index designed to represent the performance of large and mid-cap stocks across 23 developed markets. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 350% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term and who wish to receive income up to the Target Date and who are willing to accept a moderate to high level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Dist	€100	From 8 May 2026 to 8 May 2026	Euro	No	No	€100 / €100	Distributing
Class A1 Dist	€100	From 8 May 2026 to 8 May 2026	Euro	No	No	€5,000,000 / €100	Distributing
Class L Dist	€100	From 8 May 2026 to 8 May 2026	Euro	No	Up to 1%	€100 / €100	Distributing
Class I Dist	€100	From 8 May 2026 to 8 May 2026	Euro	No	No	€1,000,000 / €100	Distributing
Class J Dist	€10,000	From 8 May 2026 to 8 May 2026	Euro	No	No	€1,000,000 / €100	Distributing
Class P Dist	€10,000	From 8 May 2026 to 8 May 2026	Euro	No	No	€1,000 / €100	Distributing
Class A Acc	€100	From 8 May 2026 to 8 May 2026	Euro	No	No	€100 / €100	Accumulating

Class L Acc	€100	From 8 May 2026 to 8 May 2026	Euro	No	Up to 1%	€100 / €100	Accumulating

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a fee of up to 1.50 % per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 1% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

GLOBAL DEFENCE TARGET PASSIVE FINECO AM FUND X

SUPPLEMENT DATED 13 AUGUST 2026

This Supplement contains specific information in relation to **Global Defence Target Passive Fineco AM Fund X** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus of FAM Evolution ICAV dated 01 December 2022 and any addendum thereto (together the "Prospectus").

The Fund may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed nor a capital protected product. In seeking to achieve its investment objective, the Fund will at times, as described in greater detail below, invest directly or indirectly in a diversified portfolio of instruments and may enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund may bear credit risk in respect of its portfolio of instruments so that if one or more of the issuers of any of those instruments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day	means every Wednesday or if a particular Wednesday is not a day on which retail banks and securities markets in Luxembourg are normally open for business, the next following day on which retail banks and securities markets in Luxembourg are normally open for business.
Target Date	21 November 2031
Subscription Period	means from 17 August 2026 to 10 November 2026 or such longer or shorter period, as may be determined by the Directors in accordance with the requirements of the Central Bank.
Dealing Deadline	means 11.59am (Irish time) one day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates up to the Target Date.
Dividend Payment Dates	Means 17 November 2027, 15 November 2028, 14 November 2029, 13 November 2030 and 19 November 2031 or, if one of these dates is not a Business Day, the next day which is a Business Day.

Investment Objective and Policies

The investment objective of the Fund is to seek to achieve long-term capital appreciation and a dividend on each Dividend Payment Date, up to the Target Date.

The Fund is organised in such a manner that encompasses three distinct phases of the Fund, as explained in the subsequent subsections.

Phase 1: During the Subscription Period

During the Subscription Period, the Manager will invest principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

The reason for having a Subscription Period is to have a short period during which the Fund will accept subscriptions and invest them in a manner designed to seek to achieve a positive investment return whilst maintaining liquidity for the Fund. After the Subscription Period subscriptions into the Fund are no longer accepted. Although the Fund will be closed for subscriptions after the Subscription Period, requests for redemptions received prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day (i.e. each Business Day) in accordance with the section of the Prospectus entitled **"**Redemption of Shares".

Selection of direct investments

The instruments that may be part of the Initial Strategies will be selected based on the Manager's top-down analysis, which includes a view on the global investment outlook and analysis of market opportunities and securities based on an assessment of factors such as income yield, credit risk and bond duration. The Manager will assess each individual security and the bond markets to understand the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the securities under assessment. Following such credit assessment, the Manager appraises a potential investment in a security in terms of relative value when compared to other securities that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which instruments to acquire on behalf of the Fund. When an investment is made, it will be closely monitored by the Manager taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such instrument will be kept under review by the Manager. The Manager may invest substantially or fully in government bonds issued by any Member State.

As part of the Initial Strategies, the Fund may use the financial derivative instruments listed in the section of this Supplement headed "Types of Financial Derivative Instruments".

Phase 2: After the Subscription Period and up to the Target Date

Following the Subscription Period, the Fund will gradually reduce its allocation to the Initial Strategies up to the Target Date in the following manner:

1. It is anticipated that following the last day of the Subscription Period, and on a quarterly basis, the Fund's asset allocation to the Initial Strategies will reduce by 5 % of the Fund's assets. Each reduction will be followed by a corresponding investment by the Fund in the Longer Term Strategies (described at point 2 below)(the "Averaging Out").

   The Averaging Out process will occur every quarter following the last day of the Subscription Period for 60 months up to the Target Date. At the Target Date the Fund will be fully invested in the Longer Term Strategies.

   The Manager, based on their discretion, can alter the percentage disclosed above by decelerating or accelerating the reduction to the Initial Strategies according to their view of market conditions and to mitigate the risk of short-term price fluctuations in the market at or around each quarter period end. The Manager's view on market conditions will be informed by a proprietary quantitative model designed by the Manager which is described below (the "Quant Model") and/or by qualitative considerations that include macroeconomic conditions, valuations and risk sentiment.

This analysis of market conditions will inform the Manager as to whether and by how much they should accelerate or decelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies.

The proprietary Quant Model allows the Manager assess market conditions using quantifiable, definitive and numerical data that can be used for checking portfolio return robustness via historical simulations; i.e. it is analysis on documented and definitive information on the past performance of the relevant market. It is based on technical and market indicators such as the relative strength index which analyses the historical strength or weakness of a stock or market based on closing prices of a recent trading period.

2. As described above, every quarter following the last day of the Subscription Period, the exposure to the Initial Strategies will be reduced and an exposure will be obtained to a diversified portfolio of Underlying Funds as described in detail immediately below (the "Longer Term Strategies"). The Longer Term Strategies are made up of Underlying Funds that provide the Fund with a mixed exposure to certain asset classes while respecting the investment limits outlined below. This means that as part of the Longer Term Strategies the Fund:

    (1) may invest principally in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world. The types of equities the Fund may become exposed to, through its investments in Underlying Funds, include a broad range of large-cap, mid-cap, and small-cap equity securities. These may represent various sectors, geographic regions, or investment themes, in alignment with the specific investment strategies of the selected Underlying Funds;

    (2) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate;

    (3) may invest up to 15% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and

    (4) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

At the time of purchase of the debt securities either directly or via Underlying Funds, the Fund may only have a maximum exposure of 30% of its Net Asset Value to non-Investment Grade debt securities. Where a debt security ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security either directly or indirectly via Underlying Funds.

Selection of Underlying Funds

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which may make up the Initial Strategies and will make up the Longer Term Strategies.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in money market instruments, equity and debt securities' markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the

relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and
- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest in Underlying Funds which have a low cost such as passive index-tracking funds, for example ETF products and have a preference to invest in such low cost Underlying Funds.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

Any Fund assets directly held by the Fund (i.e. not held through Underlying Funds) will be listed or traded on Recognised Markets as set out in Schedule I of the Prospectus entitled "Recognised Markets". For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

The Fund may also invest directly up to 10% of its Net Asset Value in exchange traded commodities ("ETCs") being instruments that give investors indirect exposure to commodities in the form of certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movements of commodities – such as oil, gold and silver or a basket of commodities – and fluctuate in value based on the underlying commodity(ies).

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in alternative investment funds ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Phase 3: After the Target Date

At the Target Date, it is expected (subject to the Manager's discretion as disclosed above) that the Fund will be fully invested in the Longer Term Strategies.

This gradual exposure of Shareholders to the Longer Term Strategies allows Shareholders obtain a diversified exposure to the market while neutralizing the effect of short-term price fluctuations in the broader market.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or over the counter ("OTC") FDI for hedging, risk reduction, or investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDI, please refer to the "Risk Factors" section of the Prospectus.

Types of Financial Derivative Instruments

(i) futures contracts on dividends, bonds, interest rates, equity securities/basket of equity securities, equity/fixed income indices, or basket of equity/fixed income indices;
(ii) forwards on currencies and/or bonds;
(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices, (iii) futures;
(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, inflation-linked swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and
(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i) –(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio exposure. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities, equity indices or a basket of equity indices in order to provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value. When the Fund is using futures in these circumstances, the Fund would be taking a short position for risk reduction.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking such actions, the Fund may increase the duration of the Fund's bond portfolio exposure. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a

bond rises as interest rates fall. The Fund may engage in an interest rate swap transaction with the same purpose This strategy can be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit (i.e. the purchase and sale of an asset in order to profit from a difference in the asset's price between markets whilst ensuring that prices do not deviate substantially from fair value for long periods of time), to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use options and forwards on currencies ("FX forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce riskas described in detail in this paragraph.

