**Unless otherwise stated, Performance, Portfolio Breakdowns and Net Assets information as at: 31-Oct-2026. All other data as at 05-Nov-2026.**

**This document is marketing material**. For Investors in Switzerland. Investors should read the KIID/PRIIPs document and prospectus prior to investing, and should refer to the prospectus for the funds full list of risks.

## FUND OVERVIEW

The Fund seeks to track the performance of an index composed of selected companies from developed countries that, in the aggregate, have lower volatility characteristics relative to the broader developed equity markets.

## KEY BENEFITS

1. Diversified exposure to developed companies and seeks to minimise the market's peaks and valleys
2. Direct investment in a broad range of developed world companies
3. International market exposure with lower volatility characteristics

## RISK INDICATOR

**Lower Risk** — Potentially Lower Rewards

**Higher Risk** — Potentially Higher Rewards

**CAPITAL AT RISK:** The value of investments and the income from them can fall as well as rise and are not guaranteed. Investors may not get back the amount originally invested.

## KEY RISKS:

- The value of equities and equity-related securities can be affected by daily stock market movements. Other influential factors include political, economic news, company earnings and significant corporate events.
- Index Methodology Risk: Although the benchmark index aims to seek exposure to securities with low volatility characteristics from within the Parent Index, there is no guarantee that this objective will be achieved.
- Factor Focus Risk: Indices with a factor focus are less diversified than their parent index because they have predominant exposure to a single factor rather than the multiple factor exposure of most indices. Therefore they will be more exposed to factor related market movements. Investors should consider this Fund as part of a broader investment strategy.
- Volatility risk: The Fund tracks an index comprising securities with lower volatility historically. “Minimum volatility” in the Fund’s name refers to its underlying index exposure and not to its trading price. There is no guarantee that the trading price of its shares on exchanges will have low volatility
- Counterparty Risk: The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Share Class to financial loss.

The figures shown relate to past performance. **Past performance is not a reliable indicator of future performance. Markets could develop very differently in the future. It can help you to assess how the fund has been managed in the past** Performance is shown on a Net Asset Value (NAV) basis, with gross income reinvested where applicable. Performance data is based on the net asset value (NAV) of the ETF which may not be the same as the market price of the ETF. Individual shareholders may realize returns that are different to the NAV performance. The return of your investment may increase or decrease as a result of currency fluctuations if your investment is made in a currency other than that used in the past performance calculation.
