5 - SWING PRICING

Swing Pricing is a mechanism that aims to protect the existing Shareholders from dilution of value caused by trading costs incurred as a result of subscription and redemption activity on a Sub-Fund on a particular day.
The mechanism is applied at the Sub-Fund level to all the Share Classes (except shares denominated as UCITS ETF and EXF shares) and is not meant to address specific circumstances of each individual investor. The Sub-Funds apply Full Swing Pricing, that means that Swing Pricing will be applied in any given Business Days where there is subscription and/or redemption activity on the specific Sub-Funds.
The Sub-Fund's NAV will be adjusted in order to reduce the effect of dilution on that Sub-Fund. These adjustments will seek to reflect the actual prices of the underlying transactions, based on estimated dealing spreads, costs, and other market and trading considerations.
The NAV will be adjusted upward when there is net inflows into the Sub-Fund and downward when there is net outflow into the Sub-Fund. Any such adjustment will be applied to all the subscriptions and redemptions on this Dealing Day.
For any given Business Day the adjustment will normally not be larger than 2% of the NAV, but the Board of Directors can raise this limit when necessary to protect the interests of Shareholders.

Sub-funds were in scope of the Swing Pricing Mechanism	Sub-funds were swung as at 31 March 2026
