Invesco Euro Cash 3 Months UCITS ETF Acc

PEU

Fund objective

The Invesco Euro Cash 3 Months UCITS ETF Acc aims to provide the total return performance of the FTSE Eurozone Government Bill 0-6 Month Capped Index (EUR) (the "Reference Index"), less the impact of fees.

An investment in this fund is an acquisition of units in a passively managed, index tracking fund rather than in the underlying assets owned by the fund.

Investment risks

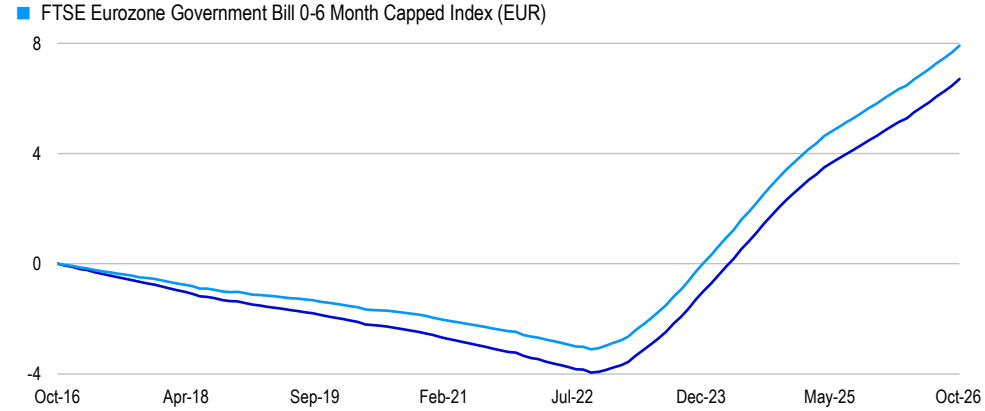

For complete information on risks, refer to the legal documents. The value of investments and any income will fluctuate (this may partly be the result of exchange rate fluctuations) and investors may not get back the full amount invested. The Fund may be exposed to the risk of the borrower defaulting on its obligation to return the securities at the end of the loan period and of being unable to sell the collateral provided to it if the borrower defaults. The Fund might be exposed to a limited number of positions which might result in greater fluctuations in the value of the Fund than for a fund that is more diversified.

About the index

The Reference Index only includes actively quoted Eurozone countries sovereign bills (Selected Bills), but the weight of each bill reflects the total size of each country's bill market as listed on the MTS Platform (whether quoted or not) and falling in the correct maturity range. The FTSE Government Bill Indices measure the total return of a portfolio of sovereign bills issued by eurozone countries and listed on the MTS bond platform. In the 0-6 months maturity bucket, each issuer within the Index is weighted by market capitalisation and capped to a maximum of 34.5%. Coupons paid out on any bond in an index portfolio are reinvested overnight in the index itself without deduction of any withholding tax. The Reference Index is priced using live quotes from the MTS inter-dealer platform and rebalanced every calendar week.

Source: Invesco, Bloomberg L.P., FactSet. Index/Benchmark performance is shown in the index/benchmark currency. ETF performance shown is calculated with reference to the Net Asset Value, inclusive of net reinvested income and net of ongoing charges and portfolio transaction costs, in EUR. The figures do not reflect the actual share price, the impact of the bid/offer spread or broker commissions. Returns may increase or decrease as a result of currency fluctuations. ETF NAV performance differs from that of the index due to the ongoing charges and portfolio transaction costs and due to the fact that the ETF does not necessarily always hold all the securities in the index in their respective weighting. This ETF does not charge an entry fee.

Glossary

Benchmark: An index against which the ETF is measured, in terms of relative performance, risk and other useful comparisons.

Distribution Yield: The distribution yield is a measurement of cash flow being paid. It's the sum of the distributions over 12 months divided by the net asset value (NAV) of the fund.

Effective Duration: Effective Duration is a measure of the potential impact on a bond's (or a portfolio of bonds) price of a 1% change in interest rates, across all maturities. This measure takes into account the possible changes in expected bond cash flows for bonds with embedded optionality (for example, the bond issuer's right to redeem bonds at a pre-determined price on certain dates) due to the 1% change in interest rates.

ETF: Exchange traded fund. A type of fund that is traded on the stockmarket like ordinary shares. ETFs can be bought and sold during trading hours, like ordinary shares, whereas other types of funds are priced once a day only.

Factors: An investment approach that seeks to identify and invest in securities that display certain quantifiable characteristics. Common examples of factors include Value, Quality and Momentum. A factor strategy may seek to target just one factor or combine multiple factors.

Hedged: The intended result of reducing the portfolio's exposure to a specific risk, such as the risk of fluctuations between currency exchange rates ("currency hedging").

Investment Grade: Refers to the quality of a company's credit. To be considered an investment grade issue, the company must be rated at 'BBB' or higher by a recognized credit rating agency. Companies with an investment grade credit rating are generally considered to be lower risk than those with sub investment grade ratings, also known as high yield issuers.

ISA: Individual Savings Account. A type of investment account in the UK in which the tax on income is lower than usual, and there is no tax on profits made from an increase in the value of shares.

Physical Replication: Physical funds invest directly in constituents of the benchmark index.

Replication Method: Strategy employed by the fund to achieve its objective.

SIPP: Self-Invested Pension Plan. A type of UK pension for which a person makes their own investment decisions.

UCITS: Undertakings for Collective Investment in Transferable Securities. European regulatory framework for an investment vehicle that can be marketed across the European Union.

UK Reporting Status: Indicates whether or not the fund has United Kingdom fund tax status, this can lead to a UK investor

receiving favourable tax rates on any gain or disposal of holdings in the fund.

US Treasuries: US Treasury bonds are government debt securities issued by the US Federal government.

Yield To Maturity: The rate of the return anticipated on a bond if it is held until the maturity date.

Yield To Worst (YTW): is the most conservative measure of yield that can be received on a bond assuming that it doesn't default on its payments.For a callable bond, it will be the lower of the yield to maturity (YTM) or yield to call (YTC).

Yield to Call (YTC): is the yield on a callable bond that assumes a bond is called by the issuer at the earliest opportunity.