Forwards

The Fund may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets which the Fund may hold or which the Fund may wish to buy.

Interest Rate Futures and Interest Rate Swaps

The Fund may use interest rate futures or interest rate swaps in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When interest rate futures or swaps are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market – based premium) in order to seek to protect the Fund against interest rate increases, reflecting the

Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

Inflation-linked Swaps

The Fund may use inflation-linked swaps to manage the inflation exposure and/or to mitigate the impact of inflation rate fluctuations on the Fund's portfolio. Unlike inflation swaps that involve exchange of payments at a fixed or floating rate in return for payments based on realized inflation, inflation-linked swaps involve payments that are directly tied to an inflation index, such as the Consumer Price Index (CPI).These payments adjust automatically in response to changes in the inflation rate. This mechanism provides the Fund with a dynamic tool to mitigate the impact of inflation rate fluctuations on the portfolio and to adapt its exposure based on anticipated inflation movements. Inflation-linked swaps may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e.
€100 minus the recovery value of the underlying reference asset).

TRS

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivatives Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement – Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the MSCI World Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. The Index is an equity index designed to represent the performance of large and mid-cap stocks across 23 developed markets. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 350% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term and who wish to receive income up to the Target Date and who are willing to accept a moderate to high level of volatility.

SFDR Classification: Article 6 Fund. SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Dist	€100	From 14 August 2026 to 14 August 2026	Euro	No	No	€100 / €100	Distributing
Class A1 Dist	€100	From 14 August 2026 to 14 August 2026	Euro	No	No	€5,000,000 / €100	Distributing
Class L Dist	€100	From 14 August 2026 to 14 August 2026	Euro	No	Up to 1%	€100 / €100	Distributing
Class I Dist	€100	From 14 August 2026 to 14 August 2026	Euro	No	No	€1,000,000 / €100	Distributing
Class J Dist	€10,000	From 14 August 2026 to 14 August 2026	Euro	No	No	€1,000,000 / €100	Distributing
Class P Dist	€10,000	From 14 August 2026 to 14 August 2026	Euro	No	No	€1,000 / €100	Distributing
Class A Acc	€100	From 14 August 2026 to 14 August 2026	Euro	No	No	€100 / €100	Accumulating

Class L Acc	€100	From 14 August 2026 to 14 August 2026	Euro	No	Up to 1%	€100 / €100	Accumulating

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a fee of up to 1.50 % per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 1% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

TOP TWENTY CONSERVATIVE SELECTION FINECO AM FUND

SUPPLEMENT DATED 26 AUGUST 2026

This Supplement contains specific information in relation to **TOP TWENTY CONSERVATIVE SELECTION FINECO AM FUND** (the "**Fund**"), a sub- fund of **FAM Evolution ICAV** (the "**ICAV**"), an open-ended umbrella type Irish Collective Asset- management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 01 December 2022 and any addendum thereto (together the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Investment Objective and Policies

The investment objective of the Fund is to achieve medium to long-term capital appreciation.

The Fund seeks to achieve its investment objective by primarily investing its Net Asset Value in units of a diversified portfolio of Underlying Funds, which will be exchange-traded funds ("ETFs"). The Fund:

(1) is expected to have an exposure of up to 20% of its Net Asset Value in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world. In response to changing market conditions, the Fund may have an exposure of up to 30% of its Net Asset Value in such Underlying Funds, resulting in short-term deviations from the 20% level. Notwithstanding such deviations, the Manager will seek to implement a reset mechanism with the aim of bringing the equity exposure back to 20% over time;
(2) may invest up to 85% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non- Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate and cash, provided that exposure to non-Investment Grade will be limited to maximum 30% of the Net Asset Value of the Fund;
(3) may invest up to 25% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and
(4) may invest up to 30% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

The Manager will adjust the asset allocation, mentioned above, that the Fund holds based on the

investment selection analysis described below to the given market that such investments are in at a given point in time, adjusting the allocation between the asset classes referred to above in response to prevailing market conditions. Temporary fluctuations, outside of the Manager's control, from this range may from time to time occur. However, it is expected in stable market conditions that the Fund will gain exposure to a diversified portfolio composed approximately of 20% by value of equity securities and 80% by value of fixed income securities. This Fund will not have any particular industry or geographic focus.

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds.

The Manager selects the Underlying Funds from ETF issuers that meet the criteria of the Manager's proprietary in-house methodology. This methodology is a governance framework developed by the Manager which screens eligible ETF issuers against key deliverables that an issuer must demonstrate, such as the liquidity of the issuer's ETFs, the tightness and stability of their trading spreads, the overall quality of the issuer's product range and its historic performance. Using the above deliverables together with the following quantitative and qualitative criteria, the Manager shortlists the top twenty ETF issuers from which the ETFs are selected, and monitors those issuers on an ongoing basis, and in any event at least quarterly, to identify any potential deterioration in issuer quality.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in equity and debt securities' markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in non-UCITS (so-called "alternative investment funds"), therefore the primary focus will be investment in UCITS domiciled in the EU. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices,

(iv) futures;

(v) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(vi) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look- through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions" and further below in this Supplement under "Fees and Expenses".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements

Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 15% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to a benchmark composed of 80% of Bloomberg Euro Aggregate Index and 20% MSCI ACWI Net Total Return EUR Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the medium-to-long term who are willing to accept a low level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to either high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks;

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Acc	€10	27 August 2026 – 27 August 2026	Euro	No	No	€100 / €100	Accumulating
Class AH Acc	€10	27 August 2026 – 27 August 2026	Euro	No	Yes	€5,000,000 / €100	Accumulating
Class I Acc	€100	27 August 2026 – 27 August 2026	Euro	No	No	€1,000,000 / €100	Accumulating
Class A Dist	€10	27 August 2026 – 27 August 2026	Euro	No	No	€100 / €100	Distributing
Class AH Dist	€10	27 August 2026 – 27 August 2026	Euro	No	Yes	€5,000,000 / €100	Distributing
Class I Dist	€100	27 August 2026 – 27 August 2026	Euro	No	No	€1,000,000 / €100	Distributing

During the Initial Offer Period, Shares are available for subscription at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Definitions

Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of the Fund:

"Dealing Deadline" means 1:30pm (Irish time) on the Business Day prior to the relevant Dealing Day.

"Valuation Point" means 11.59pm (Irish time) on the relevant Dealing Day.

"Business Day" means a day (expect Saturday or Sunday and public holidays) on which retail banks and securities markets in London and Luxembourg are normally open for business.

"Dealing Day" In general, each Business Day will be a Dealing Day. However, certain Business Days will not be Dealing Days where, in the sole determination of the Directors, markets on which the Fund's investments are listed or traded are closed, provided that there is at least one Dealing Day per fortnight.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 1.50% per annum (plus VAT, if any) of

the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Securities Lending Agent's Fees
The Fund will retain at least 98% of the securities lending revenue generated, with up to 2% payable to the Securities Lending Agent (and/or to any sub-agent of the Securities Lending Agent) (plus VAT, if any) as a fee to cover the activities it carries out.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

TOP TWENTY BALANCED SELECTION FINECO AM FUND

SUPPLEMENT DATED 26 AUGUST 2026

This Supplement contains specific information in relation to **TOP TWENTY BALANCED SELECTION FINECO AM FUND** (the "**Fund**"), a sub-fund of **FAM Evolution ICAV** (the "**ICAV**"), an open-ended umbrella type Irish Collective Asset- management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 01 December 2022 and any addendum thereto (together the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Investment Objective and Policies

The investment objective of the Fund is to achieve medium to long-term capital appreciation.

The Fund seeks to achieve its investment objective by investing its Net Asset Value in units of a diversified portfolio of Underlying Funds, which will be exchange-traded funds ("ETFs"). The Fund:

(1) is expected to have an exposure of up to 60% of its Net Asset Value in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world. In response to changing market conditions, the Fund may have an exposure of up to 70% of its Net Asset Value in such Underlying Funds, resulting in short-term deviations from the 60% level. Notwithstanding such deviations, the Manager will seek to implement a reset mechanism with the aim of bringing the equity exposure back to 60% over time;
(2) may invest up to 50% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate, provided that exposure to non-Investment Grade will be limited to maximum 30% of the Net Asset Value of the Fund;
(3) may invest up to 25% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and
(4) may invest up to 30% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

The Manager will adjust the asset allocation, mentioned above, that the Fund holds based on the investment selection analysis described below to the given market that such investments are in at a given point in time, adjusting the allocation between the asset classes referred to above in response to prevailing market conditions. Temporary fluctuations, outside of the Manager's control, from this range may from time to time occur. However, it is expected in stable market conditions that the Fund will gain exposure to a diversified portfolio composed approximately of 60% by value of equity securities and 40% by value of fixed income securities. This Fund will not have any particular industry or geographic focus.

