\* Source : Amundi. The above cover complete periods of 12 months for each calendar year. Past performance is no predictor of current and future results and does not guarantee future yield. Any losses or gains do not take into consideration any costs, commissions and fees incurred by the investor in the issue and buyout of the shares (e.g. taxes, brokerage fees or other commissions deducted by the financial intermediary). If performance is calculated in a currency other than the euro, any losses or gains generated can thereby be affected by exchange rate fluctuations (both upward and downward). The discrepancy accounts for the performance difference between the portfolio and the index.

## Objective and Investment Policy

The Lyxor STOXX Europe 600 Industrial Goods & Services UCITS ETF - Acc is a UCITS compliant exchange traded fund that aims to track the benchmark index STOXX Europe 600 Industrial Goods & Services Net Return EUR.

## Risk & Reward Profile (SRR) (Source: Fund Admin)

Lower risk, potentially lower rewards  
 Higher risk, potentially higher rewards

The SRR represents the risk and return profile as presented in the Key Investor Information Document (KIID). The lowest category does not imply that there is no risk. The SRR is not guaranteed and may change over time.

It is important for potential investors to evaluate the risks described below and in the fund prospectus which can be found on [www.lyxoretf.com](http://www.lyxoretf.com)

**CAPITAL AT RISK** : ETFs are tracking instruments: Their risk profile is similar to a direct investment in the Underlying Index. Investors' capital is fully at risk and investors may not get back the amount originally invested.

**REPLICATION RISK** : The fund objectives might not be reached due to unexpected events on the underlying markets which will impact the index calculation and the efficient fund replication.

**COUNTERPARTY RISK** : Investors are exposed to risks resulting from the use of an OTC Swap with MORGAN STANLEY BANK AG, SOCIETE GENERALE. In-line with UCITS guidelines, the exposure to the counterparty cannot exceed 10% of the total fund assets. Physically replicated ETFs may have counterparty risk resulting from the use of a Securities Lending Programme.

**UNDERLYING RISK** : The Underlying Index of a Lyxor ETF may be complex and volatile. When investing in commodities, the Underlying Index is calculated with reference to commodity futures contracts exposing the investor to a liquidity risk linked to costs such as cost of carry and transportation. ETFs exposed to Emerging Markets carry a greater risk of potential loss than investment in Developed Markets as they are exposed to a wide range of unpredictable Emerging Market risks.

**CURRENCY RISK** : ETFs may be exposed to currency risk if the ETF is denominated in a currency different to that of the Underlying Index they are tracking. This means that exchange rate fluctuations could have a negative or positive effect on returns.

**LIQUIDITY RISK** : Liquidity is provided by registered market-makers on the respective stock exchange where the ETF is listed. On-exchange liquidity may be limited as a result of a suspension in the underlying market represented by the Underlying Index tracked by the ETF; a failure in the systems of one of the relevant stock exchanges, The market-maker systems; or an abnormal trading situation or event.

### Risk indicators (Source: Fund Admin) \*

	1 year	3 years
<b>Portfolio volatility</b>	21.12%	21.12%
<b>Benchmark volatility</b>	21.12%	21.11%
<b>Ex-post Tracking Error</b>	0.08%	0.07%
<b>Portfolio sharpe ratio</b>	0.44	0.85

\* Volatility is a statistical indicator that measures an asset's variations around its average value. For example, market variations of +/- 1.5% per day correspond to a volatility of 25% per year.

The Tracking Error represents the annualised volatility of the performance differences between the ETF and the benchmark
