INDEX DESCRIPTION:

The Index is composed of shares of European companies whose financial statements indicate strong Momentum based on fundamental data and an optimization methodology designed to capture the performance generated by the Momentum factor, while taking into account an Environmental, Social and Governance (ESG) criteria (reduction of carbon emission, human capital, corporate governance etc.). Hence, companies involved in disputable activities, subject to significant violations of the principles of the United Nations Global Compact or companies that have been involved in serious controversies related to the ESG are excluded from the index. The type of approach implemented here is Best-in-class (Best-in-class approach identifies leaders in each sector based on the best environmental, social and governance (ESG) practices, while avoiding those that present high levels of risk and do not comply with minimum ESG standards). The extra-financial strategy of the Index, carried out at each step of the investment process, may comprise methodological limitations such as the risk related to ESG investment or the Index rebalancing. Further information on the Index, its composition, calculation and rules for periodical review and rebalancing and on the general methodology behind the BNP Paribas indices can be found on <https://indx.bnpparibas.com>.

GLOSSARY

Tracking Error

The tracking error measures the volatility of a portfolio's relative return in relation to its benchmark index.

Volatility

An asset's volatility is the standard deviation of its return. As a measure of dispersion, it evaluates the uncertainty of asset prices, which is often equated to their risk. Volatility can be calculated ex post (retrospectively) or estimated ex ante (anticipatively).