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds.

The Manager selects the Underlying Funds from ETF issuers that meet the criteria of the Manager's proprietary in-house methodology. This methodology is a governance framework developed by the

Manager which screens eligible ETF issuers against key deliverables that an issuer must demonstrate, such as the liquidity of the issuer's ETFs, the tightness and stability of their trading spreads, the overall quality of the issuer's product range and its historic performance. Using the above deliverables together with the following quantitative and qualitative criteria, the Manager shortlists the top twenty ETF issuers from which the ETFs are selected, and monitors those issuers on an ongoing basis, and in any event at least quarterly, to identify any potential deterioration in issuer quality.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in global equity markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in non-UCITS (so-called "alternative investment funds"), therefore the primary focus will be investment in UCITS domiciled in the EU. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns

and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond

rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e. a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions" and further below in this Supplement under "Fees and Expenses".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements

Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 15% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to a benchmark composed of 40% of Bloomberg Euro Aggregate Bond Index and 60% MSCI ACWI Net Total Return EUR Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the medium to long term who are willing to accept a low to medium level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to either high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks;

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great

Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	**Initial Offer Price**	**Initial Offer Period**	**Currency Denomination and Hedged Class**		**Sales Charge**	**Minimum Initial Subscription and Minimum Subsequent Subscription**	**Distribution Type**
Class A Acc	€10	27 August 2026 – 27 August 2026	Euro	No	No	€100 / €100	Accumulating
Class AH Acc	€10	27 August 2026 – 27 August 2026	Euro	No	Yes	€5,000,000 / €100	Accumulating
Class I Acc	€100	27 August 2026 – 27 August 2026	Euro	No	No	€1,000,000 / €100	Accumulating
Class A Dist	€10	27 August 2026 – 27 August 2026	Euro	No	No	€100 / €100	Distributing
Class AH Dist	€10	27 August 2026 – 27 August 2026	Euro	No	Yes	€5,000,000 / €100	Distributing
Class I Dist	€100	27 August 2026 – 27 August 2026	Euro	No	No	€1,000,000 / €100	Distributing

During the Initial Offer Period, Shares are available for subscription at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Definitions

Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of the Fund:

"Dealing Deadline" means 1:30pm (Irish time) on the Business Day prior to the relevant Dealing Day.

"Valuation Point" means 11.59pm (Irish time) on the relevant Dealing Day.

"**Business Day**" means a day (expect Saturday or Sunday and public holidays) on which retail banks and securities markets in London and Luxembourg are normally open for business.

"Dealing Day" In general, each Business Day will be a Dealing Day. However, certain Business Days will not be Dealing Days where, in the sole determination of the Directors, markets on which the Fund's investments are listed or traded are closed provided that there is at least one Dealing Day per fortnight.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 1.50% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Securities Lending Agent's Fees
The Fund will retain at least 98% of the securities lending revenue generated, with up to 2% payable to the Securities Lending Agent (and/or to any sub-agent of the Securities Lending Agent) (plus VAT, if any) as a fee to cover the activities it carries out.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

TOP TWENTY DYNAMIC SELECTION FINECO AM FUND

SUPPLEMENT DATED 26 AUGUST 2026

This Supplement contains specific information in relation to **TOP TWENTY DYNAMIC SELECTION FINECO AM FUND** (the "**Fund**"), a sub-fund of **FAM Evolution ICAV** (the "**ICAV**"), an open-ended umbrella type Irish Collective Asset- management Vehicle with variable capital and segregated liability between sub- funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the prospectus of FAM Evolution ICAV dated 01 December 2022 and any addendum thereto (together, the "Prospectus").

The Fund pursues a fund of funds approach and may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

Investment Objective and Policies

The investment objective of the Fund is to achieve medium to long-term capital appreciation.

The Fund seeks to achieve its investment objective by investing its Net Asset Value in units of a diversified portfolio of Underlying Funds, which will be exchange-traded funds ("ETFs"). The Fund:

(1) is expected to have an exposure of up to 100% in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world;
(2) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate;
(3) may invest up to 15% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and
(4) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

The Manager will adjust the asset allocation, mentioned above, that the Fund holds based on the investment selection analysis described below to the given market that such investments are in at a given point in time, adjusting the allocation between the asset classes referred to above in response to prevailing market conditions. Temporary fluctuations, outside of the Manager's control, from this range may from time to time occur. However, it is expected in stable market conditions that the Fund will gain full exposure to equity securities. This Fund will not have any particular industry or geographic focus.

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds.

The Manager selects the Underlying Funds from ETF issuers that meet the criteria of the Manager's proprietary in-house methodology. This methodology is a governance framework developed by the Manager which screens eligible ETF issuers against key deliverables that an issuer must demonstrate, such as the liquidity of the issuer's ETFs, the tightness and stability of their trading spreads, the overall quality of the issuer's product range and its historic performance. Using the above deliverables together

with the following quantitative and qualitative criteria, the Manager shortlists the top twenty ETF issuers from which the ETFs are selected, and monitors those issuers on an ongoing basis, and in any event at least quarterly, to identify any potential deterioration in issuer quality

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in global equity markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and

- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in non-UCITS (so-called "alternative investment funds"), therefore the primary focus will be investment in UCITS domiciled in the EU. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or OTC FDI for either: (i) hedging; (ii) risk reduction and (iii) investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments.

Types of Financial Derivative Instruments

For the above purposes, the Fund may use the following types of FDI on eligible assets in accordance with the Investment Objective and Policy of the Fund:

(i) futures contracts on dividends, bonds, interest rates, equity securities /basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices;

(ii) OTC forwards on currencies;

(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, (iii) futures;

(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and

(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i)-(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options, or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities/equity indices/basket of equity indices in order provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking these actions, the Fund may increase the duration of the Fund's bond portfolio. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a bond rises as interest rates fall.

The Fund may engage in an interest rate swap transaction with the same purpose. This strategy can also be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain

additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit, to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use Options and forwards on currencies ("FX Forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX Forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX Forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk so as to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Interest Rate Swaps ("IRS")

The Fund may use IRS in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When IRS are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market - based premium) in order to seek to protect the Fund against interest rate increases, reflecting the Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread at a lower cost than by direct investment. They can also be used in combination with futures contracts or government bonds to take a synthetic position, and/or to obtain or preserve a desired return or spread. Credit default swaps may also be used in order to gain additional exposure to credit risk. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer.

Total Return Swaps ("TRS")

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivative Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

In respect of the direct/indirect costs and fees arising from the use of TRS, please see the section in the main body of the Prospectus entitled "Securities Financing Transactions" and further below in this Supplement under "Fees and Expenses".

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

The expected maximum level of short derivative positions which the Fund may hold is 350% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Securities Lending Agreements

Securities lending is the temporary transfer of securities by a lender to a borrower, with agreement by the borrower to return equivalent securities to the lender at pre-agreed time. These agreements will only be used for efficient portfolio management to enhance overall returns to the Fund through the receipt of finance charges for the lending of its securities and are subject to the conditions and limits set out on the Central Bank UCITS Regulations. The Fund's exposure to securities lending transactions is expected to be 15% of the Fund's Net Asset Value, subject to a maximum exposure of 30% of the Fund's Net Asset Value.

Risk Measurement - Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and

volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the MSCI ACWI Net Total Return EUR Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 300% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile

The Fund is suitable for both institutional and retail investors seeking capital appreciation over the medium to long term who are willing to accept a medium level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). **While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to either high or low levels of Sustainability Risk.**

The Fund integrates Sustainability Risk into its investment decision making process using both quantitative and qualitative processes as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk and to identify how vulnerable the investment is to such risks;

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impact may result in an entire loss of value of the relevant

investment(s). The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure etc.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares

The following Classes of Shares are available for subscription:

Share Class	**Initial Offer Price**	**Initial Offer Period**	**Currency Denomination and Hedged Class**		**Sales Charge**	**Minimum Initial Subscription and Minimum Subsequent Subscription**	**Distribution Type**
Class A Acc	€10	27 August 2026 – 27 August 2026	Euro	No	No	€100 / €100	Accumulating
Class AH Acc	€10	27 August 2026 – 27 August 2026	Euro	No	Yes	€5,000,000/€100	Accumulating
Class I Acc	€100	27 August 2026 – 27 August 2026	Euro	No	No	€1,000,000 / €100	Accumulating
Class A Dist	€10	27 August 2026 – 27 August 2026	Euro	No	No	€100 / €100	Distributing
Class AH Dist	€10	27 August 2026 – 27 August 2026	Euro	No	Yes	€5,000,000 / €100	Distributing
Class I Dist	€100	27 August 2026 – 27 August 2026	Euro	No	No	€1,000,000 / €100	Distributing

During the Initial Offer Period Shares are available for subscription at the Initial Offer Price as indicated in the table above. Where the Initial Offer Period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Definitions

Investors should note the following Dealing Deadline and Valuation Point that shall apply in respect of the Fund:

"Dealing Deadline" means 1:30pm (Irish time) on the Business Day prior to the relevant Dealing Day.

