Any losses or gains do not take into consideration any costs, commissions and fees incurred by the investor in the issue and buyout of the shares (e.g. taxes, brokerage fees or other commissions deducted by the financial intermediary). If performance is calculated in a currency other than the euro, any losses or gains generated can thereby be affected by exchange rate fluctuations (both upward and downward). The discrepancy accounts for the performance difference between the portfolio and the index.

Carbon footprint

Carbon footprint: carbon emissions per euro million invested

Total carbon portfolio footprint (Index/Parent index) :

Parent Index	PTF
-	227.49

Parent index :

Carbon footprint

This indicator measures the portfolio's carbon emissions in metric tonnes of carbon equivalent (tCO2e) per euro million invested. This is an indicator of the emissions generated by investment in this portfolio.

Definition of scopes :

- **Scope 1** : all emissions that arise directly from sources that are owned or controlled by the company.
- **Scope 2** : all indirect emissions generated by the purchase or production of electricity, steam or heat.
- **Scope 3** : all other indirect emissions, both upstream and downstream in the value chain. To ensure the robustness of the data, in this report we have chosen to use only part of scope 3, i.e. upstream emissions linked to first-tier suppliers. First-tier suppliers are those with which the company has a strong relationship and on which it can exercise direct influence.

Source : The carbon emissions data is supplied by Trucost. It corresponds to companies' annual emissions expressed in tCO2e, which covers the six greenhouse gases defined in the Kyoto protocol whose emissions are converted into global warming potential (GWP) in CO2 equivalent.
