The information is required by law to help you understand the nature and the risks of investing in this fund. You are advised to read it so you can make an informed decision about whether to invest.

Xtrackers ESG USD Emerging Markets Bond Quality Weighted UCITS ETF

Share class: 1D, ISIN: IE00BD4DX952, Security code: A144GB, Currency: USD

a sub-fund of Xtrackers (IE) plc. The management company is DWS Investment S.A., a member of the DWS Group.

Objectives and investment policy

The fund is passively managed. The fund aims to reflect the performance of the iBoxx MSCI ESG USD Emerging Markets Sovereigns Quality Weighted Index (index). The index is designed to represent the performance of a range of US dollar (USD) currency denominated tradable debt (bonds) issued by governments or central banks in emerging market countries. The index also takes into consideration the MSCI ESG Government Ratings for selection and weighting purposes. The MSCI ESG Government Ratings which are sourced from MSCI ESG Research LLC Environmental, Social and Governance standards (ESG) criteria, assess a country's exposure to and management of environmental, social and governance risk and explain how these factors might impact the long-term sustainability of its economy. Bonds issued by countries with favourable fundamental economic indicators and higher MSCI ESG Government Ratings will have higher representation in the index compared to countries with weaker economic fundamental indicators and lower MSCI ESG Government Ratings. Bonds are only eligible for inclusion in the index if they meet certain pre-determined selection and eligibility criteria. They must have a minimum rating of "B", when rated by only one rating agency, or a composite rating of "B" when rated by

more than one rating agency. All eligible emerging market countries are attributed scores derived from fundamental economic indicators such as: gross domestic product (GDP) growth, rate of inflation, national reserves as a percentage of GDP, national debt as a percentage of GDP and a percentage of exports, default history and global competitiveness of the country. The scores are then used to determine the level of representation that bonds issued by each country will have in the index. The index is calculated on a total return gross basis, meaning all distributions paid by the issuers of the bonds are treated as being reinvested. The index is rebalanced on a monthly basis and country weightings are re-allocated every three months. To achieve the aim, the fund will attempt to replicate the index, before fees and expenses, by buying a portfolio of securities that may comprise the constituents of the index or other unrelated investments as determined by DWS entities. The fund may employ techniques and instruments in order to manage risk, reduce costs and improve results. These techniques and instruments may include the use of derivatives. The currency of the fund is USD. The fund distributes up to four times per annum. You may request the redemption of shares generally on a daily basis.

Risk and reward profile

The calculation of the risk and reward profile is based on simulated data that cannot be used as a reliable indicator for the future risk profile. This risk indicator is subject to changes; the classification of the fund may change over time and cannot be guaranteed. Even a fund that is classified in the lowest category (category 1) does not represent a completely risk-free investment. The fund is classified in category 4 because its share price fluctuates and the likelihood of both losses and gains may therefore be relatively high. The following risks could be of particular significance for the fund: The fund will attempt to replicate the index. However, exceptional circumstances may arise, such as, but not limited to, disruptive market conditions, additional costs/taxes or extremely volatile markets, which may cause the fund's performance to be substantially different from the performance of the index. DWS entities and related companies may act in several roles in relation to the fund such as distributor and management company which may involve conflicts of interest. The fund is not guaranteed and your investment is at risk. The value of your investment may go down as well as up. The fund is exposed to less economically developed economies (known as emerging markets) which involve greater risks than well developed economies. Political unrest and economic downturn may be more likely and will affect the value of your investment. Markets in bonds may at times become volatile or illiquid. This means that ordinary trading activity may occasionally be disrupted or impossible. The index may be affected, and your

investment may suffer a consequent loss. Fluctuations in interest rates of the currency of the shares, the index or the other assets of the fund may affect the value of your investment. The fund invests in non-investment grade bonds which generally have a higher risk of default and are more susceptible to market fluctuations than investment grade bonds. This may affect the value of your investment. The fund follows a rules-based strategy which will deviate from the overall market or parent index performance. Your investment may be less diversified, with no guarantee that the strategy will be achieved. Bonds are exposed to credit risk and interest rate risk. Credit risk means that there is a risk that the bond issuer may be unable to pay interest or repay the bond principal, resulting in your investment suffering a loss. Interest rate risk means that if interest rates rise, typically the value of the bond will fall, which could also affect the value of your investment. The environmental, social and governance screening criteria are embedded with the index selection process, which seeks to exclude bonds issued by companies involved in certain activities. The investment manager and sub-portfolio manager are not responsible for monitoring the screening process or confirming that all bonds which pass the screening process are issued by companies with adequate environmental, social or governance standards. The fund may have exposure to a small number of investments or have exposure to a few countries, or issuers. This can make the share price of the fund fluctuate significantly. The fund may use derivatives to try to manage its investments more efficiently. This may not always be successful and may result in greater fluctuations in the value of the fund. This may negatively affect the value of the fund and your investment.

A more detailed description of risks and other general information can be found in the risk section(s) of the prospectus.

Charges

The charges you pay are used to pay the costs of running the fund, including the costs of marketing and distributing it. These charges reduce the potential growth of your investment.

One-off charges taken before or after you invest	
Entry charge	None
Exit charge	None
This is the maximum that might be taken out of your money before it is invested (entry charge) and before the proceeds of your investment are paid out (exit charge).	
Charges taken from the fund over a year	
Ongoing charges	0.45 %
Charges taken from the fund under certain specific conditions	
Performance fee	None

Secondary market investors (those who buy or sell shares on a stock exchange) may be charged certain fees by their stock broker. These charges, if any, can be obtained from such stock broker. Authorised participants dealing directly with the fund will pay the transaction costs related to their subscriptions and redemptions.

The ongoing charges shown here are a cost estimate. It excludes portfolio transaction costs and performance fees, if any.

Additional information on costs can be found in the cost section(s) of the prospectus.

Past performance

Past performance is not a reliable indicator of future performance. All costs and fees that were withdrawn from the 1D share class of Xtrackers ESG USD Emerging Markets Bond Quality Weighted UCITS ETF were deducted during the calculation. The 1D share class of Xtrackers ESG USD Emerging Markets Bond Quality Weighted UCITS ETF was launched in 2016.

— As of 26 February 2021 the fund changed its investment objective to reflect the performance of the iBoxx MSCI ESG USD Emerging Markets Sovereigns Quality Weighted Index. The past performance shown from 2016 up to 2020 (inclusive), is that of the Markit iBoxx USD Emerging Markets Sovereigns Quality Weighted Index.