"Valuation Point" means 11.59pm (Irish time) on the relevant Dealing Day.

"Business Day" means a day (except Saturday or Sunday and public holidays) on which retail banks and securities markets in London and Luxembourg are normally open for business.

"Dealing Day" In general, each Business Day will be a Dealing Day. However, certain Business Days will not be Dealing Days where, in the sole determination of the Directors, markets on which the Fund's investments are listed or traded are closed, provided that there is at least one Dealing Day per fortnight.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a management fee of up to 1.50% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Securities Lending Agent's Fees
The Fund will retain at least 98% of the securities lending revenue generated, with up to 2% payable to the Securities Lending Agent (and/or to any sub-agent of the Securities Lending Agent) (plus VAT, if any) as a fee to cover the activities it carries out.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €20,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

GLOBAL DEFENCE TARGET PASSIVE EMERGING MARKETS EQUITY FINECO AM FUND

SUPPLEMENT DATED 28 AUGUST 2026

This Supplement contains specific information in relation to **Global Defence Target Passive Emerging Markets Equity Fineco AM Fund** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus of FAM Evolution ICAV dated 01 December 2022 and any addendum thereto (together the "Prospectus").

The Fund may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed nor a capital protected product. In seeking to achieve its investment objective, the Fund will at times, as described in greater detail below, invest directly or indirectly in a diversified portfolio of instruments and may enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund may bear credit risk in respect of its portfolio of instruments so that if one or more of the issuers of any of those instruments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day	means every Wednesday or if a particular Wednesday is not a day on which retail banks and securities markets in Luxembourg are normally open for business, the next following day on which retail banks and securities markets in Luxembourg are normally open for business.
Target Date	21 November 2031
Subscription Period	means from 1 September 2026 to 10 November 2026 or such longer or shorter period, as may be determined by the Directors in accordance with the requirements of the Central Bank.
Dealing Deadline	means 11.59am (Irish time) one day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates up to the Target Date.
Dividend Payment Dates	Means 17 November 2027, 15 November 2028, 14 November 2029, 13 November 2030 and 19 November 2031 or, if one of these dates is not a Business Day, the next day which is a Business Day.

Investment Objective and Policies

The investment objective of the Fund is to seek to achieve long-term capital appreciation and a dividend on each Dividend Payment Date, up to the Target Date.

The Fund is organised in such a manner that encompasses three distinct phases of the Fund, as explained in the subsequent subsections.

Phase 1: During the Subscription Period

During the Subscription Period, the Manager will invest principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

The reason for having a Subscription Period is to have a short period during which the Fund will accept subscriptions and invest them in a manner designed to seek to achieve a positive investment return whilst maintaining liquidity for the Fund. After the Subscription Period subscriptions into the Fund are no longer accepted. Although the Fund will be closed for subscriptions after the Subscription Period, requests for redemptions received prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day (i.e. each Business Day) in accordance with the section of the Prospectus entitled **"**Redemption of Shares".

Selection of direct investments

The instruments that may be part of the Initial Strategies will be selected based on the Manager's top-down analysis, which includes a view on the global investment outlook and analysis of market opportunities and securities based on an assessment of factors such as income yield, credit risk and bond duration. The Manager will assess each individual security and the bond markets to understand the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the securities under assessment. Following such credit assessment, the Manager appraises a potential investment in a security in terms of relative value when compared to other securities that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which instruments to acquire on behalf of the Fund. When an investment is made, it will be closely monitored by the Manager taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such instrument will be kept under review by the Manager. The Manager may invest substantially or fully in government bonds issued by any Member State.

As part of the Initial Strategies, the Fund may use the financial derivative instruments listed in the section of this Supplement headed "Types of Financial Derivative Instruments".

Phase 2: After the Subscription Period and up to the Target Date

Following the Subscription Period, the Fund will gradually reduce its allocation to the Initial Strategies up to the Target Date in the following manner:

1. It is anticipated that following the last day of the Subscription Period, and on a quarterly basis, the Fund's asset allocation to the Initial Strategies will reduce by 5 % of the Fund's assets. Each reduction will be followed by a corresponding investment by the Fund in the Longer Term Strategies (described at point 2 below)(the "Averaging Out").

   The Averaging Out process will occur every quarter following the last day of the Subscription Period for 60 months up to the Target Date. At the Target Date the Fund will be fully invested in the Longer Term Strategies.

   The Manager, based on their discretion, can alter the percentage disclosed above by decelerating or accelerating the reduction to the Initial Strategies according to their view of market conditions and to mitigate the risk of short-term price fluctuations in the market at or around each quarter period end. The Manager's view on market conditions will be informed by a proprietary quantitative model designed by the Manager which is described below (the "Quant Model") and/or by qualitative considerations that include macroeconomic conditions, valuations and risk sentiment.

This analysis of market conditions will inform the Manager as to whether and by how much they should accelerate or decelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies.

The proprietary Quant Model allows the Manager assess market conditions using quantifiable, definitive and numerical data that can be used for checking portfolio return robustness via historical simulations; i.e. it is analysis on documented and definitive information on the past performance of the relevant market. It is based on technical and market indicators such as the relative strength index which analyses the historical strength or weakness of a stock or market based on closing prices of a recent trading period.

2. As described above, every quarter following the last day of the Subscription Period, the exposure to the Initial Strategies will be reduced and an exposure will be obtained to a diversified portfolio of Underlying Funds as described in detail immediately below (the "Longer Term Strategies"). The Longer Term Strategies are made up of Underlying Funds that provide the Fund with a mixed exposure to certain asset classes while respecting the investment limits outlined below. This means that as part of the Longer Term Strategies the Fund:

   (1) may invest principally in units of Underlying Funds that provide exposure to equities issued by companies incorporated in emerging markets. The types of equities the Fund may become exposed to, through its investments in Underlying Funds, include a broad range of large-cap, mid-cap, and small-cap equity securities. Emerging markets refer to countries that are considered by the Manager to be countries that are characterised as emerging by the World Bank, the United Nations, the International Finance Corporation, the European Bank for Reconstruction and Development, or are included in an emerging markets index by a recognised index provider. Whilst the Fund may invest in Underlying Funds made up of investments that have an exposure to China and India; the Fund will not itself invest in those jurisdictions. Up to 10% of the assets of the Fund may be invested in equities issued by companies incorporated anywhere in the world or in Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world.;

   (2) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate;

   (3) may invest up to 15% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and

   (4) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

At the time of purchase of the debt securities either directly or via Underlying Funds, the Fund may only have a maximum exposure of 30% of its Net Asset Value to non-Investment Grade debt securities. Where a debt security ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security either directly or indirectly via Underlying Funds.

Selection of Underlying Funds

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which may make up the Initial Strategies and will make up the Longer Term Strategies.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in money market instruments, equity and debt securities' markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from

an investment perspective. Due diligence will examine factors, including but not limited to, the investment policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and
- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest in Underlying Funds which have a low cost such as passive index-tracking funds, for example ETF products.

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

Any Fund assets directly held by the Fund (i.e. not held through Underlying Funds) will be listed or traded on Recognised Markets as set out in Schedule I of the Prospectus entitled "Recognised Markets". For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

The Fund may also invest directly up to 10% of its Net Asset Value in exchange traded commodities ("ETCs") being instruments that give investors indirect exposure to commodities in the form of certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movements of commodities – such as oil, gold and silver or a basket of commodities – and fluctuate in value based on the underlying commodity(ies).

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in alternative investment funds ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Phase 3: After the Target Date

At the Target Date, it is expected (subject to the Manager's discretion as disclosed above) that the Fund will be fully invested in the Longer Term Strategies.

This gradual exposure of Shareholders to the Longer Term Strategies allows Shareholders obtain a diversified exposure to the market while neutralizing the effect of short-term price fluctuations in the broader market.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or over the counter ("OTC") FDI for hedging, risk reduction, or investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDI, please refer to the "Risk Factors" section of the Prospectus.

Types of Financial Derivative Instruments

(i) futures contracts on dividends, bonds, interest rates, equity securities/basket of equity securities, equity/fixed income indices, or basket of equity/fixed income indices;
(ii) forwards on currencies and/or bonds;
(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices, (iii) futures;
(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, inflation-linked swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and
(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i) –(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio exposure. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities, equity indices or a basket of equity indices in order to provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value. When the Fund is using futures in these circumstances, the Fund would be taking a short position for risk reduction.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking such actions, the Fund may increase the duration of the Fund's bond portfolio exposure. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a

bond rises as interest rates fall. The Fund may engage in an interest rate swap transaction with the same purpose This strategy can be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit (i.e. the purchase and sale of an asset in order to profit from a difference in the asset's price between markets whilst ensuring that prices do not deviate substantially from fair value for long periods of time), to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets
e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use options and forwards on currencies ("FX forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce risk as described in detail in this paragraph.

Forwards

The Fund may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets which the Fund may hold or which the Fund may wish to buy.

Interest Rate Futures and Interest Rate Swaps

The Fund may use interest rate futures or interest rate swaps in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When interest rate futures or swaps are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market – based premium) in order to seek to protect the Fund against interest rate increases, reflecting the

Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

Inflation-linked Swaps

The Fund may use inflation-linked swaps to manage the inflation exposure and/or to mitigate the impact of inflation rate fluctuations on the Fund's portfolio. Unlike inflation swaps that involve exchange of payments at a fixed or floating rate in return for payments based on realized inflation, inflation-linked swaps involve payments that are directly tied to an inflation index, such as the Consumer Price Index (CPI).These payments adjust automatically in response to changes in the inflation rate. This mechanism provides the Fund with a dynamic tool to mitigate the impact of inflation rate fluctuations on the portfolio and to adapt its exposure based on anticipated inflation movements. Inflation-linked swaps may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e.
€100 minus the recovery value of the underlying reference asset).

TRS

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivatives Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement – Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the MSCI Emerging Markets Daily Net Total Return EUR Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. The Index is an equity index designed to represent the performance of large and mid-cap stocks across 24 emerging markets. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 350% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term and who wish to receive income up to the Target Date and who are willing to accept a moderate to high level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Dist	€100	From 31 August 2026 to 31 August 2026	Euro	No	No	€100 / €100	Distributing
Class A1 Dist	€100	From 31 August 2026 to 31 August 2026	Euro	No	No	€5,000,000 / €100	Distributing
Class L Dist	€100	From 31 August 2026 to 31 August 2026	Euro	No	Up to 1%	€100 / €100	Distributing
Class I Dist	€100	From 31 August 2026 to 31 August 2026	Euro	No	No	€1,000,000 / €100	Distributing
Class J Dist	€10,000	From 31 August 2026 to 31 August 2026	Euro	No	No	€1,000,000 / €100	Distributing
Class P Dist	€10,000	From 31 August 2026 to 31 August 2026	Euro	No	No	€1,000 / €100	Distributing
Class A Acc	€100	From 31 August 2026 to 31 August 2026	Euro	No	No	€100 / €100	Accumulating

Class L Acc	€100	From 31 August 2026 to 31 August 2026	Euro	No	Up to 1%	€100 / €100	Accumulating

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a fee of up to 1.50 % per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 1% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.

GLOBAL DEFENCE TARGET PASSIVE TECH LEADERS FINECO AM FUND

SUPPLEMENT DATED 28 AUGUST 2026

This Supplement contains specific information in relation to **Global Defence Target Passive Tech Leaders Fineco AM Fund** (the "Fund"), a sub-fund of **FAM Evolution ICAV** (the "ICAV"), an open-ended umbrella type Irish Collective Asset-management Vehicle with variable capital and segregated liability between sub-funds, authorised by the Central Bank on 11 December 2018 pursuant to the UCITS Regulations.

This Supplement forms part of and should be read in conjunction with the Prospectus of FAM Evolution ICAV dated 01 December 2022 and any addendum thereto (together the "Prospectus").

The Fund may invest principally in Underlying Funds in such proportions as the Manager deems appropriate from time to time. An investment in the Fund should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.

There can be no guarantee that the investment objective will actually be attained and investors are explicitly warned that the Fund is not a capital guaranteed nor a capital protected product. In seeking to achieve its investment objective, the Fund will at times, as described in greater detail below, invest directly or indirectly in a diversified portfolio of instruments and may enter into one or more financial derivative transactions. However, Shareholders must understand that the Fund may bear credit risk in respect of its portfolio of instruments so that if one or more of the issuers of any of those instruments default, the investment objective may not be achieved. Similarly, the Fund bears credit risk in respect of OTC counterparties to its financial derivative transactions, default by any of which on its contractual obligations may mean that the investment objective may not be achieved. Due to the composition of the Fund's investments, the Fund's portfolio may be more concentrated geographically and/or sectorally than other investment funds with more diversified portfolios.

Interpretation and Definitions

Defined terms used in this Supplement will bear the meaning given to them in the Prospectus or shall have the meaning given to them in this Supplement. In the event of any inconsistency between the Prospectus and this Supplement, the terms of this Supplement will prevail.

Business Day	means every Wednesday or if a particular Wednesday is not a day on which retail banks and securities markets in Luxembourg are normally open for business, the next following day on which retail banks and securities markets in Luxembourg are normally open for business.
Target Date	21 November 2031
Subscription Period	means from 1 September 2026 to 10 November 2026 or such longer or shorter period, as may be determined by the Directors in accordance with the requirements of the Central Bank.
Dealing Deadline	means 11.59am (Irish time) one day before the relevant Dealing Day, provided always that the Dealing Deadline shall not be later than the Valuation Point.
Dividend:	Means 0.5% of the Net Asset Value per Share published as at the last Day of the Subscription Period, being the minimum dividend which will be paid by the Fund on the Dividend Payment Dates up to the Target Date.
Dividend Payment Dates	Means 17 November 2027, 15 November 2028, 14 November 2029, 13 November 2030 and 19 November 2031 or, if one of these dates is not a Business Day, the next day which is a Business Day.

Investment Objective and Policies

The investment objective of the Fund is to seek to achieve long-term capital appreciation and a dividend on each Dividend Payment Date, up to the Target Date.

The Fund is organised in such a manner that encompasses three distinct phases of the Fund, as explained in the subsequent subsections.

Phase 1: During the Subscription Period

During the Subscription Period, the Manager will invest principally, either directly, or indirectly via units of Underlying Funds, in short, medium and/or long term instruments, such as certificates of deposit, commercial paper, treasury bills, banker's acceptances and fixed and/or floating rate transferable debt securities of both Investment and non-Investment Grade (including corporate debt securities, bonds and notes, zero-coupon and discount bonds, debentures) issued by sovereign, government agencies, supranational entities and/or corporate issuers worldwide (the "Initial Strategies").

The reason for having a Subscription Period is to have a short period during which the Fund will accept subscriptions and invest them in a manner designed to seek to achieve a positive investment return whilst maintaining liquidity for the Fund. After the Subscription Period subscriptions into the Fund are no longer accepted. Although the Fund will be closed for subscriptions after the Subscription Period, requests for redemptions received prior to the Dealing Deadline for any Dealing Day will be processed on that Dealing Day (i.e. each Business Day) in accordance with the section of the Prospectus entitled **"**Redemption of Shares".

Selection of direct investments

The instruments that may be part of the Initial Strategies will be selected based on the Manager's top-down analysis, which includes a view on the global investment outlook and analysis of market opportunities and securities based on an assessment of factors such as income yield, credit risk and bond duration. The Manager will assess each individual security and the bond markets to understand the probability of losses being accrued, the bond issuers defaulting on the payment of interest and the performance outlook for the securities under assessment. Following such credit assessment, the Manager appraises a potential investment in a security in terms of relative value when compared to other securities that could be invested in. In this regard, the Manager focuses on relative price, liquidity and risk premium for the purposes of determining which instruments to acquire on behalf of the Fund. When an investment is made, it will be closely monitored by the Manager taking into account the credit analysis outlined above, and the investment rationale for retaining the investment in such instrument will be kept under review by the Manager. The Manager may invest substantially or fully in government bonds issued by any Member State.

As part of the Initial Strategies, the Fund may use the financial derivative instruments listed in the section of this Supplement headed "Types of Financial Derivative Instruments".

Phase 2: After the Subscription Period and up to the Target Date

Following the Subscription Period, the Fund will gradually reduce its allocation to the Initial Strategies up to the Target Date in the following manner:

1. It is anticipated that following the last day of the Subscription Period, and on a quarterly basis, the Fund's asset allocation to the Initial Strategies will reduce by 5 % of the Fund's assets. Each reduction will be followed by a corresponding investment by the Fund in the Longer Term Strategies (described at point 2 below)(the "Averaging Out").

   The Averaging Out process will occur every quarter following the last day of the Subscription Period for 60 months up to the Target Date. At the Target Date the Fund will be fully invested in the Longer Term Strategies.

   The Manager, based on their discretion, can alter the percentage disclosed above by decelerating or accelerating the reduction to the Initial Strategies according to their view of market conditions and to mitigate the risk of short-term price fluctuations in the market at or around each quarter period end. The Manager's view on market conditions will be informed by a proprietary quantitative model designed by the Manager which is described below (the "Quant Model") and/or by qualitative considerations that include macroeconomic conditions, valuations and risk sentiment.

This analysis of market conditions will inform the Manager as to whether and by how much they should accelerate or decelerate the reduction of the Fund's exposure to the Initial Strategies, and in turn gain a corresponding exposure to the Longer Term Strategies.

The proprietary Quant Model allows the Manager assess market conditions using quantifiable, definitive and numerical data that can be used for checking portfolio return robustness via historical simulations; i.e. it is analysis on documented and definitive information on the past performance of the relevant market. It is based on technical and market indicators such as the relative strength index which analyses the historical strength or weakness of a stock or market based on closing prices of a recent trading period.

2. As described above, every quarter following the last day of the Subscription Period, the exposure to the Initial Strategies will be reduced and an exposure will be obtained to a diversified portfolio of Underlying Funds as described in detail immediately below (the "Longer Term Strategies"). The Longer Term Strategies are made up of Underlying Funds that provide the Fund with a mixed exposure to certain asset classes while respecting the investment limits outlined below. This means that as part of the Longer Term Strategies the Fund:

    (1) may invest principally in units of Underlying Funds that provide exposure to equities issued by companies incorporated anywhere in the world that are engaged in the information technology sector. The types of equities the Fund may become exposed to, through its investments in Underlying Funds, include a broad range of large-cap, mid-cap, and small-cap equity securities issued by companies within the information technology industry working in areas such as software, hardware, semiconductors, internet-related services, and emerging technologies. The term "Tech Leaders" refers to companies that the Manager considers to hold a leading or dominant position within the information technology sector, or a relevant sub-sector thereof, based on factors such as market capitalisation, revenue or earnings scale, market share, brand recognition, and/or technological innovation relative to their industry peers;;

    (2) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to government or corporate debt securities of Investment Grade and/or non-Investment Grade (for example, treasury bonds, corporate bonds, government bonds, municipal bonds and commercial paper) with a fixed or floating rate;

    (3) may invest up to 15% of its Net Asset Value in units of Underlying Funds that are managed with absolute return/alternative investment strategies. Absolute return strategies may invest in a broad range of assets including financial derivative instruments, currencies, and assets that may provide the Fund with an indirect exposure to commodities (in accordance with the UCITS Regulations and the Central Bank UCITS Regulations) in seeking to provide an absolute return in all market environments (i.e. generating consistent positive returns that are not necessarily dependent upon continuous rising markets) hence reducing the downside risks of investment. The absolute return strategies are subject to strict liquidity, transparency, diversification, regulatory and risk management oversight and requirements. Alternative investment strategies are strategies that have a low correlation with fixed income/equity strategies and may provide the Fund with an indirect exposure to commodities via Underlying Funds; and

    (4) may invest up to 10% of its Net Asset Value in units of Underlying Funds which provide an exposure to money market instruments, such as certificates of deposit, commercial paper, treasury bills, and banker's acceptances.

At the time of purchase of the debt securities either directly or via Underlying Funds, the Fund may only have a maximum exposure of 30% of its Net Asset Value to non-Investment Grade debt securities. Where a debt security ceases to be rated or its rating is reduced to below Investment Grade following its purchase, the Manager will consider such event in determining whether the Fund should continue to hold the security either directly or indirectly via Underlying Funds.

Selection of Underlying Funds

The Manager actively manages the weighting of the Net Asset Value of the Fund between the Underlying Funds which may make up the Initial Strategies and will make up the Longer Term Strategies.

The Manager will select the Underlying Funds by analysing the universe of relevant Underlying Funds, which have a focus on investing in money market instruments, equity and debt securities' markets, as mentioned above. The Manager will narrow down the universe of Underlying Funds on which investment due diligence will be carried out in order to establish which Underlying Funds are appropriate for inclusion in the Fund from an investment perspective. Due diligence will examine factors, including but not limited to, the investment

policy and objectives, performance track record, investment strategy and process of the Underlying Funds, as well as the team structure and risk management processes employed by the Underlying Funds' investment managers. As part of this analysis (i.e. quantitative and qualitative analysis as further detailed below), the Manager will, amongst other things, check for any liquidity issues, investment risk issues and the impact of the proposed investments on the Fund. The Manager will at all times consider the risk/reward trade-off (i.e. the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment, where higher risk is associated with greater probability of higher return and lower risk with a greater probability of smaller return) associated with any investment/proposed investment and will attempt to achieve a satisfactory balance of risk and reward, in line with the Fund's investment objective. The Manager may seek to benchmark any potential investment under analysis against other opportunities in the marketplace, in order to ascertain the relative merits of the investment opportunity. Both quantitative and qualitative analysis will be considered in the evaluation, selection and on-going monitoring of Underlying Funds and their investment managers:

- quantitative analysis includes the evaluation of various metrics such as an Underlying Fund's risk adjusted returns, performance consistency correlation (i.e. the regularity with which a particular investment manager outperforms their benchmark index or the market index over specific time periods), up/down market capture (i.e. the overall performance of an investment manager of an Underlying Fund in up and/or down market conditions), active share (i.e. a measure of the percentage of holdings in a portfolio that differ from the relevant benchmark or market index), tracking error (i.e. the standard deviation percentage difference between the performance of an Underlying Fund and its relevant benchmark or market index) and expense ratio; and
- qualitative analysis involves collecting information on Underlying Funds that will allow the Manager to estimate the future performance of Underlying Funds and their investment managers. Examples of such qualitative analysis include carrying out on-site visits of investment managers of Underlying Funds, having periodic meetings and/or conference calls with the investment managers of the Underlying Funds and analysing the legal documents of the Underlying Funds.

In addition to the above, the Manager may give preference to Underlying Funds for which the Manager has an increased level of risk oversight, including Underlying Funds also being managed by the Manager. The Manager will also look to invest in Underlying Funds which have a low cost such as passive index-tracking funds, for example ETF products..

The Fund may from time to time invest up to 30% of its Net Asset Value in deposits and hold cash for ancillary purposes provided that no more than 10% of the Net Asset Value of the Fund (or up to 20% booked on account with the Depositary subject to and in accordance with Schedule II of the Prospectus) may be held by a single credit institution.

Any Fund assets directly held by the Fund (i.e. not held through Underlying Funds) will be listed or traded on Recognised Markets as set out in Schedule I of the Prospectus entitled "Recognised Markets". For the avoidance of doubt, Underlying Funds which are exchange traded must be traded or listed on Recognised Markets.

The Fund may also invest directly up to 10% of its Net Asset Value in exchange traded commodities ("ETCs") being instruments that give investors indirect exposure to commodities in the form of certificates or debt securities. ETCs can be bought or sold on exchanges, they track the price movements of commodities – such as oil, gold and silver or a basket of commodities – and fluctuate in value based on the underlying commodity(ies).

Underlying Funds

The Underlying Funds that the Fund may invest in shall be UCITS or other investment funds that are eligible for investment by a UCITS. No more than 30% of the Fund's Net Asset Value may be invested in alternative investment funds ("AIFs") in aggregate, therefore the primary focus will be investment in UCITS domiciled in the EU, in particular Ireland and Luxembourg. Any investment in alternative investment funds will be required to meet the Central Bank's requirements and will be domiciled in Ireland, in a Member State of the EEA, the United States of America, Jersey, Guernsey or the Isle of Man. The aggregate maximum management fees that may be charged by the Underlying Funds in which the Fund may invest will not exceed 2% of such Underlying Fund's net asset value. Further information on the Underlying Funds is available in the section titled "Underlying Funds" in the Prospectus. The Fund may invest its entire portfolio in Underlying Funds that share the same Manager.

Phase 3: After the Target Date

At the Target Date, it is expected (subject to the Manager's discretion as disclosed above) that the Fund will be fully invested in the Longer Term Strategies.

This gradual exposure of Shareholders to the Longer Term Strategies allows Shareholders obtain a diversified exposure to the market while neutralizing the effect of short-term price fluctuations in the broader market.

Financial Derivative Instruments ("FDI")

Where considered appropriate, the Fund may use listed and/or over the counter ("OTC") FDI for hedging, risk reduction, or investment purposes. The expected effect of the use of FDI will be to enhance returns and/or reduce inherent risks affecting the Fund's investments. For information in relation to the risks associated with the use of FDI, please refer to the "Risk Factors" section of the Prospectus.

Types of Financial Derivative Instruments

(i) futures contracts on dividends, bonds, interest rates, equity securities/basket of equity securities, equity/fixed income indices, or basket of equity/fixed income indices;
(ii) forwards on currencies and/or bonds;
(iii) listed or OTC option contracts on (i) currencies, (ii) interest rates and/or bonds, equity securities/basket of equity securities, equity/fixed income indices/basket of equity/fixed income indices, (iii) futures;
(iv) swaps (which can include total return swaps, interest rate swaps (IRS), inflation swaps, inflation-linked swaps, volatility swaps, credit default swaps on issuers/basket of issuers, on indices or on a basket of indices) and interest rate swaptions; and
(v) total return swap on bonds/equity securities/basket of equity securities, equity/fixed income indices/ basket of equity/fixed income indices, currencies and commodities.

Index Derivatives

The Fund may take exposure to one or more indices through the use of the instruments listed at (i) –(v) above, provided that any such exposure/index will comply with the conditions and limits set down in the Central Bank's guidance titled "UCITS Financial Indices". It is not possible to identify the specific indices that the Fund may take exposure to (which may change from time-to-time), however, the underlying assets of such indices will be the above-mentioned investments that the Fund may gain exposure to in accordance with its investment policy. The Manager does not intend to use indices that rebalance more frequently than monthly, such rebalancing is not expected to have a material effect on the costs incurred within the index, and will be in accordance with the Central Bank UCITS Regulations. When indices to which the Fund obtains an exposure do not comply with the diversification requirements established by the UCITS Regulations, the Fund will apply a "look-through" approach which allows the Manager to analyse the Fund's exposure to the particular indices by looking through the derivative position which gives the Fund the relevant indirect exposure to the underlying indices. This allows the Fund to ensure that it meets the risk spreading requirements of the UCITS Regulations. Following this "look through" analysis, if the Fund's exposure to a particular index exceeds the permitted investment restrictions, the Fund will have to address this by reducing said exposure. The indices, if any, that the Fund takes exposure to, will be included in the financial statements of the ICAV and details of the indices, including details of websites where additional information can be obtained, will be available upon request from the Manager.

Futures, Options and forwards on currencies

The Fund may sell futures, sell call options or buy put options on bonds in order to seek to protect the Fund against interest rate increases. Taking these actions, the Fund may reduce the duration of the Fund's bond portfolio exposure. Interest rate risk is concerned with a fall in the value of a bond or portfolio of bonds due to an increase in interest rates. As interest rates rise, bond prices fall and vice versa. The longer the duration of a bond portfolio, the greater the interest rate risk. Selling futures and/or call options on bonds as well as buying put options on bonds has the effect of reducing the duration of a bond's portfolio. For instance, buying put options on bonds, gives the right, but not the obligation, to the holder to profit from an increase in interest rates. The Fund may engage in an interest rate swap transaction with the same purpose.

The Fund may sell futures, sell call options or buy put options on equities, equity indices or a basket of equity indices in order to provide an efficient, liquid and effective method for the management of risks by "locking in" gains and/or protecting against future declines in value. When the Fund is using futures in these circumstances, the Fund would be taking a short position for risk reduction.

The Fund may buy futures, buy call options or sell put options on bonds in order to gain additional exposure to interest rates. Taking such actions, the Fund may increase the duration of the Fund's bond portfolio exposure. Buying futures and/or call options on bonds as well as selling put options on bonds has the effect of increasing the overall duration of a bond's portfolio. A call option gives the holder the right to benefit from a rise interest rates. Similarly, buying futures contracts on bonds has the effect of increasing the duration of a bond portfolio. The value of a futures contract on bonds increases as interest rates fall, in the same way as the value of a

bond rises as interest rates fall. The Fund may engage in an interest rate swap transaction with the same purpose This strategy can be used in order to seek to protect the Fund against a financial crisis which could negatively affect corporate bond prices but positively affect government bond prices.

The Fund may buy futures or buy call options on equities indices and/or equity securities in order to gain additional exposure to equity markets, and to enhance performance and/or to manage equity market risk to reflect a view on the future direction of the market or index, to achieve a risk reward position, for yield enhancement, to lock an arbitrage profit (i.e. the purchase and sale of an asset in order to profit from a difference in the asset's price between markets whilst ensuring that prices do not deviate substantially from fair value for long periods of time), to change the nature of a liability and/or to modify the portfolio risk without incurring large transaction costs.

The Fund may use futures and/or put options on equities and/or equity indices in order to hedge the equity market exposure of securities and/or assets, and, in general, in order to hedge or reduce the overall equity market risk of the Fund's investment.

The Fund may also use dividend futures (i.e a forward contract traded on an exchange which allows investors to take a long or short position on the amount of dividends paid by a company to its shareholders for a specific maturity date in the future) in order to hedge its dividend exposure or express a view on the dividend markets e.g. the Fund may believe that a company's future dividend payment expectations are too high or too low and can decide to take a position in dividend futures to express its views.

Further to the above, the Fund may use Options on futures (i.e. option contracts that give the right, but not the obligation, to buy or sell a particular futures contract at a specific price on or before a certain expiration date) for hedging, risk reduction and investment purposes. For example, the Fund may look to get an exposure to an uncorrelated market to diversify risk, hedge existing positions to limit risk or invest in more volatile markets at a reduced cost.

The Fund may also use options and forwards on currencies ("FX forwards") to hedge the currency exposures of the Fund such as instruments denominated in a currency other than Euro (where relevant). The Fund may also use FX forwards and/or options to hedge or reduce the Fund's overall exchange rate risk and/or to alter the currency characteristics of instruments held by the Fund where the Manager considers it appropriate to retain the credit quality of a particular instrument but wishes to obtain a currency exposure consistent with the Fund's investment objective. FX forwards and options may also be used in order to enhance performance and/or to manage exchange rate risk to reflect the Manager's view on the future direction of the relevant currencies, to achieve a desired risk/reward position or for yield enhancement and/or to modify the portfolio risk without incurring large transaction costs. When FX forwards are used in the manner described above, the Fund would be taking short positions in order to hedge and/or reduce riskas described in detail in this paragraph.

Forwards

The Fund may use forwards contracts to hedge against downward movements in the value of the Fund's portfolio of investments (i.e. the Fund may enter into forwards to sell or buy investments at a fixed price thereby establishing a floor on the price at which investments may in the future be purchased or disposed), either by reference to investments or markets to which the Fund may be exposed to. This allows the Fund to mitigate the risk of price fluctuation of assets which the Fund may hold or which the Fund may wish to buy.

Interest Rate Futures and Interest Rate Swaps

The Fund may use interest rate futures or interest rate swaps in order to hedge fixed interest rates into floating rates or vice versa, or to manage a change in interest rates and/or to obtain or preserve a desired return or spread. They can also be used in combination with futures contracts or government bonds to take a position on a pure credit risk trade, stripping out the directional component of the future or the bond contract, and/or to obtain or preserve a desired return or spread. When interest rate futures or swaps are used in the manner described above, the Fund would be taking short positions in order to hedge, reduce risk and/or enhance the yield of the Fund.

Interest Rate Swaption

The Fund may use interest rate swaptions (i.e. an option on a swap agreement that gives the buyer the right, but not the obligation, to enter into an interest rate swap on a specified future date in exchange for paying a market – based premium) in order to seek to protect the Fund against interest rate increases, reflecting the

Manager's view on the future direction of interest rates. Interest Rate Swaptions may also be used by the Fund to terminate or extend an existing swap.

Inflation Swaps

An inflation swap operates in a similar way to an interest rate swap except that it is an agreement negotiated between two parties to exchange payments at a fixed or floating rate in return for payments based on realised inflation over the relevant period. Inflation swaps can allow the inflation sensitivity profile of the Fund to be changed more efficiently than through the use of physical cash markets. They may also be used to express views on the future level of inflation.

Inflation-linked Swaps

The Fund may use inflation-linked swaps to manage the inflation exposure and/or to mitigate the impact of inflation rate fluctuations on the Fund's portfolio. Unlike inflation swaps that involve exchange of payments at a fixed or floating rate in return for payments based on realized inflation, inflation-linked swaps involve payments that are directly tied to an inflation index, such as the Consumer Price Index (CPI).These payments adjust automatically in response to changes in the inflation rate. This mechanism provides the Fund with a dynamic tool to mitigate the impact of inflation rate fluctuations on the portfolio and to adapt its exposure based on anticipated inflation movements. Inflation-linked swaps may also be used to express views on the future level of inflation.

FX Volatility Swaps

The Fund may use FX Volatility Swaps to take advantage of or protect against potential extreme volatility in currencies. Volatility Swaps involve the exchange of forward contracts on the future realised volatility of a given underlying asset and allow the Fund to take positions on the volatility of that underlying asset.

Credit Default Swaps ("CDS")

The Fund may buy or sell CDS on issuers/basket of issuers, on indices or on a basket of indices in order to hedge or to reduce the credit risk of the portfolio, or to manage the Fund's credit exposures to certain instruments and/or to obtain or preserve a desired return or spread. Buying a CDS allows the Fund to protect itself against the default of an underlying instrument by transferring credit risk to a counterparty. As a CDS seller, the Fund receives a fixed rate of income throughout the term of the contract, provided that there is no default event of the underlying reference issuer. If the Fund sells a CDS in this way and there is a default event in respect of the underlying reference issuer, the Fund would have to pay the buyer of the CDS the difference between the notional amount (i.e. the full face value) of the CDS contract and the underlying reference asset's market value in the aftermath of the default (i.e.
€100 minus the recovery value of the underlying reference asset).

TRS

The Fund may use TRS on instruments held pursuant to the investment policy of the Fund in order to hedge the Fund's portfolio, reduce the risk of the portfolio, or for investment purposes. A TRS is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Up to 250% of the Fund's assets on a gross basis may be subject to TRS on the financial instruments outlined in the Fund's investment objective and policy and it is expected that, in general, 0%-100% of the Fund's assets may be subject to total return swaps.

General Financial Derivatives Instrument provisions

All counterparties of the Fund to FDI will comply with the requirements set down in Regulation 8 of the Central Bank UCITS Regulations (as may be amended from time to time). The OTC counterparty to any FDI entered into by the Fund will have no discretion over the composition or management of the Fund's portfolio or over the underlying of any of the abovementioned FDI.

Collateral Management

The Fund may be fully collateralised in different transferable securities and money market instruments issued or guaranteed by any Member State, or one of its local authorities, or a public international body to which one or more Member States belong provided that the relevant securities are from at least six different issues and no single issue shall make up more than 30% of the Fund's net asset value. All assets received by the Fund as collateral in the context of the use of FDI will comply with the criteria for the receipt of such collateral set down by the Central Bank, as further detailed under the section of the Prospectus headed "Collateral Policy".

Long/Short Exposure

The Fund may as part of its investment strategy hold short positions (taken only synthetically through derivatives). The expected maximum level of long derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund. The expected maximum level of short derivative positions which the Fund may hold is 200% of its Net Asset Value, measured on a gross basis using the sum of notionals of the derivatives held by the Fund.

Risk Measurement – Global Exposure and Leverage

Market risk created through the use of derivatives will be measured daily using the relative value-at-risk (VaR) approach. VaR is a risk measurement technique designed to estimate the potential loss in the Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Fund's portfolio is calculated daily and is measured relative to the VaR of the MSCI World Information Technology Index (the "Index"), an index which the Manager considers is a comparable benchmark to the Fund's portfolio. The Index is an equity index designed to represent the performance of large and mid-cap technology stocks across developed markets. In compliance with the UCITS Regulations, the relative VaR of the Fund's portfolio shall not exceed twice the Index, as determined at least daily using a one-tailed confidence interval of 99%, a holding period of one month (20 Business Days) and an historical observation period of at least one year (250 Business Days) unless a shorter observation period is justified by a significant increase in price volatility, such as in extreme market conditions.

The level of gross leverage, calculated based on the sum of the absolute value of notionals of the derivatives used, in accordance with the requirements of the Central Bank, is expected to be 350% of the Fund's Net Asset Value. There is a possibility of higher leverage levels than this expected level. The expected level of leverage is calculated based on the sum of the absolute value of notionals of the derivatives used, does not take into account any netting and hedging arrangements and therefore is not a risk-adjusted method of measuring leverage.

Investor Profile
The Fund is suitable for both institutional and retail investors seeking capital appreciation over the long term and who wish to receive income up to the Target Date and who are willing to accept a moderate to high level of volatility.

SFDR Classification: Article 6 Fund.

SFDR Disclosure

The investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the Fund as an Article 6 Fund means that the Fund does not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risk associated with the Fund's underlying investments, the Manager is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition (see definition of Sustainability Risk in the main body of the Prospectus). While the Manager integrates Sustainability Risk into the Fund's investment decision making process as described below, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions of the Manager in respect of the underlying investments which the Fund may buy and/or hold. Accordingly, the Manager may buy and/or hold underlying investments which may expose the Fund to high or low levels of Sustainability Risk.

The Fund integrates Sustainability Risk into its investment decision making process as summarised below:

(i) Prior to acquiring investments on behalf of the Fund, the Manager uses Sustainability Risk metrics of a third party data service provider in order to assess the relevant investment against Sustainability Risk factors and to identify how vulnerable the investment is to such risks; and

(ii) The Manager also assesses whether or not the Underlying Fund manager applies any basic exclusion policy (whereby potential investments are removed from the Underlying Fund investment universe on the basis that they pose a too great Sustainability Risk).

It has been determined that the Fund may have a higher prospect of being impacted by Sustainability Risk given that the Fund does not promote environmental or social characteristics nor does it have Sustainable Investment as its investment objective. To the extent that a Sustainability Risk occurs, there may be a sudden, material negative impact on the value of an investment, and hence there may be a material negative impact on the Net Asset Value of the Fund. Such negative impacts may result in an entire loss of value of an investment. The Manager acknowledges that the Fund's exposure to Sustainability Risks is changeable and shall keep the Fund's exposure to these risks under periodic review. Where the Manager considers, as a result of such a review, that the Fund's approach to the management of sustainability risks is to materially change, these disclosures will be updated accordingly.

It is possible that an assessment of Sustainability Risk may influence a decision by the Manager to not make an investment, or to dispose of an existing investment that would otherwise be considered as attractive to invest in or retain when confining the factors considered to financial-related elements such as financial position, revenue, capital structure.

Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosures" for further information.

Base Currency: Euro.

Offer of Shares
The following Classes of Shares are available for subscription:

Share Class	Initial Offer Price	Initial Offer Period	Currency Denomination and Hedged Class		Sales Charge	Minimum Initial Subscription and Minimum Subsequent Subscription	Distribution Type
Class A Dist	€100	From 31 August 2026 to 31 August 2026	Euro	No	No	€100 / €100	Distributing
Class A1 Dist	€100	From 31 August 2026 to 31 August 2026	Euro	No	No	€5,000,000 / €100	Distributing
Class L Dist	€100	From 31 August 2026 to 31 August 2026	Euro	No	Up to 1%	€100 / €100	Distributing
Class I Dist	€100	From 31 August 2026 to 31 August 2026	Euro	No	No	€1,000,000 / €100	Distributing
Class J Dist	€10,000	From 31 August 2026 to 31 August 2026	Euro	No	No	€1,000,000 / €100	Distributing
Class P Dist	€10,000	From 31 August 2026 to 31 August 2026	Euro	No	No	€1,000 / €100	Distributing
Class A Acc	€100	From 31 August 2026 to 31 August 2026	Euro	No	No	€100 / €100	Accumulating

Class L Acc	€100	From 31 August 2026 to 31 August 2026	Euro	No	Up to 1%	€100 / €100	Accumulating

During the initial offer period Shares are available for subscription at the initial offer price as indicated in the table above. Where the initial offer period has closed, Shares will be available at the prevailing Net Asset Value of each Class of Shares.

Fees and Expenses

Fees and expenses are payable out of the assets of the Fund and details of how Fees are accrued and paid, and details of other general management and fund charges, are set out in the Prospectus under the heading "Fees and Expenses".

Manager's Fee
The Manager shall be entitled to a fee of up to 1.50 % per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Administrator's Fee
Up to 0.3% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Depositary's Fee
Up to 0.2% per annum (plus VAT, if any) of the Net Asset Value of each Class of Shares.

Sales Charge
Up to 1% of the value of the gross subscription except in respect of an Underlying Fund which is managed, directly or by delegation, by the Manager or by any other entity with which the Manager is linked by common management or control, or by a substantial direct or indirect holding; in which case, in order to avoid double-charging, either (i) the Underlying Fund will waive any sales charge, or (ii) any sales charge will be waived in respect of the Fund. In respect of scenario (ii) above, the principle of equal and fair treatment of the investors will at all times be met by the Fund in accordance with the Central Bank UCITS Regulations.

If a sales charge is incurred, Shareholders should view their investment as medium to long-term.

Establishment Costs
The costs of establishing the Fund, obtaining approval from any authority, filing fees, the preparation and printing of this Supplement, marketing costs and the fees of all professionals relating to it, which are estimated not to exceed €25,000 will be borne by the Fund and amortised over the first five years of the Fund's operation (or such other period as may be determined by the Directors in their discretion).

Risk Factors

The attention of investors is drawn to the section headed "Risk Factors" in the Prospectus.
